Ephemeral Territories:

Ephemeral Territories Erin Manning, 2003 **Methods and Nations** Michael J. Shapiro, 2004 Shapiro seeks to bring recognition to forms of political expression that have existed on the margins of the nationhood practices of states and the complicit nation sustaining conceits of social science **Making Commons Dynamic** Prateep Kumar Nayak, 2021-03-01 With an emphasis on the challenges of sustaining the commons across local to global scales **Making Commons Dynamic** examines the empirical basis of theorising the concepts of commonisation and decommonisation as a way to understand commons as a process and offers analytical directions for policy and practice that can potentially help maintain commons as commons in the future Focusing on commonisation decommonisation as an analytical framework useful to examine and respond to changes in the commons the chapter contributions explore how natural resources are commonised and decommonised through the influence of multi level internal and external drivers and their implications for commons governance across disparate geographical and temporal contexts It draws from a large number of geographically diverse empirical cases 20 countries in North South and Central America and South and South East Asia They involve a wide range of commons related to fisheries forests grazing wetlands coastal marine rivers and dams aquaculture wildlife tourism groundwater surface freshwater mountains small islands social movements and climate The book is a transdisciplinary endeavour with contributions by scholars from geography history sociology anthropology political studies planning human ecology cultural and applied ecology environmental and development studies environmental science and technology public policy Indigenous tribal studies Latin American and Asian studies and environmental change and governance and authors representing the commons community NGOs and policy Contributors include academics community members NGOs practitioners and policymakers Therefore commonisation decommonisation lessons drawn from these chapters are well suited for contributing to the practice policy and theory of the commons both locally and globally **Southwestern Region Amendment of Forest Plans to Include Northern Goshawk and Mexican Spotted Owl Direction [AZ,NM]** ,1995 **Territory** David Delaney, 2008-04-15 This short introduction conveys the complexities associated with the term territory in a clear and accessible manner It surveys the field and brings theory to ground in the case of Palestine A clear and accessible introduction to the complexities associated with the term territory Provides an interdisciplinary survey of the many strands of research in the field Addresses specific areas including interpretations of territorial structures the relationship between territoriality and scale the validity and fluidity of territory and the practical social processes associated with territorial re configurations Stresses that our understanding of territory is inseparable from our understanding of power Uses Israel Palestine as an extended illustrative case study The author s strong legal and geographical background gives the work an authoritative perspective *Ephemeral Territories* Erin Manning, 2000 *Alien Capital* Iyko Day, 2016-03-11 In *Alien Capital* Iyko Day retheorizes the history and logic of settler colonialism by examining its intersection with capitalism and the racialization of

Asian immigrants to Canada and the United States Day explores how the historical alignment of Asian bodies and labor with capital's abstract and negative dimensions became one of settler colonialism's foundational and defining features This alignment allowed white settlers to gloss over and expunge their complicity with capitalist exploitation from their collective memory Day reveals this process through an analysis of a diverse body of Asian North American literature and visual culture including depictions of Chinese railroad labor in the 1880s filmic and literary responses to Japanese internment in the 1940s and more recent examinations of the relations between free trade national borders and migrant labor In highlighting these artists reworking and exposing of the economic modalities of Asian racialized labor Day pushes beyond existing approaches to settler colonialism as a Native settler binary to formulate it as a dynamic triangulation of Native settler and alien populations and positionalities

Animate Literacies Nathan Snaza, 2019-08-16 In *Animate Literacies* Nathan Snaza proposes a new theory of literature and literacy in which he outlines how literacy is both constitutive of the social and used as a means to define the human Weaving new materialism with feminist queer and decolonial thought Snaza theorizes literacy as a contact zone in which humans nonhuman animals and nonvital objects such as chairs and paper all become active participants In readings of classic literature by Kate Chopin Frederick Douglass James Joyce Toni Morrison Mary Shelley and others Snaza emphasizes the key roles that affect and sensory experiences play in literacy Snaza upends common conceptions of literacy and its relation to print media showing instead how such understandings reinforce dehumanizations linked to dominant imperialist heterosexist and capitalist definitions of the human The path toward disrupting such exclusionary humanist frameworks Snaza contends lies in formulating alternative practices of literacy and literary study that escape disciplined knowledge production

