## **Equivariant Analytic Localization Of Group Representations:**

Equivariant Analytic Localization of Group Representations Laura Ann Smithies, 2001 This book is intended for graduate students and research mathematicians interested in topological groups Lie groups category theory and homological algebra

**From Representation Theory to Homotopy Groups** Donald M. Davis, 2002 A formula for the odd primary  $v_1$  periodic homotopy groups of a finite  $H$  space in terms of its  $K$  theory and Adams operations has been obtained by Bousfield This work applies this theorem to give explicit determinations of the  $v_1$  periodic homotopy groups of  $E_8/5$  and  $E_8/3$  thus completing the determination of all odd primary  $v_1$  periodic homotopy groups of all compact simple Lie groups a project suggested by Mimura in 1989

**Equivariant Orthogonal Spectra and  $\mathbb{S}\mathbb{S}$ -Modules** M. A. Mandell, J. Peter May, 2002 The last few years have seen a revolution in our understanding of the foundations of stable homotopy theory Many symmetric monoidal model categories of spectra whose homotopy categories are equivalent to the stable homotopy category are now known whereas no such categories were known before 1993 The most well known examples are the category of  $S$  modules and the category of symmetric spectra We focus on the category of orthogonal spectra which enjoys some of the best features of  $S$  modules and symmetric spectra and which is particularly well suited to equivariant generalization We first complete the nonequivariant theory by comparing orthogonal spectra to  $S$  modules We then develop the equivariant theory For a compact Lie group  $G$  we construct a symmetric monoidal model category of orthogonal  $G$  spectra whose homotopy category is equivalent to the classical stable homotopy category of  $G$  spectra We also complete the theory of  $S_G$  modules and compare the categories of orthogonal  $G$  spectra and  $S_G$  modules A key feature is the analysis of change of universe change of group fixed point and orbit functors in these two highly structured categories for the study of equivariant stable homotopy theory

The Submanifold Geometries Associated to Grassmannian Systems Martina Brück, 2002 This work is intended for graduate students and research mathematicians interested in differential geometry and partial differential equations

The  $\mathbb{A}\mathbb{B}\mathbb{S}$  Program in Geometric Analysis: Sharp Sobolev Inequalities and Related Problems Olivier Druet, Emmanuel Hebey, 2002 Function theory and Sobolev inequalities have been the target of investigation for many years Sharp constants in these inequalities constitute a critical tool in geometric analysis The  $\mathbb{A}\mathbb{B}$  programme is concerned with sharp Sobolev inequalities on compact Riemannian manifolds This text summarizes the results of contemporary research and gives an up to date report on the field

Noether-Lefschetz Problems for Degeneracy Loci Jeroen Spandaw, 2003 Studies the cohomology of degeneracy loci This title assumes that  $E \otimes F$  is ample and globally generated and that  $\psi$  is a general homomorphism In order to study the cohomology of  $Z$  it considers the Grassmannian bundle  $\pi: Y \rightarrow X$  of  $r$  dimensional linear subspaces of the fibre

Representation Theory and Complex Analysis Michael Cowling, 2008-02-27 Six leading experts lecture on a wide spectrum of recent results on the subject of the title They present a survey of various interactions between representation theory and harmonic analysis on semisimple groups and symmetric spaces and recall the

concept of amenability They further illustrate how representation theory is related to quantum computing and much more Taken together this volume provides both a solid reference and deep insights on current research activity

**Homotopy Theory of Diagrams** Wojciech Chachólski, Jérôme Scherer, 2002 In this paper the authors develop homotopy theoretical methods for studying diagrams In particular they explain how to construct homotopy colimits and limits in an arbitrary model category The key concept introduced is that of a model approximation A model approximation of a category  $\mathcal{C}$  with a given class of weak equivalences is a model category  $\mathcal{M}$  together with a pair of adjoint functors  $\mathcal{M} \rightleftarrows \mathcal{C}$  which satisfy certain properties The key result says that if  $\mathcal{C}$  admits a model approximation then so does the functor category  $\text{Fun}(\mathcal{I}, \mathcal{C})$

