Destined for the Stars Catherine L. Newell,2019-06-05 Where did humanity get the idea that outer space is a frontier waiting to be explored Destined for the Stars unravels the popularization of the science of space exploration in America between 1944 and 1955 arguing that the success of the US space program was due not to technological or economic superiority but was sustained by a culture that had long believed it was called by God to settle new frontiers and prepare for the inevitable end of time and God s final judgment Religious forces Newell finds were in no small way responsible for the crescendo of support for and interest in space exploration in the early 1950s well before Project Mercury the United States first human spaceflight program began in 1959 In this remarkable history Newell explores the connection between the art of Chesley Bonestell the father of modern space art whose paintings drew inspiration from depictions of the American West and the popularity of that art in Cold War America Bonestell s working partnership with science writer and rocket expert Willy Ley and Ley and Bonestell s relationship with Wernher von Braun father of both the V 2 missile and the Saturn V rocket whose millennial conviction that God wanted humankind to leave Earth and explore other planets animated his life s work Together they

inspired a technological and scientific faith that awoke a deep seated belief in a sense of divine destiny to reach the heavens The origins of their quest Newell concludes had less to do with the Cold War strife commonly associated with the space race and everything to do with the religious culture that contributed to the invention of space as the final frontier *Explorers on the Moon* Hergé,1976-09 Tintin and his friends are involved in the first manned flight to the moon which proves perilous

Exploration Joel S. Levine,2021-01-12 When the Apollo 11 astronauts landed on the Moon on July 20 1969 they made a very important discovery During their landing on the surface of the Moon the exhaust gases released from the Lunar Module landing rockets caused large amounts of surface dust to move into the thin lunar atmosphere causing obscuration of the lunar surface Once they landed they found that the surface of the Moon was covered with several inches of very fine tiny particles composed of sharp glassy material The lunar dust stuck to everything it came in contact with and once on the lunar surface the dust eroded their spacesuits caused overheating on equipment and instrumentation compromised seals on their spacesuits and on lunar sample collecting boxes irritated their eyes and lungs and generally coated everything very efficiently On the return to Earth in the Apollo Command Module lunar dust inadvertently brought aboard floated freely in their cabin causing problems Now 50 years later humans will return to the Moon in the Artemis Program as early as 2024 This book summarizes what we know about lunar dust its structure and chemical composition its impact on human health and how to reduce mitigate its effects on future human exploration The four dozen contributors to the 14 chapters in the book are planetary scientists engineers mission planners medical researchers and physicians from NASA and the European Space Agency ESA as well as universities and industry from the United States Australia Germany Italy the Netherlands Portugal and Sweden **Leadership in Space** Michael Douglas Griffin,2008 NOTE NO FURTHER DISCOUNT FOR THIS PRINT