Solar Photosphere: Structure, Convection, and Magnetic Fields Jan Olof Stenflo, 2012-12-06 Solar and stellar photospheres constitute the layers most accessible to observations forming the interface between the interior and the outside of the stars The solar atmosphere is a rich physics laboratory in which the whole spectrum of radiative dynamical and magnetic processes that transfer energy into space can be observed As the fundamental processes take place on very small spatial scales we need high resolution observations to explore them On the other hand the small scale processes act together to form global properties of the sun which have their origins in the solar interior The rapid advances in observational techniques and theoretical modelling over the past decade made it very timely to bring together scientists from east and west to the first IAU Symposium on this topic The physics of the photosphere involves complicated interactions between magnetic fields convection waves and radiation During the past decade our understanding of these generally small scale structures and processes has been dramatically advanced New instrumentations on ground and in space have given us new means to study the granular convection Diagnostic methods in Stokes polarimetry have allowed us to go beyond the limitations of spatial resolution to explore the structure and dynamics of the subarcsec magnetic structures Extensive numerical simulations of the interaction between convection and magnetic fields using powerful supercomputers

are providing deepened physical insight Granulation magnetic fields and dynamo processes are being explored in the photospheres of other stars guided by our improved understanding of the solar photosphere Illustrated Glossary for Solar and Solar-Terrestrial Physics A. Bruzek, C.J. Durrant, 2012-12-06 At the XV General Assembly of the International Astronomical Union in Sydney 1973 Commission 10 for Solar Activity requested the incoming Organising Committee to establish a small group to recommend a standard nomenclature for solar features and to prepare an illustrated text which would clear the jungle of terms for the benefit of solar physicists as well as of theoreticians and research workers in related fields The challenge was taken up by the president of Commission 10 Prof K O Kiepenheuer and his persuasive advocacy has led eventually to the present book In the course of the work the declared aim but not the basic purpose was revised Rather than prepare a list of standard terms we have preferred to collect together all the terms that appear in current English language literature Synonyms and partially overlapping terms are all recorded for the most part without prejudice Each has been defined as exactly as possible with the hope that in the future they may be used and understood without ambiguity It would be a step on the road to standardisation if these terms were not re used for new phenomena New observations and new theories will lead to reappraisals and redefinitions so the Glossary is intended more as a guide to the present situation than as a rule book Energy Research Abstracts ,1977 **The Solar Activity Cycle** André Balogh, Hugh Hudson, Kristóf Petrovay, Rudolf Steiger, 2015-04-16 A collection of papers edited by four experts in the field this book sets out to describe the way solar activity is manifested in observations of the solar interior the photosphere the chromosphere the corona and the heliosphere The 11 year solar activity cycle more generally known as the sunspot cycle is a fundamental property of the Sun This phenomenon is the generation and evolution of magnetic fields in the Sun's convection zone the photosphere It is only by the careful enumeration and description of the phenomena and their variations that one can clarify their interdependences The sunspot cycle has been tracked back about four centuries and it has been recognized that to make this data set a really useful tool in understanding how the activity cycle works and how it can be predicted a very careful and detailed effort is needed to generate sunspot numbers This book deals with this topic together with several others that present related phenomena that all indicate the physical processes that take place in the Sun and its exterior environment The reviews in the book also present the latest theoretical and modelling studies that attempt to explain the activity cycle It remains true as has been shown in the unexpected characteristics of the first two solar cycles in the 21st century that predictability remains a serious challenge Nevertheless the highly expert and detailed reviews in this book using the very best solar observations from both ground and space based telescopes provide the best possible report on what is known and what is yet to be discovered Originally published in Space Science Reviews Vol 186 Issues 1-4 2014 **Solar Surface Magnetism** R. J. Rutten, C.J. Schrijver, 2012-12-06 Observations of the solar magnetic field are largely confined to the radiation emitted from the photosphere the thin layer of the solar atmosphere which we call the solar surface It is from solar surface observations

