Geological Survey Professional Paper ,1949 *The Projective Heat Map* Richard Evan Schwartz,2017-04-20 This book introduces a simple dynamical model for a planar heat map that is invariant under projective transformations The map is defined by iterating a polygon map where one starts with a finite planar gon and produces a new gon by a prescribed geometric construction One of the appeals of the topic of this book is the simplicity of the construction that yet leads to deep and far reaching mathematics To construct the projective heat map the author modifies the classical affine invariant midpoint map which takes a polygon to a new polygon whose vertices are the midpoints of the original The author provides useful background which makes this book accessible to a beginning graduate student or advanced undergraduate as well as researchers approaching this subject from other fields of specialty The book includes many illustrations and there is also a companion computer program **Geological Survey Professional Paper** Geological Survey (U.S.),1967 **Oregon**

Expanding Thurston Maps Mario Bonk,Daniel Meyer,2017-11-28 This monograph is devoted to the study of the dynamics of expanding Thurston maps under iteration A Thurston map is a branched covering map on a two dimensional topological sphere such that each critical point of the map has a finite orbit under iteration It is called expanding if roughly speaking preimages of a fine open cover of the underlying sphere under iterates of the map become finer and finer as the

order of the iterate increases Every expanding Thurston map gives rise to a fractal space called its visual sphere Many dynamical properties of the map are encoded in the geometry of this visual sphere For example an expanding Thurston map is topologically conjugate to a rational map if and only if its visual sphere is quasisymmetrically equivalent to the Riemann sphere This relation between dynamics and fractal geometry is the main focus for the investigations in this work The book is an introduction to the subject The prerequisites for the reader are modest and include some basic knowledge of complex analysis and topology The book has an extensive appendix where background material is reviewed such as orbifolds and branched covering maps

Kumar,2012-12-06 Kac Moody Lie algebras \mathfrak{g} were introduced in the mid 1960s independently by V Kac and R Moody generalizing the finite dimensional semisimple Lie algebras which we refer to as the finite case The theory has undergone tremendous developments in various directions and connections with diverse areas abound including mathematical physics so much so that this theory has become a standard tool in mathematics A detailed treatment of the Lie algebra aspect of the theory can be found in V Kac's book Kac 90 This self contained work treats the algebro geometric and the topological aspects of Kac Moody theory from scratch The emphasis is on the study of the Kac Moody groups G and their flag varieties X/Y including their detailed construction and their applications to the representation theory of \mathfrak{g} In the finite case \mathfrak{g} is nothing but a semisimple Y simply connected algebraic group and X is the flag variety \mathfrak{g}/P_y for a parabolic subgroup $p_y \subset \mathfrak{g}$
