Expert System Development in Prolog and Turbo-Prolog Peter R. Smith,1988 **The Application of Expert Systems in Libraries and Information Centres** Anne Morris,2011-09-12 No detailed description available for The Application of Expert Systems in Libraries and Information Centres Expert Systems in ARL Libraries ,1991 Handbook of VLSI Chip Design and Expert Systems A. F. Schwarz,2014-05-10 Handbook of VLSI Chip Design and Expert Systems provides information pertinent to the fundamental aspects of expert systems which provides a knowledge based approach to problem solving This book discusses the use of expert systems in every possible subtask of VLSI chip design as well as in the interrelations between the subtasks Organized into nine chapters this book begins with an overview of design automation which can be identified as Computer Aided Design of Circuits and Systems CADCAS This text then presents the progress in artificial intelligence with emphasis on expert systems Other chapters consider the impact of design automation which exploits the basic capabilities of computers to perform complex calculations and to handle huge amounts of data with a high speed and accuracy This book discusses as well the characterization of microprocessors The final chapter deals with interactive I O devices This book is a valuable resource for system design experts circuit analysts and designers logic designers device engineers technologists and application specific designers Expert systems development in Turbo-Prolog ,1987 *Expert Systems and Decision Support in Medicine* Otto Rienhoff,Ursula Piccolo,Berthold Schneider,2012-12-06 The 33rd Annual Meeting of the German Association for Medical Documentation Informatics and Statistics was combined with a Special Topic Conference of the European Federation for Medical Informatics and takes place at Hannover F R of Germany from September 26 to 29 1988 It was planned and initililly prepared by the late Prof P L Reichertz who headed the Hannover institute from 1969 to 1987 To commemorate his contribution to the development of medicine the conference was devoted to him Peter Reichertz Memorial Conference on Expert Systems and Decision Support in Medicine Since computers in the early Fifties were first applied to support medical reasoning various phases of euphoria and resi ation have followed Every new methodology which became technically possible was and will be applied to the old questlon of how to diagnose diseases more reliably Artificial Intelligence is just one new approach to the old challenge Over the years some authors have been very optimistic and put forward opinions which motivated the common press to coin the phrase Dr med computer Papers printed under this heading rebuffed the majority of physiCians for many years Today we know that medical decision making is a most complex buman performance And 30 years of research on decision support have given us only limited insight into the underlying processes Most of the principal methodological questions were already asked very early on Building Knowledge-Based Systems for Natural Resource Management Daniel L. Schmoldt,H. Michael Rauscher,2012-12-06 If one were forced to use a single key word to describe the decade of the 1980 s a very prominent one would be technology Leading the forefront of tech nology advancement were breakthroughs in electronics Devices that were uncommon or unknown in

1980 became commonplace and almost indispensable by 1989. This trend has continued into the 1990s and it does not seem to be abating in any way. Microwave ovens, video recorders, telephone answering machines, compact disc players, computers and a host of smaller or less sophisticated devices now appear in most households. The development of small and inexpensive computers, i.e., personal computers, has placed computing resources within reach of many more people. In addition, many traditional and largely mechanical devices have been enhanced by electronics. For example, specialized microprocessors are combined with arrays of electronic sensors to control and monitor sophisticated engineering components in most new automobiles. In this and many other ways we are touched by the new electronics in almost every aspect of our daily lives. Initially, personal computers were little more than toys. They contained only a small fraction of the computing power of their immediate ancestors, the mini computers and mainframe computers. However, rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components. During the same time, processor speed and sophistication increased.