that we must infer the internal structure and the internal magnetohydrodynamic processes that lead to the multitude of fascinating phenomena of solar magnetic activity and from solar surface observations we must also infer the interplay of convection and magnetism that regulates field dispersal drives the heating of the outer atmospheric plasma and generates the solar wind There is much to be learned from solar surface magnetism in physics and astrophysics currently there are rapid developments in this exciting field The workshop of which this volume contains the proceedings aimed at a synthesis between observers and theorists both with regard to the discrete elements that are the building blocks of solar magnetism and with regard to the larger scale spatial and temporal patterns in which the magnetic elements emerge and disappear The workshop was held during November 15 1993 in Soesterberg The Netherlands The fifty participants took a very active part in making the workshop quite a lively one The articles in these proceedings cover most of the oral and poster presentations excepting a dozen soon to be published elsewhere

Birds of Two Worlds Russell Greenberg, Peter P. Marra, 2005-05-02 For centuries biologists have tried to understand the underpinnings of avian migration where birds go and why why some migrate and some do not how they adapt to a changing environment and how migratory systems evolve Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton's classic work *Migrant Birds in the Neotropics* In 1992 Hagan and Johnston published a follow up book *Ecology and Conservation of Neotropical Migrant Landbirds* In *Birds of Two Worlds* Russell Greenberg and Peter Marra bring together the world's experts on avian migration to discuss its ecology and evolution The contributors move the discussion of migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior Readers interested in the biology behavior ecology and evolution of birds have waited a decade to see a worthy successor to the earlier classics *Birds of Two Worlds* will complete the trilogy and become indispensable for ornithologists evolutionary biologists serious birders and public and academic libraries

Eruptions on the Sun Boris Filippov, 2024-06-28 This book is devoted to eruptive phenomena on the Sun the most dangerous sources of space weather disturbances It discusses the latest achievements in this field described in the scientific literature and obtained by the author himself The initial chapters of the book give a brief description of the role of the Sun in the life and history of mankind a general description of the solar interior and the atmosphere of the Sun the causes and drivers of solar activity and its impact on the Earth's environment and human life The book provides a detailed description of eruptive phenomena on the Sun a review of observations of solar activity and theoretical ideas about the mechanisms and causes of a sudden release of energy in the solar atmosphere Much attention is paid to the solar magnetic fields their characteristic features and measured values in the photosphere the observed manifestations in the chromosphere and corona and methods for extrapolating photospheric data to the upper layers of the solar atmosphere It is assumed that the magnetic field is the source of energy suddenly released during eruptive phenomena observed in the form of flares prominence eruptions and coronal mass ejections CMEs Energy is accumulated

and stored in the non potential associated with electric currents part of the coronal magnetic field free magnetic energy This part of the field is the most variable and can provide energy for fast eruptive processes CMEs propagating through the interplanetary medium significantly perturb it and cause the strongest geomagnetic storms when they affect the Earth's magnetosphere The prediction of the arrival of the CME is the key problem of the entire space weather forecast Thus pre eruptive conditions in CME source regions are of great importance Solar prominences and filaments are considered the most likely progenitors of CMEs Most of the book is devoted to the description and analysis of their equilibrium and stability It is shown that there are measurable characteristics of the proximity of the prominence to the instability threshold which can be very useful in the problem of space weather forecasting The book contains many illustrations and links to the latest scientific articles and reviews on the topic It will be useful to researchers in the field of astrophysics solar physics geophysics as well as PhD and graduate students

