**Proceedings of the First International Workshop on Expert Database Systems** Association for Computing Machinery. Special Interest Group on Management of Data, University of South Carolina. Institute of Information Management, Technology, and Policy, SIGART.,1984      Expert Database Systems Keith Jeffery, Keith G. Jeffery,1992 The first book of its kind to draw together information from a diverse field of methodologies this book provides database managers and computer science students alike with new invaluable information about how these methodologies can be implemented to efficiently manage an Expert Database System EDS The book explores AI VLSI and various program designs as they apply to an EDS Despite pulling together a wealth of the latest information on this rapidly expanding topic the book is well organized and presented in a user friendly style      **Expert Database Systems** Larry Kerschberg,1986      **Database**

**Systems For Advanced Applications '91 - Proceedings Of The 2nd International Symposium On Database Systems For Advanced Applications** Akifumi Makinouchi,1992-09-21 This book provides an authoritative overview of the global development of surgical paediatrics Biographical accounts of key people who developed this relatively new specialty many of whom are now household names are presented The compendium also acknowledges the enormous contribution of imaging ultrasound MRI and PET scans minimal invasive surgery and fetal surgery as well as the role of related journals and associations in the progress of surgical paediatrics Many of the contributors have been instrumental to the development of surgical paediatrics in their respective countries and have considerable worldwide influence on the management of children requiring surgical care Through their valuable insight and first hand experience this book not only shines a light on the past achievements of previous generations of paediatric surgeons but also serves as a model to encourage future generations to do likewise      Exploring Time, Tense and Aspect in Natural Language Database Interfaces Ion Androutsopoulos,2002-08-22 Advances in temporal databases make it increasingly easier to store time dependent information creating a need for facilities that will help end users access this information In the context of natural language interaction significant effort has been devoted to interfaces that allow database queries to be formulated in natural language Most of the existing interfaces however do not support adequately the notion of time Drawing upon tense and aspect theories temporal logics and temporal databases this cross discipline book examines relevant issues from the three areas developing a unified theoretical framework that can be used to build natural language interfaces to temporal databases The framework features an HPSG mapping from English to a formally defined meaning representation language and a corresponding mapping to a temporal extension of the SQL database language The book is accompanied by a freely available prototype interface built according to the framework and implemented using Prolog and ALE This is the first in depth exploration of the notion of time in natural language database interfaces It will be particularly interesting to researchers working on natural language interaction tense

and aspect HPSG temporal logics and temporal databases especially those who wish to learn about time related issues in other disciplines

**Advanced Relational Programming** F. Cacace, G. Lamperti, 2013-03-19 This volume aims to present recent advances in database technology from the viewpoint of the novel database paradigms proposed in the last decade It focuses on the theory of the extended relational model and an example of an extended relational database programming language Algres is described A free copy of Algres complements this work and is available on the Internet Audience This work will be of interest to graduate students following advanced database courses advanced data oriented applications developers and researchers in the field of database programming languages and software engineering who need a flexible prototyping platform for the development of software tools

Readings in Database Systems Joseph M. Hellerstein, Michael Stonebraker, 2005 The latest edition of a popular text and reference on database research with substantial new material and revision covers classical literature and recent hot topics Lessons from database research have been applied in academic fields ranging from bioinformatics to next generation Internet architecture and in industrial uses including Web based e commerce and search engines The core ideas in the field have become increasingly influential This text provides both students and professionals with a grounding in database research and a technical context for understanding recent innovations in the field The readings included treat the most important issues in the database area the basic material for any DBMS professional This fourth edition has been substantially updated and revised with 21 of the 48 papers new to the edition four of them published for the first time Many of the sections have been newly organized and each section includes a new or substantially revised introduction that discusses the context motivation and controversies in a particular area placing it in the broader perspective of database research Two introductory articles never before published provide an organized current introduction to basic knowledge of the field one discusses the history of data models and query languages and the other offers an architectural overview of a database system The remaining articles range from the classical literature on database research to treatments of current hot topics including a paper on search engine architecture and a paper on application servers both written expressly for this edition The result is a collection of papers that are seminal and also accessible to a reader who has a basic familiarity with database systems

*Logic Programming* I. Balbin, K. Lecot, 2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of Symbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry

Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography

**Active Database Systems** Jennifer Widom,Stefano Ceri,1995-09 Active database systems enhance traditional database functionality with powerful rule processing capabilities providing a uniform and efficient mechanism for many database system applications Among these applications are integrity constraints views authorization statistics gathering monitoring and alerting knowledge based systems expert systems and workflow management This significant collection focuses on the most prominent research projects in active database systems The project leaders for each prototype system provide detailed discussions of their projects and the relevance of their results to the future of active database systems Features A broad overview of current active database systems and how they can be extended and improved A comprehensive introduction to the core topics of the field including its motivation and history Coverage of active database trigger capabilities in commercial products Discussion of forthcoming standards *Computational Intelligence, II* G. Mauri,M. Filippini,F. Gardin,1990-06-01

The focus of this volume is Heterogeneous Knowledge and Problem Solving Integration i e the combined use of different knowledge representation and problem solving paradigms This is a central topic for the design and implementation of problem solving systems since from a pragmatic and engineering standpoint the solution of a large class of problems cannot take place within one single representation language or problem solving paradigm Heterogeneous systems represent not only a pragmatic answer but also a theoretical alternative to the homogeneous paradigms **Diagnostic Monitoring of**

**Skill and Knowledge Acquisition** Norman Frederiksen,Robert Glaser,Alan Lesgold,Michael G. Shafto,2013-07-04 An adjunct to the increased emphasis on developing students critical thinking and higher order skills is the need for methods to monitor and evaluate these abilities These papers provide insight into current techniques and examine possibilities for the future The contributors to Diagnostic Monitoring of Skill and Knowledge Acquisition focus on two beliefs that new kinds of tests and assessment methods are needed and that instruction and learning can be improved by developing new assessment methods based on work in cognitive science **Data and Knowledge Bases** Catriel Beerl,Umesh Dayal,J.W.