**Numerical Control over Complex Analytic Singularities** David B. Massey, 2003 Generalizes the Le cycles and numbers to the case of hyper surfaces inside arbitrary analytic spaces This book defines the Le Vogel cycles and numbers and prove that the Le Vogel numbers control Thom's  $\alpha_f$  condition It describes the relationship between the Euler characteristic of the Milnor fibre and the Le Vogel numbers

**Several Complex Variables with Connections to Algebraic Geometry and Lie Groups** Joseph L. Taylor, 2025-03-21 This text presents an integrated development of the theory of several complex variables and complex algebraic geometry leading to proofs of Serre's celebrated GAGA theorems relating the two subjects and including applications to the representation theory of complex semisimple Lie groups It includes a thorough treatment of the local theory using the tools of commutative algebra an extensive development of sheaf theory and the theory of coherent analytic and algebraic sheaves proofs of the main vanishing theorems for these categories of sheaves and a complete proof of the finite dimensionality of the cohomology of coherent sheaves on compact varieties The vanishing theorems have a wide variety of applications and these are covered in detail Of particular interest are the last three chapters which are devoted to applications of the preceding material to the study of the structure and representations of complex semisimple Lie groups Included are introductions to harmonic analysis the Peter Weyl theorem Lie theory and the structure of Lie algebras semisimple Lie algebras and their representations algebraic groups and the structure of complex semisimple Lie groups All of this culminates in Milnor's proof of the Borel-Weil-Bott theorem which makes extensive use of the material developed earlier in the text There are numerous examples and exercises in each chapter This modern treatment of a classic point of view would be an excellent text for a graduate course on several complex variables as well as a useful reference for the expert

**Group Actions and Equivariant Cohomology** Loring W. Tu, 2024-11-26 This volume contains the proceedings of the virtual AMS Special Session on Equivariant Cohomology held March 19-20, 2022 Equivariant topology is the algebraic topology of spaces with symmetries At the meeting equivariant cohomology was broadly interpreted to include related topics in equivariant topology and geometry such as Bredon cohomology equivariant cobordism GKM Goresky-Kottwitz and MacPherson theory equivariant K-theory symplectic geometry and equivariant Schubert calculus This volume offers a view of the exciting progress made in

these fields in the last twenty years Several of the articles are surveys suitable for a general audience of topologists and geometers To be broadly accessible all the authors were instructed to make their presentations somewhat expository This collection should be of interest and useful to graduate students and researchers alike

**The Lifted Root Number Conjecture and Iwasawa Theory** Jürgen Ritter, Alfred Weiss, 2002 This paper concerns the relation between the Lifted Root Number Conjecture as introduced in GRW2 and a new equivariant form of Iwasawa theory A main conjecture of equivariant Iwasawa theory is formulated and its equivalence to the Lifted Root Number Conjecture is shown subject to the validity of a semi local version of the Root Number Conjecture which itself is proved in the case of a tame extension of real abelian fields

**Topological Invariants for Projection Method Patterns** Alan Forrest, John Hunton, Johannes Kellendonk, 2002 This memoir develops discusses and compares a range of commutative and non commutative invariants defined for projection method tilings and point patterns The projection method refers to patterns particularly the quasiperiodic patterns constructed by the projection of a strip of a high dimensional integer lattice to a smaller dimensional Euclidean space In the first half of the memoir the acceptance domain is very general any compact set which is the closure of its interior while in the second half the authors concentrate on the so called canonical patterns The topological invariants used are various forms of K theory and cohomology applied to a variety of both C DEGREES algebras and dynamical systems derived from such a p

**The Based Ring of Two-Sided Cells of Affine Weyl Groups of Type  $\widetilde{A}_{n-1}$**  Nanhua Xi, 2002 In this paper we prove Lusztig s conjecture on based ring for an affine Weyl group of type  $\widetilde{A}_{n-1}$

