Choi,2005-06-23 In recent years there has been increasing discontent with the abstract nature of mainstream economics Not only does this make the subject less relevant to real issues it drives a wedge between economics and other disciplines ostensibly addressing the same issues *Borderlands of Economics* explores the ways in which economics might be reconnected both with the real world and with other disciplines *Evolutionary Economics* Esben Sloth Andersen,2013-09-13 First Published in 1996 Routledge is an imprint of Taylor Francis an informa company

The Elgar Companion to Recent Economic Methodology J. B. Davis,2011-01-01 Economic methodology has traditionally been associated with logical positivism in the vein of Milton Friedman Karl Popper Imre Lakatos and Thomas Kuhn However the emergence and proliferation of new research programs in economics have stimulated many novel developments in economic methodology This impressive Companion critically examines these advances in methodological thinking particularly those that are associated with the new research programs which challenge standard economic methodology Bringing together a collection of leading contributors to this new methodological thinking the authors explain how it differs from the past and point towards further concerns and future issues The recent research programs explored include behavioral and experimental economics neuroeconomics new welfare theory happiness and subjective well being research geographical economics complexity and computational economics agent based modeling evolutionary thinking macroeconomics and Keynesianism after the crisis and new thinking about the status of the economics profession and the

Economics,Y. Aruka,2011-06-27 In March 1997 we launched the Japan Association for Evolutionary Economics JAFEE to gather the academic minds that out of dissatisfaction with established dynamic approaches were separately searching for new approaches to economics To our surprise and joy as many as 500members including graduate students joined us Later that year Prof Horst Hanusch then President of the International oseph A Schumpeter Society remarked that such a start would take a couple of decades in Europe to prepare for Since then we have been developing our activities incessantly not only in terms of the number of members but also in terms of the intensity of international academic exchange Originally the planning of this book came about as the successful outcome of our fourth annual conference organized as an international one JAFEE 2000 Incorporat ing other international contributions related to our preceding conferences this book has eventually turned out to be one of the most enterprising anthologies on evolu tionary economics ever published Specifically it contains excellent papers on such topics as streams of evolutionary economics evolutionary nonlinear dynamics experimental economics and evolution multiagent systems and complexity new frontiers for evolutionary economics and economic heresies In short this book will provide a vivid and full fledged picture of up to date evolutionary economics Economics and the Social Sciences Stavros Ioannides,Klaus Nielsen,2007-01-01 This book is based on the premise that mainstream economics

has become excessively specialized and formalized entering a state of de facto withdrawal from the study of the economy in favour of exercises in applied mathematics The editors believe that there is much scope for synergies by engaging in an encounter with economics and the other social sciences The chapters in this book offer important new contributions to such a development A select group of highly regarded contributors illustrate the potentially enlightening relationship between economics and a wide range of social science disciplines In addition some important concepts for economic analysis for example the notion of routines of social capital and of flexibility are explored from the vantage point of several social sciences Postgraduate students in most social science disciplines and in economic sociology will find much to interest them in this

Austrian Economics: Tensions and New Directions Bruce J. Caldwell, Stephan Böhm, 2012-12-06 When we first invited the group of distinguished scholars represented here to contribute to a new volume on Austrian economics four themes were stressed tensions new directions selectivity and criticism In this brief introduction we will explain why those themes were emphasized and thereby shed light on our intentions and aspirations for the volume The subtitle Tensions and New Directions indicates clearly the intent of the volume desired If we take the 1871 publication of Carl Menger's Principles of Economics Grundsätze der Volkswirtschaftslehre as marking its birth the Austrian tradition is now well over one hundred years old The origins of the so called Austrian Revival are more difficult to pinpoint precisely but many would accept two decades as a reasonable estimate of its lifespan In any case since the mid 1970s several collections of articles written by Austrians have been published The intent of these collections appeared to be to educate persuade and inspire various audiences Uninformed readers needed to be told about the specifics of the Austrian position to be shown how it differed from and improved upon its rivals The initiated needed to be reassured that their commitment to a novel program was justified As such much of the recent Austrian literature has consisted either of exegetical accounts of the views of past figures or of critical assessments of the positions of alternative research programs in economics from an Austrian perspective

Computational Techniques for Modelling Learning in Economics Thomas Brenner, 2012-12-06 Computational Techniques for Modelling Learning in Economics offers a critical overview of the computational techniques that are frequently used for modelling learning in economics It is a collection of papers each of which focuses on a different way of modelling learning including the techniques of evolutionary algorithms genetic programming neural networks classifier systems local interaction

models least squares learning Bayesian learning boundedly rational models and cognitive learning models Each paper describes the technique it uses gives an example of its applications and discusses the advantages and disadvantages of the technique Hence the book offers some guidance in the field of modelling learning in computation economics In addition the material contains state of the art applications of the learning models in economic contexts such as the learning of preference the study of bidding behaviour the development of expectations the analysis of economic growth the learning in the repeated prisoner s dilemma and the changes of cognitive models during economic transition The work even includes innovative ways of modelling learning that are not common in the literature for example the study of the decomposition of task or the modelling of cognitive learning

Is There a Future for Heterodox Economics? Geoffrey M. Hodgson, 2019 Over the last 50 years the community of heterodox economists has expanded and its publications have proliferated But its power in departments of economics has waned Addressing this paradox this book argues that heterodox economists are defined more by left ideology than by a shared understanding of the nature of orthodox economics and of what should replace it Heterodox economists cannot agree on what heterodoxy means This volume applies work on the social nature and institutions of science to help explain the failure of heterodox economics to gain ground It assesses some strategic options for its future

The State of Economics, the State of the World Kaushik Basu, David Rosenblatt, Claudia Sepulveda, 2025-02-04 Leading economists address the ongoing challenges to economics in theory and practice in a time of political and economic crises More than a decade of financial crises sovereign debt problems political conflict and rising xenophobia and protectionism has left the global economy unsettled and the ability of economics as a discipline to account for episodes of volatility uncertain In this book leading economists consider the state of their discipline in a world of ongoing economic and political crises The book begins with three sweeping essays by Nobel laureates Kenneth Arrow in one of his last published works Amartya Sen and Joseph Stiglitz that offer a summary of the theoretical foundations of modern economics the twin pillars of general equilibrium theory and welfare economics Contributors then turn to macroeconomic stabilization and growth and finally new areas of research that depart from traditional theory methodology and concerns climate change behavioral economics and evolutionary game theory The 2019 Nobel Prize laureates Abhijit Banerjee Esther Duflo and Michael Kremer contribute a paper on the use of randomized control trials in development economics

political and intellectual life *Fairness in Bargaining and Markets* Christian Korth, 2009-07-25 This book focuses on economic bargaining theory Economic bargaining theory seeks to predict the outcomes of bargaining situations In such situations governments or individuals share a mutual interest in cooperation however they also have conflicting interests regarding the terms of an agreement A classic example of such a situation is wage bargaining between unions and employers More commonplace examples also exist For instance a discussion between partners on how to spend an evening can be understood as a bargaining situation Economic bargaining theory explores the relationship between bargaining situations and the outcomes of the bargaining Economists have two primary reasons to show interest in this relationship The first reason is that many important human interactions including economic interactions are bargaining situations The second reason is that the understanding of these situations may inform the economic theory of markets The tool utilized in this study is the mathematical theory of games Predictions for bargaining outcomes are developed by modeling the bargaining situation as a strategic game and using game theoretic equilibrium concepts in order to solve the game In this approach the specific bargaining outcome depends on the assumptions underlying the model The neoclassical and fundamental assumption is that of rational agents called economic men who strive to maximize their utility based on stable preferences