Reports on Astronomy 2006-2009 (IAU XXVIIA) Karel A. van der Hucht, 2009-03-23 The Transactions XXVIIA Reports on Astronomy 2006 2009 provides a comprehensive and authoritative review of what has been achieved in astronomy during the years 2006 to 2009 These insightful and up to date reviews have been written by the presidents and chairpersons of the IAU scientific bodies the Divisions the Commissions and the Working Groups Topics covered in this wide ranging volume include fundamental astronomy the Sun and heliosphere planetary sciences stars variable stars interstellar matter the Galactic system galaxies and the Universe optical and infrared techniques radio astronomy space and high energy astrophysics and other IAU activities The reviews have been written at a level suitable for colleagues in the same fields but will also be useful for students and researchers wishing to gain an overview of astronomical fields beyond their own research area

Heliophysics: Evolving Solar Activity and the Climates of Space and Earth Carolus J. Schrijver, George L. Siscoe, 2010-09-23 Heliophysics is a fast developing scientific discipline that integrates studies of the Sun's variability the surrounding heliosphere and the environment and climate of planets Over the past few centuries our understanding of how the Sun drives space weather and climate on the Earth and other planets has advanced at an ever increasing rate This 2010 volume the last in this series of three heliophysics texts focuses on long term variability from the Sun's decade long sunspot cycle and considers the evolution of the planetary system over ten billion years from a climatological perspective Topics covered range from the dynamo action of stars and planets to processes in the Earth's troposphere ionosphere and magnetosphere and their effects on planetary climate and habitability Supplemented by online teaching materials it can be used as a textbook for courses or as a foundational reference for researchers in fields from astrophysics and plasma physics to planetary and climate science

Magnetic Fields in the Solar Atmosphere Jacques Maurice Beckers, 1976 This paper describes the magnetic field configurations observed in the solar atmosphere including the corona and the solar wind The techniques for observing solar magnetic fields are briefly reviewed The significance of Alfvén waves in transporting energy is stressed Author

Natural and Anthropogenic Disasters M.K. Jha, 2010-07-20 The major

challenges of the 21st century faced by human beings are how to achieve water security food security energy security and environmental security Owing to enhanced natural anthropogenic disasters worldwide these challenges become much more complicated and daunting especially for developing countries Therefore it is important to highlight the risk of different disasters as well as the modern tools and techniques for minimizing disaster incidence and losses Disaster management being highly multidisciplinary in nature a comprehensive book dealing with different aspects of disaster management and encompassing important disasters faced by humankind is presently not available This book is an attempt to fulfill this gap It provides clear comprehensive and up to date information about different facets of disaster management along with salient case studies The book highlights the current status of disaster management focusing on developing nations discusses vital issues such as climate change and sustainable development modern approaches and tools techniques and the challenges of and future R D needs for sustainable disaster management

Solar Magnetohydrodynamics E.R. Priest, 2012-12-06 I have felt the need for a book on the theory of solar magnetic fields for some time now Most books about the Sun are written by observers or by theorists from other branches of solar physics whereas those on magnetohydrodynamics do not deal extensively with solar applications I had thought of waiting a few decades before attempting to put pen to paper but one summer Josip Kleczek encouraged an immediate start while your ideas are still fresh The book grew out of a postgraduate lecture course at St Andrews and the resulting period of gestation or being with monograph has lasted several years The Sun is an amazing object which has continued to reveal completely unexpected features when observed in greater detail or at new wavelengths What riches would be in store for us if we could view other stars with as much precision Stellar physics itself is benefiting greatly from solar discoveries but in turn our understanding of many solar phenomena such as sunspots sunspot cycles the corona and the solar wind will undoubtedly increase in the future due to their observation under different conditions in other stars In the old days the solar atmosphere was regarded as a static plane parallel structure heated by the dissipation of sound waves and with its upper layer expanding in a spherically symmetric manner as the solar wind Outside of sunspots the magnetic field was thought to be unimportant with a weak uniform value of a few gauss
