Proceedings of the ACM SIGSOFT International Symposium on Software Testing and Analysis Michal Young, 1998

Computational Intelligence in Software Quality Assurance Scott Dick, Abraham Kandel, 2005 Software systems surround us Software is a critical component in everything from the family car through electrical power systems to military equipment As software plays an ever increasing role in our lives and livelihoods the quality of that software becomes more and more critical However our ability to deliver high quality software has not kept up with those increasing demands The economic fallout is enormous the US economy alone is losing over US 50 billion per year due to software failures This book presents new research into using advanced artificial intelligence techniques to guide software quality improvements The techniques of chaos theory and data mining are brought to bear to provide new insights into the software development process Written for researchers and practitioners in software engineering and computational intelligence this book is a unique and important bridge between these two fields

Software Engineering - ESEC/FSE '99 Oskar Nierstrasz, Michel Lemoine, 2003-05-21 For the second time the European Software Engineering Conference is being held jointly with the ACM SIGSOFT Symposium on the Foundations of Software Engineering FSE Although the two conferences have different origins and traditions there is a significant overlap in intent and subject matter Holding the conferences jointly when they are held in Europe helps to make these thematic links more explicit and encourages researchers and practitioners to attend and submit papers to both events The ESEC proceedings have traditionally been published by Springer Verlag as they are again this year but by special arrangement the proceedings will be distributed to members of ACM SIGSOFT as is usually the case for FSE ESEC FSE is being held as a single event rather than as a pair of colocated events Submitted papers were therefore evaluated by a single program committee ESEC FSE represents a broad range of software engineering topics in mainly two continents and consequently the program committee members were selected to represent a spectrum of both traditional and emerging software engineering topics A total of 141 papers were submitted from around the globe Of these nearly half were classified as research papers a quarter as experience papers and the rest as both research and experience papers Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations

Formal Approaches to Software Testing Wolfgang Grieskamp, Carsten Weise, 2006-06-03 This book constitutes the thoroughly refereed post proceedings of the 5th International Workshop on Formal Approaches to Software Testing FATES 2005 held in Edinburgh UK in July 2005 in conjunction with CAV 2005 The book presents 13 revised full papers together with 1 work in progress paper These address formal approaches to testing and use techniques from areas like theorem proving model checking constraint resolution program analysis abstract interpretation Markov chains and various others

Testing of Software and Communicating Systems Margus Veenes, Jan Tretmans, Wolfgang Grieskamp, 2007-08-19 This book constitutes the refereed

proceedings of the 19th IFIP TC 6 WG 6.1 International Conference on Testing Communicating Systems TestCom 2007 and the 7th International Workshop on Formal Approaches to Testing of Software FATES 2007 held in Tallinn Estonia. Model Checking Software Patrick Godefroid, 2005-08-25. This volume contains the proceedings of the 12th International SPIN Workshop on Model Checking of Software held in San Francisco USA on August 22-24 2005.

Composing Software Components Dick Hamlet, 2010-08-13. Software components and component based software development CBSD are acknowledged as the best approach for constructing quality software at reasonable cost. *Composing Software Components: A Software testing Perspective* describes a 10 year investigation into the underlying principles of CBSD. By restricting attention to the simplest cases, startling results are obtained. Components are tested using only executable code. Their behavior is recorded and presented graphically. Functional and non functional behavior of systems synthesized from components are calculated from component tests alone. No access to components themselves is required. Fast accurate tools support every aspect of CBSD from design through debugging. Case studies of CBSD also illuminate software testing in general, particularly an expanded role for unit testing and the treatment of non functional software properties. This unique book contains more than a dozen case studies of fully worked out component synthesis with revealing insights into fundamental testing issues. Presents an original fundamental theory of component composition that includes persistent state and concurrency based on functional software testing rather than proof of programs. Comes with free supporting software with tutorial examples and data for replication of examples. The Perl software has been tested on Linux, Macintosh and Windows platforms. Full documentation is provided. Includes anecdotes and insights from the author's 50 year career in computing as systems programmer, manager, researcher and teacher.

Composing Software Components: A Software testing Perspective will help software researchers and practitioners to understand the underlying principles of component testing. Advanced students in computer science, engineering and mathematics can also benefit from the book as a supplemental text and reference.

