*Techniques in Mineral Exploration* J.H. Reedman, 2012-12-06 For some years I have felt there was a need for a single comprehensive reference book on exploration geology Numerous textbooks are available on subjects such as geophysical prospecting exploration geochemistry mining geology photogeology and general economic geology but for the geologist working in mineral exploration who does not require a specialist's knowledge a general book on exploration techniques is needed Many undergraduate university courses tend to neglect economic geology and few deal with the more practical aspects in any detail Graduate geologists embarking on a career in economic geology or mineral exploration are therefore often poorly equipped and have to learn a considerable amount on the job By providing a book that includes material which can be found in some of the standard texts together with a number of practical aspects not to be found elsewhere I hope that both recent graduates and more experienced exploration geologists will find it a useful reference work and manual In addition students of economic geology and personnel working in related fields in the mining and mineral extraction industries will find it informative J H REEDMAN v Acknowledgements The author would like to thank Dr K Fletcher geochemist with the Department of Geology University of British Columbia and Kari Savario geophysicist with Finnish Technical Aid to

Zambia for reading the original drafts and offering constructive criticism and advice on the chapters on geochemical and geophysical prospecting respectively

**Seismic Exploration Methods** Ray L. Sengbush, 2012-12-06 This book describes the seismic methods used in geophysical exploration for oil and gas in a comprehensive non rigorous mathematical manner I have used it and its predecessors as a manual for short courses in seismic methods and it has been extensively revised time and again to include the latest advances in our truly remarkable science I once called it Advanced Seismic Interpretation but the geophysicists who attended the courses always wondered when I was going to start discussing interpretation They discovered at the end that I never did discuss interpretation as they knew it No mention was made of reflection picking plotting times mapping

contouring and things they already knew perfectly well Instead I discussed Fourier transforms sampling theory impulse responses distortion operators Wiener filters noise in  $f$   $k$  space velocity spectra wave equation migration and direct detection of hydrocarbons as each of these topics appeared on the seismic scene I wanted the geophysicists to think beyond the routine of interpretation to develop a better understanding of why seismic sections look as they do to have a better feel for what digital processing is doing for good or evil to the seismic data I attempted to stretch their minds Whitehead said it best A mind once stretched by a new idea can never shrink to its former dimension May this book be a successful mind stretcher R
