## **Equilibria And Dynamics Of Gas Adsorption On Heterogeneous Solid Surfaces:**

**Equilibria and Dynamics of Gas Adsorption on Heterogeneous Solid Surfaces** W.A. Steele, G. Zgrablich, W. Rudzinski, 1996-12-17 The fact that the surfaces of real solids are geometrically distorted and chemically non uniform has long been realized by the scientists investigating various phenomena occurring on solid surfaces Even in the case when diffraction experiments show a well organized bulk solid structure the surface atoms or molecules will usually exhibit a much smaller degree of surface organization In addition to the results obtained from electron diffraction this can be seen in the impressive images obtained from STM and AFM microscopies This geometric and chemical disorder is the source of the energetic heterogeneity for molecules adsorbing on real solid surfaces Hundreds of papers have been published showing that this heterogeneity is a major factor in determining the behaviour of real adsorption systems Studies of adsorption on energetically heterogeneous surfaces have proceeded along three somewhat separate paths with only minor coupling of ideas One was the study of adsorption equilibria on heterogeneous solid surfaces The second path was the study of time evolution of adsorption processes such as surface diffusion or adsorption desorption kinetics on heterogeneous surfaces and the third was the study of adsorption in porous solids or more generally adsorption in systems with limited dimensions The present monograph is a first attempt to provide a synthesis of the ways that surface geometric and energetic heterogeneities affect both the equilibria and the time evolution of adsorption on real solids The book contains 17 chapters written by a team of internationally recognized specialists some of whom have already published books on adsorption *Scientific and Technical Aerospace Reports*, 1995 **The Cumulative Book Index**, 1998 A world list of books in the English language

Brown, 1957 **Technical Abstract Bulletin**, 1965 **Hydrodynamics and Mass Transfer in Downflow Slurry Bubble Columns** Subrata Kumar Majumder, 2019-01-02 Slurry bubble column reactors are intensively used as a multiphase reactor in the chemical biochemical and petrochemical industries for carrying out reactions and mass transfer operations in which a gas made up of one or several reactive components comes into contact or reacts with a liquid This volume describes the hydrodynamics of three phase gas liquid solid flow in a downflow slurry bubble column The efficiency of the downflow gas interacting system is characterized by the self entrainment of secondary gas The book covers the gas entrainment phenomena gas holdup characteristics pressure drop gasliquid mixing characteristics bubble size distribution interfacial phenomena and the mass transfer phenomena in the downflow slurry system This volume will be useful in chemical and biochemical industries and in

industrial research and development sectors as well as in advanced education courses in this area The book will be helpful for further understanding the multiphase behavior in gas interacting multiphase systems for research and development The hydrodynamic and mass transfer characteristics discussed will be useful in the design and installation of the modified slurry bubble column in industry for specific applications *Proceedings of the Japan Academy Nihon Gakushuin*,2004

I. Aristov,2020-03-02 This book presents the first ever comprehensive survey of a new family of nanocomposite sorbents salt in porous matrix CSPMs These composites have recently been developed for selective sorption of water alcohols ammonia and carbon dioxide They owe their origin to the catchy idea of target oriented tailoring of materials with predetermined adsorption properties harmonized with a particular adsorption process The book develops the concept of target oriented synthesis and suggests tools for tailoring new adsorbent materials adapted to multiple practical applications It describes properties of approximately 50 new CSPMs of water alcohols ammonia and carbon dioxide including the data obtained in the author s laboratory and literature available by the end of 2018 These data can be used for engineering calculations and analysis of practical applications The book also discusses potential applications of these sorbents for storage and transformation of low temperature heat gas drying maintenance of relative humidity in museums and regeneration of heat and moisture in ventilation systems American Doctoral Dissertations ,1998 Circular - National Bureau of Standards United States.
