Leadership and Place Chris Collinge, John Gibney, Chris Mabey, 2013-10-18 Despite the radical transformation of society associated with globalisation shifting patterns of demography and the revolution in information and communication technologies over the last two decades we remain profoundly attached to place in economic social cultural and emotional terms The idea of sustainable place shaping has made its way to the heart of the debate on the form and delivery of integrated economic development planning housing regeneration education transport and health policy for our neighbourhoods towns cities and regions The delivery of policy for place shaping has become a far more complex cross boundary and relational leadership task and there is now a requirement for a refreshed approach to leadership development for collaborative learning and associational working Going forward what is needed is a more insightful and comprehensive conceptual framework related to the leadership of place that takes account of the paradigm shift occurring in economic development planning and regeneration studies Against this background this timely book takes stock of the leadership literature and connects with the experience and views of those working in economic development planning and regeneration In this book we seek to enhance the discussion of these new leadership challenges This collection first appeared as a special issue of Policy Studies and is now published by kind permission in the Regional Studies Association book series Regions and Cities

The Cluster Organization Anna Maria Lis, Adrian Lis, 2021-02-22 Cluster organizations are becoming more and more popular both in developing and developed countries Considering the development of cluster policy and the related dynamic growth of cluster initiatives in the world the lack of sufficient knowledge on the development of cooperation in cluster organizations inhibits their development and in many cases causes their complete disintegration The book provides new important elements to the current system of knowledge filling in cognitive and research gaps in the scientific literature on problems related to cooperation in cluster organizations The most valuable features for the reader concern the epistemological methodological and application aspects The new element includes a theoretical concept which refers to the trajectory of development of cooperative relationships in cluster organizations that facilitates the understanding and explanation of mechanisms responsible for cooperation in such organizations The concept also has great practical advantages especially for people implementing the idea of clustering coordinators facilitators and members of cluster organizations as well as

politicians and public authorities are responsible for shaping and implementing the cluster policy. It will be of value to researchers, academics and students in fields with an interest in organizational studies, management of innovation and technology, strategic management, industrial economics and economic geography.

Growth and Innovation of Competitive Regions Ugo Fratesi, Lanfranco Senn, 2008-12-29

Time Time b a Space Space Time Time c d Space Space

Fig 1 Different possible scales for growth and innovation analyses: spatial dimension, the sectoral dimension and the time dimension are represented. In Fig 1a regional development analyses are revealed where the economy is sliced vertically into regions and their dynamics are investigated. The study of the evolution of industries typical of evolutionary industrial economics is represented in Fig 1b where the economy is divided horizontally into sectoral slices. This approach has progressed considerably in recent years; see Malerba 2006 for a recent survey. Modifications of industries have important spatial implications which, however, are not normally at the core of these analyses even though spatial patterns of innovation differ greatly from sector to sector. Breschi 2000. Our approach operates in the manner of Fig 1a and we will focus on regions, extending the analysis to industries only where this is regionally and structurally relevant. Hence the approach in the book belongs to the tradition of regional development theories but in contrast to the more traditional analyses we will not consider the region as an economic unit per se. Rather, interactions between and within regions are very relevant to the performance of individual regions in an integrated world and will be at the core of the analyses of the following chapters.

Intellectual Property, Innovation and Management in Emerging Economies Ruth Taplin, Alojzy Z. Nowak, 2010-09-13

This book argues that intellectual property (IP) management, development and innovation are fundamental to economic development, especially in newly emerging economies which often hold vast reserves of natural resources and human knowledge that remain unprotected. It sheds light on countries that are gradually realising this situation with examples from many parts of the world including Eastern Europe, Africa and especially Asia including India where a great deal is being made of innovation and intellectual property to stimulate economic growth. These case studies are seen within the theoretical context of the future of cross border IP which is slowly becoming a reality. Specific examples go beyond the patent prosecution highway to which China has also recently signed up and India's development of generic drugs at lower costs. Experts in the field including practising IP lawyers explain and criticise current and new models being tested in emerging economies concerning IPR. Original case studies of hitherto little understood breaches of African trademarks by the US and Japan and patenting mistakes in relation to little known Indian forest plants all damage emerging economies and their native people's lives. While proper implementation of IP laws by emerging economies themselves can lead to positive outcomes for all involved, the key is an independent judiciary coupled by thoughtful and thoroughly understood implementation of IP laws within the context of cross border IP. The book shows through models how different emerging economies are at various levels of developing their IPR and what paths they are taking to do this. Finally, it provides a comprehensive assessment of the ways in which innovation

protection and enforcement of IP laws can help newly emerging economies achieve economic growth without destroying natural and human resources while moving ahead from the current global financial crisis

