Lässig, A. Valleriani, 2008-01-11 This set of lecture notes

gives a first coherent account of a novel aspect of the living world that can be called biological information The book presents both a pedagogical and state of the art roadmap of this rapidly evolving area and covers the whole field from information which is encoded in the molecular genetic code to the description of large scale evolution of complex species networks The book will prove useful for all those who work at the interface of biology physics and information science **The Grammar of Multilingualism** Artemis Alexiadou, Terje Lohndal, 2016-10-31 This volume investigates the nature of grammatical representations in speakers who master multiple languages Since the early days of modern formal approaches to grammar most work has been based on the language of monolingual humans Less work has been conducted based on data from speakers who possess more than one language Although important insights have been gained from a monolingual focus there is every reason to believe that bi and multilingual data can inform linguistic theory A lot of ongoing work demonstrates that this is indeed the case and the current volume contributes to this growing literature Thus the research topic addresses a number of questions relating to grammatical structures in multilingual speakers as well as the methodological issues that arise in the context of studying such speakers A better understanding of the grammatical sides of multilingualism is crucial for understanding the human language capacity and in turn for offering better advice to the public concerning issues of language choice for multilingual children and adults education and language deficits in multilingual individuals Insularity and Geographic Diversity of the Peripheral Japanese Islands Akitoshi Hiraoka, Satoshi Suyama, Hisamitsu Miyauchi, Takehisa Sukesige, 2022-06-06 This book clarifies the geography of the peripheral Japanese islands from a variety of angles The islands are distributed in the tropical and cool temperate zones and the most distant inhabited islands are more than 1 000 km from the mainland In the past they were Japan s frontier close to neighboring countries However during Japan s

modernization process the islands were positioned as backward regions supplying food resources and labor Today the islands are considered to be on the periphery of Japan with lifestyles different from those of the mainland The islands are also getting attention as sightseeing locales and emigration regions attracting those who prefer country life an image of the islands that has been created by the romanticized gaze from the Japanese mainland The authors describe the various forms of the outlying Japanese islands and at the same time discover their common regional characteristics as defined by the view from the mainland Chesapeake Bay National Estuarine Research Reserve System Management Plan ,1991

Mid-Chesapeake Bay Island Ecosystem Restoration ,2008 **Decentralized Spatial Computing** Matt Duckham,2012-07-27 Computing increasingly happens somewhere with that geographic location important to the computational process itself Many new and evolving spatial technologies such as geosensor networks and smartphones embody this trend Conventional approaches to spatial computing are centralized and do not account for the inherently decentralized nature of computing somewhere the limited local knowledge of individual system components and the interaction between those components at different locations On the other hand despite being an established topic in distributed systems decentralized computing is not concerned with geographical constraints to the generation and movement of information In this context of centralized spatial computing and decentralized non spatial computing the key question becomes What makes decentralized spatial computing special In Part I of the book the author covers the foundational concepts structures and design techniques for decentralized computing with spatial and spatiotemporal information In Part II he applies those concepts and techniques to the development of algorithms for decentralized spatial computing stepping through a suite of increasingly sophisticated algorithms from algorithms with minimal spatial information about their neighborhoods to algorithms with access to more detailed spatial information such as direction distance or coordinate location to truly spatiotemporal algorithms that monitor environments that are dynamic even using networks that are mobile or volatile Finally in Part III the author shows how decentralized spatial and spatiotemporal algorithms designed using the techniques explored in Part II can be simulated and tested In particular he investigates empirically the important properties of a decentralized spatial algorithm its computational efficiency and its robustness to unavoidable uncertainty Part III concludes with a survey of the opportunities for connecting decentralized spatial computing to ongoing research and emerging hot topics in related fields such as biologically inspired computing geovisualization and stream computing The book is written for students and researchers of computer science and geographic information science Throughout the book the author s style is characterized by a focus on the broader message explaining the process of decentralized spatial algorithm design rather than the technical details Each chapter ends with review questions designed to test the reader s understanding of the material and to point to further work or research The book includes short appendices on discrete mathematics and SQL Simulation models written in NetLogo and associated source code for all the algorithms presented in the book can be

Santos-Paulino, Mark McGillivray, Wim Naudé, 2013-10-18 Small island developing states SIDS are characterised by high economic geographical and social vulnerability. These states are perceived as economically vulnerable exhibiting poor economic performance and embedding low levels of achieved well being on most criteria. SIDS which occupy very large parts of the world face idiosyncratic development challenges largely owing to their susceptibility to external shocks. Still these countries are all too often overlooked in the development research literature. Arising from a UNU WIDER research project this book provides in depth research on the international dimensions of SIDS development experiences. Using a wealth of data as well as case studies the main topics examined comprise aid policies and growth the costs of neglect in terms of losses owing to a country falling into the fragile states group of that country and those in its region the composition of trade and the impact of external shocks and the impact of remittances. The studies jointly provide valuable insights for small islands and other developing countries in the pursuit of sustainable growth and development.
