*Science And Technology In Deep Underground Laboratories* Aldo Ianni, Sean M. Paling, Carlos Peña Garay, Jeter Hall, 2024-12-31 Deep Underground Laboratories are multidisciplinary research infrastructures with a rock overburden that goes from a few hundred meters to a few kilometers Presently there are 13 laboratories in operation on three Continents North America Europe Asia Australia for a global excavation volume of order  $10^6$  m<sup>3</sup> New laboratories are being constructed proposed including a new one in South America The main reason to develop an underground infrastructure is related to operate in a less radioactive environment where in particular muons from cosmic rays are strongly suppressed This low background environment opens the possibility to search for very rare events such as low energy neutrino interactions dark matter direct detection and neutrinoless double beta decay These are crucial studies to enhance our understanding of the Universe In addition these special environments in which these infrastructures are located provide opportunities to carry out many and varied studies on geology geophysics biology and planetary exploration of significant interest and impact in both pure and applied science A number of technological challenges over the last decades have been faced by scientists working in these infrastructures As a consequence state of the art facilities are in operation in Underground Laboratories for radio purity assay ultra low temperature detectors quantum computing radon suppression and mitigation advanced machining and next generation gravitational wave detectors

### **Extremophiles in Deep-Sea Environments** K.

Horikoshi, K. Tsujii, 1999-11-01 Many organisms in deep sea environments are extremophiles thriving in extreme conditions high pressure high or low temperature or high concentrations of inorganic compounds This book presents the microbiology of extremophiles living in the deep sea and describes the isolation cultivation and taxonomic identification of microorganisms retrieved from the Mariana Trench the world's deepest point Also explained are techniques for recovering pressure loving bacteria the barophiles piezophiles and for whole genome analysis of *Bacillus halodurans* C 125 Physiological analysis of the pressure effect in *Saccharomyces cerevisiae* and *Escherichia coli* is used to answer the question of how deep sea organisms survive under high hydrostatic pressure These research results are useful in both basic science and industrial applications Readers discover a new microbial world in the ocean depths with state of the science information on extremophiles

*Ecosystems and Biodiversity in Deep Waters and High Seas* Kristina M. Gjerde, 2006 Ecosystems and Biodiversity in Deep Waters and High Seas outlines a number of options for the conservation and sustainable management of the deep seas and open oceans including actions and measures that reflect an integrated approach to oceans management based on ecological boundaries rather than just political ones giving higher levels of protection to vulnerable species like deep sea fish as well as to biologically and ecologically significant ecosystems such as cold water corals and hydrothermal vent communities

**Models and Simulations of the Electric Field in Deep Brain Stimulation** Fabiola Alonso, 2018-09-10 Deep brain stimulation DBS is an established surgical therapy for movement disorders such as Parkinson's disease PD and essential tremor ET. A thin electrode is implanted in a predefined area of the brain with the use of stereotactic neurosurgery. In the last few years, new DBS electrodes and systems have been developed with possibilities for using more parameters for control of the stimulation volume. In this thesis, simulations using the finite element method FEM have been developed and used for investigation of the electric field EF extension around different types of DBS lead designs: symmetric steering and stimulation modes, voltage current. The electrode surrounding was represented either with a homogeneous model or a patient-specific model based on individual preoperative magnetic resonance imaging MRI. The EF was visualized and compared for different lead designs and operating modes. In Paper I, the EF was quantitatively investigated around two lead designs 3389 and 6148 simulated to operate in voltage and current mode under acute and chronic time points following implantation. Simulations showed a major impact on the EF extension between postoperative time points which may explain the clinical decisions to change the stimulation amplitude weeks after implantation. In Paper II, the simulations were expanded to include two leads having steering function 6180 Surestim1 and patient-specific FEM simulations in the zona incerta. It was found that both the heterogeneity of the tissue and the operating mode influence the EF distribution and that equivalent contact configurations of the leads result in similar EF. The steering mode presented larger volumes in current mode when using equivalent amplitudes. Simulations comparing DBS and intraoperative stimulation test using a microelectrode recording MER system. Paper III showed that several parallel MER leads and the presence of the non-active DBS contacts influence the EF distribution and that the DBS EF volume can cover but also extend to other anatomical areas. Paper IV introduces a method for an objective exploitation of intraoperative stimulation test data in order to identify the optimal implant position in the thalamus of the chronic DBS lead. Patient-specific EF simulations were related to the anatomy with the help of brain atlases and the clinical effects which were quantified by accelerometers. The first results indicate that the good clinical effect in ET is due to several structures around the ventral intermediate nucleus of the thalamus.