Changing Governance of Research and Technology Policy Jakob Edler, Stefan Kuhlmann, Maria Behrens, 2003-01-01 This collection analyses and comments on the development of the ERA which seeks to co ordinate national research and advance European wide projects The contributors include leading scholars of European integration and technology policy and high level administrators They discuss the potential impacts benefits and limits to research and innovation policy within Europe both in the short and long term Moreover the debate about ERA is placed firmly in the context of the overall changes at the European level

Cluster Development and Policy Philip Raines, 2017-11-22 This title was first published in 2002 Examining cluster development policy in Europe and outlining its distinctive features this innovative text places it within the national context of regional policy making It also identifies the

features supporting the successful development of industrial clusters and provides a clear overview of cluster theory and policy practice followed by seven key case studies on the history and operation of different cluster policies in Europe While there has been a number of books on the theory of cluster development little research has been published on policy By filling this gap this book will be of interest to a policy making audience as well as students and researchers of regional economic development throughout Europe

Innovation System Frontiers Brian Wixted, 2009-06-12 Recent economic transformations in the world economy are progressing in two divergent directions international production fragmentation and industrial agglomeration Based on extensive data analysis and using models of interdependencies between key economies this book analyses innovation systems that cross national borders It is shown that technological complexity is an important factor in the formation of highly specific production networks and why for a number of production systems fragmentation and clustering are two sides of the same coin By outlining the picture of a world economy structured around networks of clusters and joined together through systems of linkages of components people and knowledge flows the author helps to promote a better understanding of recent economic transformations

Innovation, Human Capabilities, and Democracy Reijo Miettinen, 2013 All governments strive to develop and implement policies that contribute to innovation Both in academic research and policy circles the concept of National Innovation Systems has represented a significant approach to industrial policy research and development and innovation This book will review the development and implementation of this approach and its strengths and weakness by considering the experience of Finland widely regarded as a model of the information society high quality equal education and systemic innovation policy amongst the Nordic welfare states which themselves have increasingly topped the lists in national competitiveness The first part of the book analyzes the foundations emergence and development of the National Innovation System approach and its adoption in Finnish science and technology policy throughout the 1990s and 2000s In the second part of the book an alternative viewpoint to innovation and welfare policy is outlined based on the idea of capability cultivating institutions as a key foundation both for national welfare and competitiveness The development of the Finnish comprehensive school and its special education system is studied in order to clarify the nature of institutional change and learning and the conditions of governing and developing the enabling services The concept of an enabling welfare state is developed to answer the challenges of the Nordic model of welfare in a globalizing knowledge driven economy

What is Sustainable Technology? Karel Mulder, Didac Ferrer, Harro van Lente, 2017-09-08 Designers of technology have a major responsibility in the current age Their designs can have tremendous effects on society in both the short and the long term In fact sustainable development itself has all the characteristics of a design project albeit a vast one But a failed product design here will be not just be unsuccessful in the market it will have far reaching consequences It is our common responsibility to make the project successful Technology has played an important role in creating the problems that we now face but it will also play an important role in solving them But this does not mean

the technological fix will be easy How do we allocate resources and attention when there are myriad issues under the umbrella of sustainable development currently in competition with one another How do we arrive at precise specifications for the sustainable technologies that are to be developed and furthermore reach consensus on these specifications What if our sustainable technological solutions aggravate other problems or create new ones And because sustainable development is all about the long term consequences of our actions how do we assess the effects of modifying existing landscapes infrastructures and patterns of life How could we be sure in advance that the changes that new technologies bring will make our society more sustainable These dilemmas and paradoxes are the subject of this provocative book Sometimes the claim that a technology is sustainable is made in order to make the technology acceptable in the political process as in the case of nuclear energy production where the claims of sustainability refer to the absence of CO₂ emissions In the case of biofuels claims of sustainability have led to a fuel or food debate showing that sustainability has counteracting articulations And the well known rebound effect is observed when increased resource efficiency can create a stimulus for consumption What is Sustainable Technology illustrates that the sustainability impact of a technology is often much more complicated and ambivalent than one might expect Making improvements to existing designs is not the technological challenge that will lead to real solutions We mustn't look to change a part of a machine but rather the machine as a whole or even the whole system in which it functions It is these system innovations that have the potential to make a genuine contribution to sustainable development What is Sustainable Technology will help all those involved in designing more sustainable technologies in determining their strategies It does so by presenting case studies of different technologies in contrasting contexts Each case asks 1 What articulations of sustainability played a role in the design process 2 What sustainability effects did this technology lead to 3 Who was affected where and when 4 Could the designer have foreseen these consequences 5 How did the designer anticipate them 6 How was societal interaction dealt with during the design process Finally the authors reflect on future options for the sustainable technology designer They argue that an important first step is an awareness of the multitude of sustainable development challenges that play a role in production use recycling and end of life disposal What is Sustainable Technology will be essential reading for product designers engineers material scientists and others involved in the development of sustainable technologies as well as a wide academic audience interested in the complexities of the sustainable design process
