Type Simon Loxley,2006-03-31 Type is the bridge between writer and reader between thought and understanding Type is the message bearer an art form that impinges upon every literate being and yet for most of its history it has conformed to the old adage that good typography should be invisible it should not distract with its own personality It was only at the end of the nineteenth century that designers slowly realised that they could say as much with their lettering as writers could with their words Form of course carries as much meaning as content Now anyone within reach of a computer and its limitless database of fonts has the same power Type The Secret History of Letters tells its story for the first time treating typography as a hidden measure of our history From the tempestuous debate about its beginnings in the fifteenth century to the invention of our most contemporary lettering Simon Loxley with the skill of a novelist tells of the people and events behind our letters How did Johann Gutenberg in late 1438 come to think of printing Does Baskerville have anything to do with Sherlock Holmes Why did the Nazis re-invent Blackletter What is a Zapf Type is a guide through the history of our letters and a study of their power From fashion through propaganda and the development of mass literacy Loxley shows how typography has changed our world **The APHA Letter** ,1982 **The Book Collector** ,1990 *Wood Engraving & the Woodcut in Britain, C.1890-1990* James Hamilton,1994 This book traces the history of xylography the art of wood engravings and woodcut

Before the foundation of academies of art in London in 1758 and Philadelphia in 1805 most individuals who were to emerge as artists trained in workshops of varying degrees of relevance Easel painters began their careers apprenticed to carriage house sign or ship painters whilst a few were placed with those who made pictures Sculptors emerged from a training as ornamental plasterers or carvers Of the many other trades in a position to offer an appropriate background were limning staining engraving surveying chasing and die sinking In addition plumbers gained the right to use oil painting and for plasterers the application of distemper was an extension of their trade Central to the theme of this book is the notion that for those who were to become either painters or sculptor a training in a trade met their practical needs This training was of an altogether different nature to an education in an art school In the past prospective artists were offered by means of apprenticeships an empirical rather than a theoretical understanding of their ultimate vocation James Ayres provides a lively account of the inter relationship between art and trade in the late seventeenth to early nineteenth centuries in both Britain and North America He demonstrates with numerous illustrated examples the many cross overs in the art and mystery of artistic training and to modern eyes the sometimes incongruous relationships between the various trades that contributed to the blossoming of many artistic careers including some of the most illustrious names of the long eighteenth century
