Inorganic Particle Synthesis via Macro and Microemulsions Dibyendu Ganguli, Munia Ganguli, 2012-12-06

Nanotechnology is now very well known as one of the most important key technologies in science and industry. In the field of material science and engineering, nanoparticles should be unit materials as well as atoms and molecules to build ceramics, devices, catalysts, and machines, and the nanoparticle technology is thus attracting. This novel technology includes various methodologies for nanoparticles preparation, surface modification via chemical and/or physical treatments, immobilization and arrangement on supports or substrates to achieve high performance for luminescence properties in light emitting devices and high efficiency for catalytic and photocatalytic reactions in chemical synthesis, chemical decomposition, and artificial photosynthesis, etc. It should be needless to say that the preparation of nanoparticles having precisely controlled particle size, size distribution, chemical composition, and surface properties is essentially important to realize true nanoparticle technology. This book, written by Dr. Dibyendu Ganguli and Dr. Munia Ganguli, deals with the preparation methodologies for inorganic nanoparticles using macro and microemulsions as microreactor. There are several differences between these two emulsions: in addition to water droplet size, thermodynamic stability and fusion/redispersion dynamics of the droplets. The properties of the nanoparticles prepared in these emulsion systems are seriously influenced and controlled by the selection of dynamic and static conditions. *Introduction to Nanoscience* Gabor L. Hornyak, Joydeep Dutta, H.F. Tibbals, Anil Rao, 2008-05-15

Tomorrow's nanoscientist will have a truly interdisciplinary and nano-centric education rather than, for example, a degree in chemistry with a specialization in nanoscience. For this to happen, the field needs a truly focused and dedicated textbook. This full color masterwork is such a textbook. It introduces the nanoscale along with the societal impacts of nanoscience, then presents an overview of characterization and fabrication methods. The authors systematically discuss the chemistry, physics, and biology aspects of nanoscience, providing a complete picture of the challenges, opportunities, and inspirations posed by each facet, before giving a brief glimpse at nanoscience in action. *nanotechnology* Introduction to Nanoscience and

Nanotechnology Gabor L. Hornyak, H.F. Tibbals, Joydeep Dutta, John J. Moore, 2008-12-22. The maturation of nanotechnology has revealed it to be a unique and distinct discipline rather than a specialization within a larger field. Its textbook cannot afford to be a chemistry, physics, or engineering text focused on nano. It must be an integrated multidisciplinary and specifically nano textbook. The archetype of the modern nano textbook. *Electrochemistry of Novel Electrode Materials for*