**Nordic Homicide in Deep Time** Janne Kivivuori, Mona Rautelin, Jeppe Büchert Netterstrøm, Dag Lindström, Guðbjörg S. Bergsdóttir, Jónas O. Jónasson, Martti Lehti, Sven Granath, Mikkel M. Okholm, Petri Karonen, 2022-02-16 Nordic Homicide in Deep Time draws a unique and detailed picture of developments in human interpersonal violence and presents new findings on rates, patterns and long-term changes in lethal violence in the Nordics. Conducted by an interdisciplinary team of criminologists and historians, the book analyses homicide and lethal violence in northern Europe in two eras: the 17th century and early 21st century. Similar and continuous societal structures, cultural patterns and legal cultures allow for long-term and comparative homicide research in the Nordic context. Reflecting human universals and stable motives such as revenge, jealousy, honour and material conflicts, homicide as a form of human behaviour enables long-duration comparison. By describing the rates and patterns of homicide during these

two eras the authors unveil continuity and change in human violence Where and when did homicide typically take place Who were the victims and the offenders what were the circumstances of their conflicts Was intimate partner homicide more prevalent in the early modern period than in present times How long a time elapsed from violence to death Were homicides often committed in the context of other crime The book offers answers to these questions among others comparing regions and eras We gain a unique and empirically grounded view on how state consolidation and changing routines of everyday life transformed the patterns of criminal homicide in Nordic society The path to pacification was anything but easy punctuated by shorter crises of social turmoil and high violence The book is also a methodological experiment that seeks to assess the feasibility of long duration standardized homicide analysis and to better understand the logic of homicide variation across space and over time In developing a new approach for extending homicide research into the deep past the authors have created the Historical Homicide Monitor The new instrument combines wide explanatory scope measurement standardization and articulated theory expression By retroactively expanding research data to the pre statistical era the method enables long duration comparison of different periods and areas Based on in depth source critique the approach captures patterns of criminal behaviour beyond the control activity of the courts The authors foresee the application of their approach in even remoter periods Nordic Homicide in Deep Time helps the reader to understand modern homicide by revealing the historical continuities and changes in lethal violence The book is written for professionals university students and anyone interested in the history of human behaviour

**Lecture Notes In Deep Learning: Theoretical Insights Into An Artificial Mind** Shlomo Dubnov, Dongmian Zou, 2025-07-18 The compendium provides an introduction to the theory of deep learning from basic principles of neural network modeling and optimization to more advanced topics of neural networks as Gaussian processes neural tangent and information theory This unique reference text complements a largely missing theoretical introduction to neural networks without being overwhelmingly technical in a level accessible to upper level undergraduate engineering students Advanced chapters were designed to offer an additional intuition into the field by explaining deep learning from statistical and information theory perspectives The book further provides additional intuition to the field by relating it to other statistical and information modeling approaches

**Regular Fabrics in Deep Sub-Micron Integrated-Circuit Design** Fan Mo, Robert K. Brayton, 2007-05-08 Regular Fabrics in Deep Sub Micron Integrated Circuit Design discusses new approaches to better timing closure and manufacturability of DSM Integrated Circuits The key idea presented is the use of regular circuit and interconnect structures such that area delay can be predicted with high accuracy The co design of structures and

algorithms allows great opportunities for achieving better final results thus closing the gap between IC and CAD designers The regularities also provide simpler and possibly better manufacturability In this book we present not only algorithms for solving particular sub problems but also systematic ways of organizing different algorithms in a flow to solve the design problem as a whole A timing driven chip design flow is developed based on the new structures and their design algorithms which produces faster chips in a shorter time **In deep sleep we dream no more and confabulate with the stars**
