guidance in navigating an approach to the solution      **Professional Learning in the Knowledge Society** Karen Jensen, Leif Chr. Lahn, Monika Nerland, 2012-10-20 This book presents an entirely new approach to professional learning based on perspectives of the knowledge society and in particular an interpretation of Knorr Cetina's work on scientific epistemic cultures Starting with a conceptual chapter and followed by a suite of empirical studies from accountancy education nursing and software engineering the book elaborates how a knowledge production and circulation take distinct forms in those fields b how the knowledge objects of practice in those fields engross and engage professionals and in the process people and knowledge are transformed by this engagement By foregrounding an explicit concern for the role of knowledge in professional learning the book goes much farther than the current fashion for describing practice based learning It will therefore be of considerable interest to the research policy practitioner and student communities involved with professional education learning or interested in innovation and knowledge development in the professions      *The Mathematics of Various Entertaining Subjects* Jennifer Beineke, Jason Rosenhouse, 2019-04-09 The history of mathematics is filled with major breakthroughs resulting from solutions to recreational problems Problems of interest to gamblers led to the modern theory of probability for example and surreal numbers were inspired by the game of Go Yet even with such groundbreaking findings and a wealth of popular level books exploring puzzles and brainteasers research in recreational mathematics has often been neglected The Mathematics of Various Entertaining Subjects brings together authors from a variety of specialties to present fascinating problems and solutions in recreational mathematics Contributors to the book show how sophisticated mathematics can help construct mazes that look like famous people how the analysis of crossword puzzles has much in common with understanding epidemics and how the theory of electrical circuits is useful in understanding the classic Towers of Hanoi puzzle The card game SET is related to the theory of error correcting codes and simple tic tac toe takes on a new life when played on an affine plane Inspirations for the book's wealth of problems include board games card tricks fake coins flexagons pencil puzzles poker and so much more Looking at a plethora of eclectic games and puzzles The Mathematics of Various Entertaining Subjects is sure to entertain challenge and inspire academic mathematicians and avid math enthusiasts alike      A Friendly Mathematics Competition Rick Gillman, 2023-05-30 A Friendly Mathematics Competition tells the story of the Indiana College Mathematics Competition ICMC by presenting the problems solutions and results of the first 35 years of the ICMC The ICMC was organized in reaction to the Putnam Exam its problems were to be more representative of the undergraduate curriculum and students could work on them in teams Participation was originally restricted to the small private colleges and universities of the state but was later opened up to students from all of the schools in Indiana The competition was quickly nicknamed the Friendly Competition because of its focus on solving mathematical problems which brought faculty and students together rather than on the competitive nature of winning Organized by year the problems and solutions in this volume present an excellent archive of information about what has been

expected of an undergraduate mathematics major over the past 35 years With more than 245 problems and solutions the book is also a must buy for faculty and students interested in problem solving The index of problems lists problems in Algebraic Structures Analytic Geometry Arc Length Binomial Coefficients Derangements Differentiation Differential Equations Diophantine Equations Enumeration Field and Ring Theory Fibonacci Sequences Finite Sums Fundamental Theorem of Calculus Geometry Group Theory Inequalities Infinite Series Integration Limit Evaluation Logic Matrix Algebra Maxima and Minima Problems Multivariable Calculus Number Theory Permutations Probability Polar Coordinates Polynomials Real Valued Functions Riemann Sums Sequences Systems of Equations Statistics Synthetic Geometry Taylor Series Trigonometry and Volumes     *Hungarian Problem Book IV* Robert Barrington Leigh, Chiang-Fung Andrew Liu, 2011 Forty eight challenging problems from the oldest high school mathematics competition in the world This book is a continuation of Hungarian Problem Book III and takes the contest from 1944 through to 1963 This book is intended for beginners although the experienced student will find much here     **The Australian Mathematics Teacher** , 2003
