Expert Systems Petrică Vizureanu, 2010-01-01 Expert systems represent a branch of artificial intelligence aiming to take the experience of human specialists and transfer it to a computer system The knowledge is stored in the computer which by an execution system inference engine is reasoning and derives specific conclusions for the problem The purpose of expert systems is to help and support user's reasoning but not by replacing human judgement In fact expert systems offer to the inexperienced user a solution when human experts are not available This book has 18 chapters and explains that the expert systems are products of artificial intelligence branch of computer science that seeks to develop intelligent programs What is remarkable for expert systems is the applicability area and solving of different issues in many fields of architecture archeology commerce trade education medicine to engineering systems production of goods and control diagnosis problems in many industrial branches *Handbook of Expert Systems in Manufacturing* Rex Maus, Jessica Keyes, 1991 Contributors from major corporations present case histories of expert systems and neural networks presently implemented in manufacturing applications for readers interested in manufacturing technology but not necessarily with any background in expert systems or computers in general Assesses various techniques and strategies for system development and implementation and return on investment Acidic paper Annotation copyrighted by Book News Inc Portland OR **Computer Integrated Manufacturing (Iccim '91): Manufacturing Enterprises Of The 21st Century - Proceedings Of The International Conference** B S Lim, 1991-10-02 In the 21st century computer integrated manufacturing CIM systems will not only be the economic development tools but will also be the essential means of achieving a higher level of flexibility cohesiveness and performance CIM systems are beginning to settle into our society and industries with greater emphasis on the integration of economic cultural and social aspects together with design planning factory automation and artificial intelligent systems This volume of proceedings brings together 10 keynote and invited speaker addresses and over 180 papers by practitioners from 28 countries It documents current research and in depth studies on the fundamental aspects of advanced CIM systems and their practical applications The papers fall into 3 main sections CIM Related Issues Industrial AI Applications Aspects and Concurrent Engineering Advanced Design Simulation and Flexible Manufacturing Systems

**Materials Processes** Isaac Minkoff, 2012-12-06 This book is designed to give a short introduction to the field of materials processes for students in the different engineering and physical sciences It gives an overall treatment of processing and outlines principles and techniques related to the different categories of materials currently employed in technology It should be used as a first year text and a selection made of the contents to provide a one or two term course It is not intended to be fully comprehensive but treats major processing topics In this way the book has been kept within proportions suitable as an introductory course The text has been directed to fundamental aspects of processes applied to metals ceramics polymers glassy materials and composites An effort has been made to cover as broad a range of processes as

possible while keeping the treatment differentiated into clearly defined types For broader treatments a comprehensive bibliography directs the student to more specialised texts In presenting this overall view of the field of processes the text has been brought into line with current teaching in the field of materials The student of engineering in this way may see the challenge and the advances made in applying scientific principles to modern processing techniques This type of presentation may also be the more exciting one
