Reading and Its Difficulties M. D. Vernon, 2010-06-24 Originally published in 1971 this book constitutes a scientific enquiry into the basis of reading and dyslexia Professor Vernon considers visual perception reasoning motivation and outlines work in psycholinguistics in order to define the basic psychological processes involved in learning to read She also discusses the problem of specific developmental dyslexia and concludes that the basic deficiency may lie in the processes of conceptual reasoning between the sequence of printed and sounded letters A fundamental disfunction of the brain is also seen as a possibility She stresses the importance of early recognition and remedial treatment of reading difficulties since these may be alleviated if not entirely overcome by suitable treatment

Intersensory Perception and Sensory Integration Richard D. Walk,Herbert L. Pick,2013-03-08 This volume on intersensory perception and sensory integration is the second volume of the series Perception and Perceptual Development A Critical Review Series The topic of the volume is timely for in recent years many investigators have noted that information about any natural event is obtained by a perceiver from a variety of sources Such an observation immediately leads to the question of how this information is synthesized and organized Of course the implication that there are several discrete input channels that must be processed has come under immediate attack by researchers such as the Gibsons They find it extremely artificial to regard natural information as being cut up and requiring cementing Nevertheless the possibility that during ontogenesis perception involves the integration of separate information has attracted the attention of scholars concerned with both normal and abnormal development In the case of normal development a lively controversy has arisen between those who believe perceptual development goes from integration toward differentiation and those who hold the opposite view In the case of abnormal psychological development such as learning disabilities many workers have suggested that perceptual integration is at fault In thinking about the issues raised in this volume we are particularly indebted to our former teachers and colleagues Eleanor and James Gibson T A Ryan Robert B MacLeod and Jerome Bruner We are pleased to acknowledge the secretarial help of Karen Weeks in the preparation of this volume **Cumulated Index Medicus** ,1996