Tools and Algorithms for the Construction and Analysis of Systems

Joost-Pieter Katoen, Perdita Stevens, 2003-07-31. ETAPS 2002 was the 6th instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised 5 conferences: FOSSACS, FASE, ESOP, CC, TACAS. 13 satellite workshops: ACL2, AGT, CMCS, COCV, DCC, INT, LDFA, SC, SFEDL, SLAP, SPIN, TPTS and VISS. 8 invited lectures, not including those specific to the satellite events and several tutorials. The events that comprise ETAPS address various aspects of the system development process including specification, design, implementation, analysis and improvement. The languages, methodologies and tools which support these activities are all well within its scope. Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the

other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive *SPIN Model Checking and Software Verification* Klaus Havelund, John Penix, Willem Visser, 2000-08-21 The SPIN workshop is a forum for researchers interested in the subject of automata based explicit state model checking technologies for the analysis and verification of asynchronous concurrent and distributed systems The SPIN del checker <http://netlib.bell-labs.com/netlib/spin/whatispin.html> developed by Gerard Holzmann is one of the best known systems of this kind and has attracted a large user community This can likely be attributed to its efficient state exploration algorithms The fact that SPIN's modeling language Promela resembles a programming language has probably also contributed to its success Traditionally the SPIN workshops present papers on extensions and uses of SPIN As an experiment this year's workshop was broadened to have a slightly wider focus than previous workshops in that papers on software verification were encouraged Consequently a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages Solutions include translations from source code to Promela as well as specially designed model checkers that accept source code We believe that this is an interesting research direction for the formal methods community and that it will result in a new set of challenges and solutions Of course abstraction becomes the key solution to deal with very large state spaces However we also see potential for integrating model checking with techniques such as static program analysis and testing Papers on these issues have therefore been included in the proceedings

Formal Methods and Software Engineering Zhiming Liu, Jifeng He, 2006-10-24 This book constitutes the refereed proceedings of the 8th International Conference on Formal Engineering Methods ICFEM 2006 held in Macao China in November 2006 The 38 revised full papers presented together with three keynote talks were carefully reviewed and selected from 108 submissions The papers address all current issues in formal methods and their applications in software engineering

Artificial Intelligence Methods in Software Testing Mark Last, Abraham Kandel, Horst Bunke, 2004 Coverage of novel methods for software testing and software quality assurance Introduction to state of the art data mining models and techniques Analyses of new and promising application domains of artificial intelligence and data mining in software quality engineering Contributions from leading authors in the fields of software engineering and data mining Verification: Theory and Practice Nachum Dershowitz, 2004-02-24 This festschrift volume constitutes a unique tribute to Zohar Manna on the occasion of his 64th birthday Like the scientific work of Zohar Manna the 32 research articles span the entire scope of the logical half of computer science Also included is a paean to Zohar Manna by the volume editor The articles presented are devoted to the theory of computing program semantics logics of programs temporal logic automated deduction decision procedures model checking concurrent systems reactive systems hardware and software verification testing software engineering requirements specification and program synthesis **Focus on Computer Science Research** Albert Tavidze, Susan Shannon, 2004 The books in this series present leading edge research in the field of computer research

technology and applications Each contribution has been carefully selected for inclusion based on the significance of the research to the field Summaries of all chapters are gathered at the beginning of the book and an in depth index is presented to facilitate access

Tests and Proofs Catherine Dubois, 2009-06-29 1 This volume contains the research papers and invited papers presented at the Third International Conference on Tests and Proofs TAP 2009 held at ETH Zurich Switzerland during July 2 3 2009 The TAP conference is devoted to the convergence of proofs and tests It combines ideas from both sides for the advancement of software quality To prove the correctness of a program is to demonstrate through impeccable mathematical techniques that it has no bugs to test a program is to run it with the expectation of discovering bugs The two techniques seem contradictory if you have proved your program it is fruitless to comb it for bugs and if you are testing it that is surely a sign that you have given up on any hope of proving its correctness Accordingly proofs and tests have since the onset of software engineering research been pursued by distinct communities using rather different techniques and tools And yet the development of both approaches leads to the discovery of common issues and to the realization that each may need the other The emergence of model checking has been one of the first signs that contradiction may yield to complementarity but in the past few years an increasing number of research efforts have encountered the need for combining proofs and tests dropping earlier dogmatic views of incompatibility and taking instead the best of what each of these software engineering domains has to offer

Dependable Software Engineering. Theories, Tools, and Applications Shengchao Qin, Jim Woodcock, Wenhui Zhang, 2021-11-18 This book constitutes the proceedings of the 7th International Symposium on Dependable Software Engineering SETTA 2021 held in Beijing China in November 2021 The 16 full papers in this volume were carefully reviewed and selected from 39 submissions and are presented with 3 abstracts of keynote speeches They deal with latest research results and ideas on bridging the gap between formal methods and software engineering
