Key Points

1. An effective injury prevention can not only include the proper equipment and training, but should also cover lifestyle and the mental condition of the athlete.
2. Knowledge of the correct training methods and respect of the recovery time by athletes and coaches play a crucial role in prevention.
3. Athletes must follow an appropriate diet to fulfill their functional requirements and adopt a healthy lifestyle, avoiding excesses and voluptuary habits.
4. Body and mind can not be considered separately: proper psychological preparation helps the athlete to bear the agonistic stress and physical loads.
5. The proper equipment and the appropriate structures are the final major component of the process of injury prevention.

4.1 Introduction

General prevention of injuries is a fundamental part to be completed and respected for all people involved in sports activity.

The athletes, the coaches, the physical trainer and the team manager should all be aware of these important steps that allow a safe sports activity reducing the risks of temporary invalidating injuries.

General prevention includes several aspects that can be considered intrinsic and extrinsic. The intrinsic ones are related to training methods, nutrition, way of living and psychological attitudes. The extrinsic ones include active and passive protection of the athletes and the features of the playing field in order to reduce the risk of injuries.

In this chapter, all those aspects will be evaluated and discussed.

4.2 Training Methods

Improving performance is not just about training; athletes need to follow a carefully planned training programme.

This programme must be systematic and take into account the demands of activity and the needs, preferences and abilities of the athlete.

There are a number of principles that athletes and coaches must follow to improve performances and to work in safety.

Health Behavior Change in Populations Scott Kahan, Andrea Carlson Gielen, Peter J. Fagan, Lawrence W. Green, 2014-11-26 Focuses on

today's major public health concerns to teach students the principles of population health behavior and behavior change. The single greatest way to improve health and quality of life is not by developing new medical approaches but by addressing harmful personal behaviors. These behaviors, which include tobacco, alcohol, and drug use, diet, and physical activity, play a significant role in the risk for and development, treatment, and management of the most common causes of disease, disability, and death in the modern world. *Health Behavior Change in Populations* is designed to teach students and practitioners strategic principles for creating positive behavioral change on a population level. With an emphasis on the application of theory and research to practice, this textbook presents current and future public health professionals with a range of methods geared towards helping people make healthy choices from informing the individual to modifying the surroundings and circumstances that drive decision making. Written and edited by experts in the health professions, the book is arranged into three sections: State of the Field, State of the Science, and Cross-Cutting Issues. The chapters within these sections include learning objectives with boldfaced keywords and a glossary of terms. Each chapter addresses the magnitude of the public health burden, key determinants, and conceptual framework for behaviors and behavior change, including individual, familial, interpersonal, community, sociocultural, structural, and political perspectives. Current evidence-based interventions and best practices, roles for key stakeholders including health plans, employers, workplace health departments, agencies, sectors such as recreational and agricultural policymakers, community groups, advocates, clinics, clinicians, researchers, and funding institutions, and considerations for implementation, evaluation, and translation.
