description of the game a classification of the gaming events and the applicable probability calculations The primary goal of this work is to allow the reader to quickly find the odds for a specific gaming situation in order to improve his or her betting gaming decisions Every type of gaming event is tabulated in a logical consistent and comprehensive manner The complete methodology and complete or partial calculations are shown to teach players how to calculate probability for any situation for every stage of the game for any game Here readers can find the real odds returned by precise mathematical formulas and not by partial simulations that most software uses Collections of odds are presented as well as strategic recommendations based on those odds where necessary for each type of gaming situation The book contains much new and original material that has not been published previously and provides great coverage of probabilities for the following games of chance Dice Slots Roulette Baccarat Blackjack Texas Hold em Poker Lottery and Sport Bets Most of games of chance are predisposed to probability based decisions This is why the approach is not an exclusively statistical one like many other titles published on this subject but analytical every gaming event is taken as an individual applied probability problem to solve A special chapter defines the probability based strategy and mathematically shows why such strategy is theoretically optimal