Schmidt,1988-10 Proceedings of the meeting held in Jerusalem Israel June 1988 Thirty papers represent a cross ssection of the many facets of contemporary database research and provide an up to date account of activities of some of the leading companies in the database field Covers knowledge based application *NASA Conference Publication* ,1990 7th Int. Conf. Industrial & En Frank D. Anger,Rita V. Rodriguez,Moonis Ali,1994-05-23 Over the years the promise of artificial intelligence has inspired many researchers and many schemes only to have incipient hopes thwarted by its complexity With each generation of computational engines a new wave of enthusiasm sweeps the community as solutions to a few problems come within reach However intractability and undecidability continue to frustrate the unwary practitioner while

unsubstantiated methodologies offer ingenious solutions that hold more promise than potential. Despite its undulate past and variegated present, AI has made solid contributions to a growing information technology. Expert systems and allied tools have become a mainstay of industrial and business organizations; intelligent interfaces have increased accessibility of computational resources; and robotic innovations have redefined the manufacturing industries. Meanwhile, research in evolutionary algorithms, neural networks, fuzzy reasoning, and other exciting approaches promise continued progress in surprising new directions. These proceedings record the latest results of industrial, commercial, military, and academic artificial intelligence exploration. Seventy-seven papers, divided into twenty different areas, document a significant slice of this broad and exciting field. Although dozens of themes are treated in the papers, the topical divisions of this volume comprise: The Software Engineering AI Interface, Knowledge Based Systems, Temporal Reasoning, Machine Learning, Robotics, Intelligent Databases, Planning, Expert Systems Applications, Search Techniques, Genetic and Evolutionary Methods, Design, Qualitative Reasoning, Neural Networks, Knowledge Representation, Application Paradigms, Fuzzy and Pattern Recognition, Reasoning about Physical Systems, Parallel and Distributed AI, and Diagnostic Systems.

**The TSQL2 Temporal Query Language** Richard T. Snodgrass, 2012-12-06 Temporal databases have been an active research topic for at least fifteen years. During this time, several dozen temporal query languages have been proposed. Many within the temporal database research community perceived that the time had come to consolidate approaches to temporal data models and calculus-based query languages to achieve a consensus query language and associated data model upon which future research can be based. While there were many query language proposals with a diversity of language and modeling constructs, common themes kept resurfacing. However, the community was quite fragmented, with each research project being based on a particular and different set of assumptions and approaches. Often these assumptions were not germane to the research per se but were made simply because the research required a data model or query language with certain characteristics with the particular one chosen rather arbitrarily. It would be better in such circumstances for research projects to choose the same language. Unfortunately, no existing language had attracted a following large enough to become the one of choice. In April 1992, Richard Snodgrass circulated a white paper that proposed that a temporal extension to SQL be produced by the research community. Shortly thereafter, the temporal database community organized the ARPA NSF International Workshop on an Infrastructure for Temporal Databases, which was held in Arlington, TX, in June 1993.

*Cognitive Science and Its Applications for Human-computer Interaction* Raymonde Guindon, 2013-08-21 The field of human-computer interaction is striving to provide the conceptual foundations for designing computer tools and the environment needed to perform increasingly more complex and specialized tasks. To achieve this goal, human-computer interaction must rely on the meeting of specialized expert minds. Each of the research projects presented in this book investigate some critical question on the path of progress in human-computer interaction. These projects would not have been feasible without the multidisciplinary of the research team or of the

researchers themselves      Databases In The 1990s: 2 - Proceedings Of The 2nd Australian Databases- Information Systems Conference B Srinivasan, John Zeleznikow, 1991-06-14 These proceedings record the research and experiences of various researchers from Australia and other countries in databases and information systems The papers were selected based on their originality content relevance and style Topics discussed include advanced database applications information analysis and data modelling object oriented DBMS distributed heterogeneous and parallel database systems information resource planning and management etc      **Logic Grammars** Harvey Abramson, Veronica Dahl, 2012-12-06 Logic grammars have found wide application both in natural language processing and in formal applications such as compiler writing This book introduces the main concepts involving natural and formal language processing in logic programming and discusses typical problems which the reader may encounter proposing various methods for solving them The basic material is presented in depth advanced material involving new logic grammar formalisms and applications is presented with a view towards breadth Major sections of the book include grammars for formal language and linguistic research writing a simple logic grammar different types of logic grammars applications and logic grammars and concurrency This book is intended for those interested in logic programming artificial intelligence computational linguistics Fifth Generation computing formal languages and compiling techniques It may be read profitably by upper level undergraduates post graduate students and active researchers on the above named areas Some familiarity with Prolog and logic programming would be helpful the authors however briefly describe Prolog and its relation to logic grammars After reading Logic Grammars the reader will be able to cope with the ever increasing literature of this new and exciting field
