Flaps In Head And Neck Reconstruction:

Manual of Head and Neck Reconstruction Using Regional and Free Flaps Boban M Erovic, Piero Lercher, 2014-12-10 Ablative tumor surgery of the head and neck region often results in severe cosmetic and functional deformities. In these cases, microvascular free tissue transfer enables three-dimensional reconstruction of head and neck defects. The selection of adequate donor tissue and a profound knowledge of the human anatomy and the various harvesting techniques are paramount in ensuring successful reconstruction. Reflecting current surgical approaches, this book presents the most frequently used flaps in head and neck surgery, including detailed overviews as well as their respective pearls and pitfalls. Moreover, each section contains a synopsis and pre-operative checklist. The overlay technique merges high-quality photographs with drawings and precisely illustrates the step-by-step descriptions of the different flap harvesting techniques, making this manual in pocket size a unique and accessible reference for both doctors in training and specialists in the field of otolaryngology, head and neck plastic, maxillofacial and skull base surgery. **Free Flaps in Head and Neck**

Reconstruction Raul Pellini, Gabriele Molteni, 2019-11-21 This richly illustrated atlas provides a clear and comprehensive step-by-step description of surgical techniques for raising and setting free flaps from different donor sites to reconstruct damage to the head and neck caused by cancer and trauma. Adopting a highly practical approach, the book describes the indications and technical aspects of each procedure with sets of in vivo pictures clearly showing the surgical passages. In addition, it discusses microvascular techniques and explores different soft tissue perforator and bone flaps, including novel free tissue flaps presented for the first time in the head and neck field. This book offers invaluable insights into free flap harvesting and transferring techniques for both residents and experienced specialists in the field of otolaryngology, head and neck maxillofacial and plastic surgery. **Local and Regional Flaps in Head and Neck Reconstruction** Rui

Fernandes, 2014-10-15 Local and Regional Flaps in Head Neck Reconstruction: A Practical Approach provides comprehensive step-by-step instruction for flap raising and inset for the head and neck region. Ideal for oral and maxillofacial surgeons, facial plastic surgeons and head and neck surgeons, the book serves as a useful guide to planning reconstructive cases and an easily accessible reference prior to operation. Local and Regional Flaps in Head Neck Reconstruction is logically organized into 24 chapters, each focusing on a local or regional flap or a special site reconstruction. Chapters focused on a particular flap will begin with a detailed description of the relevant anatomy and discuss potential applications of the flap before moving into a detailed step-by-step description of how to elevate and transfer the flap to the defect site. Potential complications will also be addressed. Well illustrated with more than 800 clinical photographs and with a website featuring surgical procedures, this book is an ideal reference for those new to practice and experts alike. **Atlas of Regional and Free Flaps for Head and Neck Reconstruction** Mark L. Urken, Mack L. Cheney, Keith E. Blackwell, Jeffrey R. Harris, Tessa A. Hadlock, Neal Futran, 2012-01-05 This Atlas depicts in a clear manner the use of regional skin, muscle and

musculocutaneous flaps as well as donor sites from distant regions of the body where vascularized skin muscle bone and nerves can be harvested and transferred to the head and neck Otolaryngologists plastic surgeons and general surgeons use both regional and free flaps to reconstruct damage to the head and neck caused by cancer and trauma This Atlas provides the surgeon with techniques for mastering different donor sites needed to find solutions to virtually every reconstruction problem It provides detailed descriptions of the anatomy and harvesting techniques of the major regional and free flap donor sites currently employed in head and neck reconstruction

Cutaneous Flaps in Head and Neck Reconstruction

Vasilios K. Thomaidis,2014-05-21 This textbook containing a plethora of illustrations and pictures will serve as an atlas and as a superb guide to the use of cutaneous flaps in head and neck reconstruction Each chapter depicts in a layered manner the anatomy of a particular donor site from which flaps are derived and used in head and neck defects providing systematic steps in understanding the topographical anatomy of the various tissue layers The flaps derived from each donor site are presented in detail with step by step instructions in flap design and harvesting techniques based in anatomy The author uses numerous high quality color illustrations drawn from his own practice in order to demonstrate the techniques His combined expertise as a maxillofacial surgeon and an assistant professor of anatomy enables him to explain clearly the transition from basic science anatomy to applied anatomy and to document reconstructive surgical techniques in precise detail This beautifully illustrated book including many basic and advanced flap designs will be an illuminating reference for all who treat defects in the head and neck area

 Anastasiya Quimby, Sat Parmar, Rui Fernandes, 2023-10-04 Head and neck patients who undergo treatment with free tissue
 transfer are patients with some of the most complex perioperative needs Due to nature of the defects reconstructive surgery
 is complex and often is the only available option offering an acceptable quality of life Therefore successful recovery of these
 patients is of paramount importance Whilst the surgery itself is of utmost importance insufficient or inappropriate pre
 surgical work up and post operative care may lead to reconstructive failures Secondary reconstruction offers less optimal
 functional outcomes and may add to patient morbidity due to additional surgeries being required This book serves as a
 comprehensive source of information related to the pre intra and postoperative care of head and neck patients It fills a
 critical need for a single source that addresses all aspects of perioperative management of head and neck patients *Local*
