Innovation In Architecture:

Integrating Innovation in Architecture Ajla Aksamija, 2016-12-06 Today's design professionals are faced with challenges on all fronts. They need not only to keep in step with rapid technological changes and the current revolution in design and construction processes but to lead the industry. This means actively seeking to innovate through design research, raising the bar in building performance and adopting advanced technologies in their practice. In a constant drive to improve design processes and services, how is it possible to implement innovations? And moreover, to assimilate them in such a way that design methods and technologies remain fully integrated. Focusing on innovations in architecture, this book covers new materials and design methods, advances in computational design practices, innovations in building technologies and construction techniques, and the integration of research with design. Moreover, it discusses strategies for integrating innovation into design practices, risks, and economic impacts. Through numerous case studies, it illustrates how innovations have been implemented on actual architectural projects and how design and technical innovations are used to improve building performance as well as design practices in cutting-edge architectural and engineering firms. Projects of all scales and building types are discussed in the book, ranging from small-scale installations, academic and commercial buildings to large-scale mixed-use, healthcare, civic, academic, scientific research, and sports facilities. Work from design firms around the globe and of various scales is discussed in the book, including, for example, Asymptote Architecture, Cepezed, CO Architects, Consarc Architects, FAAB, Architektura Gerber Architekten, HOK, IDOM, ACXT, MAD Architects, Morphosis Architects, SDA, Synthesis Design Architecture, Studiotrope, Perkins Will, Richter Dahl, Rocha Associados, Snhetta, Rob Ley Studio, Trahan Architects, UNStudio, and Zaha Hadid Architects among many others.

Innovation in Architecture Alan J.

Emergency Driven Innovation Ernesto Antonini, Andrea Boeri, Francesca Giglio, 2020-09-24 This book explores the relationship between the circular economy and the building technologies within the quintuple helix innovation model The main question the book answers is whether and how the conversion of sustainable construction processes can be a powerful engine of innovation for

the industry The post disaster settlements and temporary shelters are assumed as examples of what can be defined as circular buildings in regards to the technical arrangements and features material and process reversibility as the social and participative dimensions Several cases of these interventions are documented and classified by three thematic axes design building and living This highlighted new trajectories for innovation in building technology consistent with the social economic and productive dynamics that no longer allows for growing performance by increasing the resource demand A theoretic framework is traced supporting this vision which shows how the low technologies can respond to the transition of the economic model from linear to circular Within this trajectory the low tech design for remanufacturing represents a reference framework and a promising tool applicable to the building processes The enabling technologies and new paradigms for the transition to circular economy emerging from the European research scenario are also mapped outlining the possible future developments in line with open technical and societal challenges