On the Foundations of Nonlinear Generalized Functions I and II Michael Grosser, 2001 In part 1 of this title the authors construct a diffeomorphism invariant Colombeau type differential algebra canonically containing the space of distributions in the sense of L Schwartz Employing differential calculus in infinite dimensional convenient vector spaces previous attempts in this direction are unified and completed Several classification results are achieved and applications to nonlinear differential equations involving singularities are given

Some Generalized Kac-Moody Algebras with Known Root Multiplicities Peter Niemann, 2002 Starting from Borchers fake monster Lie algebra this text construct a sequence of six generalized Kac Moody algebras whose denominator formulas root systems and all root multiplicities can be described explicitly The root systems decompose space into convex holes of finite and affine type similar to the situation in the case of the Leech lattice As a corollary we obtain strong upper bounds for the root multiplicities of a number of hyperbolic Lie algebras including  $AE_3$

**The Rational Function Analogue of a Question of Schur and Exceptionality of Permutation Representations** Robert M. Guralnick, Peter Müller, Jan Saxl, 2003 Investigates the analogous question for rational functions This book describes the Galois theoretic translation based on Chebotarev s density theorem leads to a certain property of permutation groups called exceptionality

**Tilings of the Plane, Hyperbolic Groups and Small Cancellation Conditions** Milé Krajčevski, 2001 This book is intended for graduate students and research mathematicians interested in group theory and

generalizations      *On the Connection between Weighted Norm Inequalities, Commutators and Real Interpolation* Jesús Bastero, Mario Milman, Francisco J. Ruiz, 2001 Introduction Calderon weights Applications to real interpolation reiteration and extrapolation Other classes of weights Extrapolation of weighted norm inequalities via extrapolation theory Applications to function spaces Commutators defined by the K method Generalized commutators The quasi Banach case Applications to harmonic analysis BMO type spaces associated to Calderon weights Atomic decompositions and duality References

Connectivity Properties of Group Actions on Non-Positively Curved Spaces Robert Bieri, Ross Geoghegan, 2003  
 Generalizing the Bieri Neumann Strebel Renz Invariants this Memoir presents the foundations of a theory of not necessarily discrete actions  $\rho$  of a suitable group  $G$  by isometries on a proper CAT 0 space  $M$  The passage from groups  $G$  to group actions  $\rho$  implies the introduction of Sigma invariants  $\Sigma_k \rho$  to replace the previous  $\Sigma_k G$  introduced by those authors Their theory is now seen as a special case of what is studied here so that readers seeking a detailed treatment of their theory will find it included here as a special case We define and study controlled  $k$  connectedness  $CC_k$  of  $\rho$  both over  $M$  and over end points  $e$  in the boundary at infinity  $\partial_\infty M$   $\Sigma_k \rho$  is by definition the set of all  $e$  over which the action is  $k+1$  connected A central theorem the Boundary Criterion says that  $\Sigma_k \rho \subset \partial_\infty M$  if and only if  $\rho$  is  $CC_{k+1}$  over  $M$  An Openness Theorem says that  $CC_k$  over  $M$  is an open condition on the space of isometric actions  $\rho$  of  $G$  on  $M$  Another Openness Theorem says that  $\Sigma_k \rho$  is an open subset of  $\partial_\infty M$  with respect to the Tits metric topology When  $\rho$  of  $G$  is a discrete group of isometries the property  $CC_{k+1}$  is equivalent to  $\ker \rho$  having the topological finiteness property type  $F_k$  More generally if the orbits of the action are discrete  $CC_{k+1}$  is equivalent to the point stabilizers having type  $F_k$  In particular for  $k=2$  we are characterizing finite presentability of kernels and stabilizers Examples discussed include locally rigid actions translation actions on vector spaces especially those by metabelian groups
