Issues In Radical Science:

Issues in Radical Science, 1985 Contemporary Issues in Islam and Science Muzaffar Iqbal, 2017-05-15 The articles selected for this volume explore emergent issues in the contemporary relationship between Islam and science and present studies of eight major voices in the discourse Also included is a section on the operationalization of Islamic science in the modern world and a section on studies in traditional Islamic cosmology **Radical Science**, 1986 *Knowledge and the World: Challenges Beyond the Science Wars* Martin Carrier, Johannes Roggenhofer, Günter Küppers, Philippe Blanchard, 2013-03-09 The fundamental question of whether or in what sense science informs us about the real world has pervaded the history of thought since antiquity Is what science tells us about the world determined unambiguously by facts or does the content of any scientific theory in some way depend on the human condition Sokal's hoax attacked the mere seriousness of post modern views of science and shifted this controversial debate to a new level which very quickly came to be known as Science Wars *Knowledge and the World* examines and reviews the broad range of philosophical positions on this issue extending from realism to relativism to expound the epistemic merit of science and to tackle the central question in what sense can science justifiably claim to provide a truthful portrait of reality Challenges beyond the Science Wars are taken up by contributions of scientists sociologists and philosophers of science which connect perspectives of a wide variety of disciplines including biology and cultural studies This book addresses everyone interested in the philosophy and history of science and in particular in the interplay between the social and natural sciences **Issues and Images in the Philosophy of Science** D. Ginev, Robert S. Cohen, 2012-12-06 Azarya Polikarov was born in Sofia on October 9 1921 Through the many stages of politics economy and culture in Bulgaria he maintained his rational humanity and scientific curiosity He has been a splendid teacher and an accomplished critical philosopher exploring the conceptual and historical vicissitudes of physics in modern times and also the science policies that favor or threaten human life in these decades Equally and easily at home both within the Eastern and Central European countries and within the Western world Polikarov is known as a collaborating genial colleague a working scholar not at all a visiting academic tourist He understands the philosophy of science from within in all its developments from the classical beginnings through the great ages of Galilean Newtonian Maxwellian science to the times of the stunning discoveries and imaginative theories of his beloved Einstein and Bohr of the twentieth century Moreover his understanding has come along with a deep knowledge of the scientific topics in themselves Looking at our Appendix listing his principal publications we see that Polikarov's public research career after years of science teaching and popular science writing began in the fifties in Bulgarian Russian and German journals *Contemporary Issues in African Sciences and Science Education* Akwasi Asabere-Ameyaw, George J. Sefa Dei, Kolawole Raheem, 2012-09-05 In this careful articulation of science the editors provide an intellectual marriage of Indigenous science and science education in the African context as a way of revising schooling and education They define science broadly to include both the science of the natural

physical biological and the science of the social It is noted that the current policy direction of African education continues to be a subject of intense intellectual discussion Science education is very much at the heart of much current debates about reforming African schooling Among the ways to counter vision contemporary African education this book points to how we promote Indigenous science education to improve upon African science and technology development in general The book also notes a long standing push to re examine local cultural resource knowings in order to appreciate and understand the nature content and context of Indigenous knowledge science as a starting foundation for promoting African science and technology studies in general It is argued that these interests and concerns are not mutually exclusive of each other but as a matter of fact interwoven and interdependent The breadth of coverage of the collection reflect papers in science Indigeneity identity and knowledge production and the possibilities of creating a truly African centred education It is argued that such extensive coverage will engage and excite readers on the path of what has been termed African educational recovery While the book is careful in avoiding stale debates about the Eurocentricity of Western scientific knowledge and the positing of Eurocentric science as the only science worthy of engagement it nonetheless caution against constructing a binary between Indigenous local science and knowledges and Western scientific knowledge After all Western scientific knowledge is itself a form of local knowledge born out of a particular social and historical context Engaging science in a more global context will bring to the fore critical questions of how we create spaces for the study of Indigenous science knowledge in our schools How is Indigenous science to be read understood and theorized And how do educators gather collect and interpret Indigenous science knowledges for the purposes of teaching young learners These are critical questions for contemporary African education

Criticizing Science Myrna Perez, 2024-12-17 How Stephen Jay Gould s career illustrates that criticizing science is important for American democracy The question of public trust in science feels newly urgent but today is not the first time that opposing ends of the American political spectrum have critiqued modern science This dynamic has historical roots in the early 1970s when critiques of science emerged simultaneously out of Civil Rights feminist and decolonization movements on the left as well as within the creationism of the Christian Right In *Criticizing Science* Myrna Perez follows the public career of evolutionary biologist political leftist and anti creationist Stephen Jay Gould during the final decades of the American twentieth century Gould believed that denaturalizing scientific objectivity could be part of the greater work of racial and gender justice in the United States Perez shows the promises and limitations of Gould s view most famously expressed in his 1981 book *The Mismeasure of Man* that the collective self reflection on the history of scientific bias would lead to a better less oppressive science She argues that we must instead contend with the radical possibilities that are opened by working for a resolutely democratic science By centering Gould Perez clarifies divides among left liberal and right wing movements over evolutionary science during the rise of the Christian Right and the expansion of academic feminism These divides continue to shape contemporary debates over climate change vaccines abortion policy and the nature of gender in present day American

Disrupting Science Kelly Moore, 2013-12-15 Drawing extensively from archival sources and in depth interviews Kelly Moore examines the features of American science that made it an attractive target for protesters in the early cold war and Vietnam eras including scientists work in military research and activities perceived as environmentally harmful She describes the intellectual traditions that protesters drew from liberalism moral individualism and the New Left and traces the rise and influence of scientist led protest organizations such as Science for the People and the Union of Concerned Scientists Moore shows how scientist protest activities disrupted basic assumptions about science and the ways scientific knowledge should be produced and recast scientists relationships to political and military institutions Jacket **Behavioral Science & Policy:**
