Intelligent knowledge based systems in electrical power engineering J.R. McDonald, Stephen McArthur, Graeme Burt, Jerry Zielinski, 2012-12-06 Intelligent Knowledge Based Systems in Electrical Power Engineering details how intelligent applications can be used in the power industry The book gives a general and historical overview of intelligent knowledge based systems IKBS and artificial intelligence AI and a broad analysis of the application of these techniques in the electrical power industry It includes chapters on forecasting and planning in power systems design of electrical plant and systems IKBS in condition monitoring alarm processing event and fault diagnosis and an analysis of future trends in IKBS for power engineering No previous knowledge of IKBS is assumed but an appreciation of electrical transmission and distribution systems would be useful

Topics in Expert System Design C. Tasso, G. Guida, 2014-06-28 Expert Systems are so far the most promising achievement of artificial intelligence research Decision making planning design control supervision and diagnosis are areas where they are showing great potential However the establishment of expert system technology and its actual industrial impact are still limited by the lack of a sound general and reliable design and construction methodology This book has a dual purpose to offer concrete guidelines and tools to the designers of expert systems and to promote basic and applied research on methodologies and tools It is a coordinated collection of papers from researchers in the USA and Europe examining important and emerging topics methodological advances and practical experience obtained in specific applications Each paper includes a survey introduction and a comprehensive bibliography is provided *Expert Systems in ARL*

reasoning and practical applications of expert systems in industry and decision support *Expert Systems in Environmental Planning* Jeff R. Wright, Lyna L. Wiggins, Ravinder K. Jain, T. John Kim, 2012-12-06 The connections between economics planning and the environment are receiving increased attention among scholars and policy makers in many countries The common denominator among these three variables is the earth's life support systems the ecosystems on which the world depends When we describe our physical surroundings as a collection of possible uses we are establishing linkages between economics planning and the environment Because possible alternative uses compete with each other and conflicts arise over scarce land resources the varying environmental impacts of alternative uses are major concerns for the current as well as the next generation How to achieve sustainable development is the pressing question for today's environmental professionals Environmental planners and engineers help us study the implications of our choices and new technologies and techniques that improve the practice of environmental planning should enhance our ability to protect our future The depletion of the earth's natural resources and loss of biodiversity the degradation of air land and water quality the accumulation of greenhouse gases leading to changes in our climate and the depletion of the ozone layer comprise only a partial list of environmental issues that concern our policy makers To support their decisions environmental planning must be a multidimensional and multidisciplinary activity that incorporates social economic political geographical and technical factors Solutions for problems in these areas frequently require not only numerical analyses but also heuristic analyses which in turn depend on the intuitive judgements of planners and engineers **General Technical Report NC.** ,1981 **Scientific and Technical Aerospace Reports** ,1992 Scientific Computing and Automation (Europe) 1990 E.J.
