Models and Methods in Social Network Analysis Peter J. Carrington, John Scott, Stanley Wasserman, 2005-02-07 Models and Methods in Social Network Analysis first published in 2005 presents the most important developments in quantitative models and methods for analyzing social network data that have appeared during the 1990s Intended as a complement to Wasserman and Faust's Social Network Analysis Methods and Applications it is a collection of articles by leading methodologists reviewing advances in their particular areas of network methods Reviewed are advances in network measurement network sampling the analysis of centrality positional analysis or blockmodelling the analysis of diffusion through networks the analysis of affiliation or two mode networks the theory of random graphs dependence graphs exponential families of random graphs the analysis of longitudinal network data graphical techniques for exploring network data and software for the analysis of social networks

Generalized Blockmodeling Patrick Doreian, Vladimir Batagelj, Anuska Ferligoj, 2005 This book provides an integrated treatment of blockmodeling the most frequently used technique in social network analysis It secures its mathematical foundations and then generalizes blockmodeling for the analysis of many types of network structures Examples are used throughout the text and include small group structures little league baseball teams intra organizational networks inter organizational networks baboon grooming networks marriage ties of noble families trust networks signed networks Supreme Court decisions journal citation networks and alliance networks Also provided is an integrated treatment of algebraic and graph theoretic concepts for network analysis and a broad introduction to cluster analysis These formal ideas are the foundations for the authors proposal for direct optimizational approaches to blockmodeling which yield blockmodels that best

fit the data a measure of fit that is integral to the establishment of blockmodels and creates the potential for many generalizations and a deductive use of blockmodeling
