

Book Review: EXPERIMENTAL STATISTICS IN ENTOMOLOGY.

GY. F. M. Wadley, Biological Laboratories, U. S. Department of the Army, and Division Biological Standards, National Institute of Health, Graduate School Press, U. S. Department of Agriculture, Washington, D. C. 1967. 133 pages, 98 tables, 3 figures. Price \$6.50.

This book is divided into five sections: Introduction; Chapter 1, Survey of Problems and Methods; Chapter 2, Sampling; Chapter 3, Experimental Design; and, Chapter 4, Practical Examples. All sections are well written, easy to understand, and free of errors. Approximately 100 references in statistical and biological literature are presented together with thirty-three (33) examples of situations where statistical methods have been applied to biological and entomological problems.

The author's intent is "to help entomological workers who have a real interest, but little training, in applying statistical methods to research problems." Dr. Wadley's book, with its presentation of many practical examples complete with "live data," is a welcome contribution to the field of entomology. Many books on applied statistics have been deficient in practical examples. This book presents excellent discussions of sampling methods and procedures, the statistical analysis of qualitative data, and various types of population distributions which the entomologist may encounter.

In this reviewer's opinion, some elementary statistical methods which are important for scientists to learn have not been included in this book. There is no mention of the powerful uses of plotting techniques in the interpretation of designed experiments and other data. Graphical methods can provide valuable insight as to the nature and magnitude of main effects and interactions. A clear definition of interaction is not presented and no instruction is given as to how an experimenter should interpret a significant interaction. The partially hierarchical design is discussed in one small paragraph. Many experiments in entomological research are of this type and an example, complete with discussion, would have been valuable. The concept of the confidence interval is only briefly discussed and no mention is made of the coefficient of variation and its uses.

In summary, this book should be valuable not only to entomologists but also to all workers engaged in agriculture and biological research. It should be an excellent source of problems to supplement a graduate level course in applied statistics and/or experimental design.
