Raess,1991-10-24 This comprehensive book is based on a series of excellent articles written by experts that review analyze and discuss a variety of compelling lines of evidence which point to the idea that the inhibitory capacity of the central nervous system represented by GABA mediated neurotransmission is altered in certain convulsive disorders Each chapter begins with specialized topical reviews to lay the foundation for the ensuing material Topics include the role of GABA in CNS function clinical aspects of the epilepsies involvement of GABA in models of epilepsy the rationale for the use of GABA mimetics as anticonvulsants future anticonvulsant therapy and much more **Drugs for the Control of Epilepsy** Carl L. Faingold,Gerhard H. Fromm,2019-06-04 Originally published in 1991 This book brings together the ideas of an international group of experts on clinical and experimental epilepsy These authors consider how antiepileptic drugs may act on elements of neuronal networks to reduce seizure incidence and severity The book addresses such topics as the four general classes of anticonvulsant drug mechanisms major epilepsy models the proposed mechanisms of action of major antiepileptic drugs and the clinical use of antiepileptic drugs in the treatment of various forms of human epilepsy This volume is special for its focus on the neuronal network approach to epilepsy as well as for its comprehensive review and integration of human and animal data Neurologists pharmacologists psychiatrists and other investigators actively working on epilepsy research will find this book to be a useful thought provoking reference volume Genetics of Epilepsy ,2014-09-04 The book chapters cover different aspects of epilepsy genetics starting with the classical concept of epilepsies as ion channel disorders The second part of the book gives credit to the fact that by now non ion channel genes are recognized as equally important causes of epilepsy The concluding chapters are designed to offer the reader insight into current methods in epilepsy research Each chapter is self contained and deals with a selected topic of interest Authors are the leading experts in the field of epilepsy research Book covers the most important aspects of epilepsy Interesting for both

Receptors Adam C. Errington,Giuseppe Di Giovanni,Vincenzo Crunelli,2014-09-22 GABA is the principal inhibitory neurotransmitter in the CNS and acts via GABAA and GABAB receptors Recently a novel form of GABAA receptor mediated inhibition termed tonic inhibition has been described Whereas synaptic GABAA receptors underlie classical phasic GABAA receptor mediated inhibition inhibitory postsynaptic currents tonic GABAA receptor mediated inhibition results from the activation of extrasynaptic receptors by low concentrations of ambient GABA Extrasynaptic GABAA receptors are composed of receptor subunits that convey biophysical properties ideally suited to the generation of persistent inhibition and are pharmacologically and functionally distinct from their synaptic counterparts This book highlights ongoing work examining the properties of recombinant and native extrasynaptic GABAA receptors and their preferential targeting by endogenous and clinically relevant agents In addition it emphasizes the important role of extrasynaptic GABAA receptors in GABAergic inhibition throughout the CNS and identifies them as a major player in both physiological and pathophysiological processes
