Equilibrium And Dynamics:

Equilibrium and Dynamics Mukul Majumdar, 1992-06-18 Over the last 40 years Professor David Gale has played a leading role in developing two themes of fundamental importance to economic theory As a tribute to his creative research this volume contains contributions from some leading researchers who explore different directions in these areas

Far-from-equilibrium Dynamics Yasumasa Nishiura, 2002 When different scales exist in the spatial direction it produces non uniformity that is frequently characterized by identifiable patterns This monograph investigates the dynamics of spatio temporal patterns created by the coexistence of different scales Of particular concern is how the loss of uniformity requires the fixing of particular scales that cause the loss of the global picture of the system Singular perturbation theories are discussed as a way out of that dilemma Various methodologies for studying dissipative systems from the standpoint of separation and unification of scales are presented The interface dynamics caused by the difference of spatial scales is also given a prominent place in the discussion Translated from the 1999 Japanese work Hisenkei mondai 1 Patan keisei no suri Annotation copyrighted by Book News Inc Portland OR

Meta-Ecosystem Dynamics Frederic Guichard, Justin Marleau, 2021-09-25 This book presents current meta ecosystem models and their derivation from classical ecosystem and metapopulation theories Specifically it reviews recent modelling efforts that have emphasized the role of nonlinear dynamics on spatial and food web networks and which have cast their implications within the context of spatial synchrony and ecological stoichiometry It suggests that these recent advances naturally lead to a generalization of meta ecosystem theories to spatial fluxes of matter that have both a trophic and non trophic impact on species Ecosystem dynamics refers to the cycling of matter and energy across ecological compartments through processes such as consumption and recycling Spatial dynamics established its ecological roots with metapopulation theories and focuses on scaling up local ecological processes through the limited movement of individuals and matter Over the last 15 years theories integrating ecosystem and spatial dynamics have quickly coalesced into meta ecosystem theories the focus of this book The book will be of interest to graduate students and researchers who wish to learn more about the synthesis of ecosystem and spatial dynamics which form the foundation of the theory of meta ecosystems

Chaotic Dynamics Alfredo Medio, Giampaolo Gallo, 1992 The modelling of economic models by means of dynamic systems

The Elements and Dynamic Systems of Economic Growth and Trade Models Bjarne S. Jensen, 2025-04-15 This updated and expanded book examines the fundamentals of economic growth models as expressed by dynamic systems of nonlinear differential equations With homogeneous dynamic systems as the unifying mathematical framework the time paths and long run stability properties of the solutions to classical neoclassical and modern macroeconomic growth models are analyzed The general structure and solutions of two sector and multi sector growth models are also explored with special attention given to the evolution of output compositions and sectoral factor allocations involved in Walrasian general equilibrium dynamics Ramsey optimal growth saving models with variable

intertemporal substitution non homothetic utility are discussed to demonstrate the ability to generate a realistic historically observed evolution of economic per capita growth rates and saving rates The book aims to highlight how basic economic growth models can be extended widely including international trading economies world market prices commodity trade patterns and issues related to globalization migrations and international factor movements It will be relevant to students and researchers interested in economic growth and trade policy

Dynamic Macroeconomics with Imperfect Competition Leo Kaas,2012-12-06 This thesis was stimulated throughout the time of my participation in a research project on Dynamic Macroeconomics supported by the German Research Foundation DFG The starting point was the central question of how to integrate price setting firms in a dynamic disequilibrium model Almost all recent literature on imperfect competition in macroeconomics applies the objective demand approach by assuming that firms know the true demand curve they are faced with While this approach can be applied in temporary monetary equilibrium models it proves inadequate for formulating price adjustment in a dynamic disequilibrium model where it has to be replaced by the concept of subjective demand Based on this distinction the thesis starts out with a comparison of the concepts of subjective and objective demand in an abstract framework and surveys the literature on general equilibrium theory with imperfect competition The objective demand approach is criticized not only on the grounds of its strong rationality requirements and existence problems but also by the observation that it cannot be applied successfully to characterize determinate rational expectations equilibria in intertemporal macroeconomics Finally price setting firms using subjective demand functions are integrated in a dynamic disequilibrium model in order to study monopolistic and oligopolistic price adjustment

Structure and Physics of Viruses Mauricio G. Mateu,2024-12-31 The second edition of this book provides a completely updated account of the structure dynamics and physics of viral particles from the moment they emerge by self assembly from viral components produced in the infected cell through their extracellular stage until they recognize and infect a new host cell and cease to exist as they lose their physical integrity to

initiate a new infectious cycle New insights into the structure of viruses their physical properties and mechanisms of action derived from results obtained in the last decade have been included as well as other bio physical techniques to study the structure or dynamics of virus particles and components These include among many others new advances in high resolution electron cryomicroscopy novel approaches in the use of electron cryotomography or the application of soft X ray tomography to study viruses in the infected cell high speed atomic force microscopy to study virus assembly and dynamics and the development of new antiviral drugs and vaccines as well as of many nanomedical and nanotechnological applications of virus particles New chapters on the study of viruses inside infected cells and on technological applications of modified viral particles have been included in this second edition The book is still aimed primarily at Master s students Ph D students and postdoctoral researchers with degrees in biology chemistry physics or related scientific disciplines who have an interest in or are working with viruses It provides an up to date overview of many important concepts techniques studies and applications in structural and physical virology for specialized researchers working with viruses regardless of their field of specialization covering the latest research together with fundamental concepts and well established facts In short this book is basic enough to be used by undergraduate and Ph D students but advanced and up to date enough for experienced scientists with an interest in structural and or physical virology
