Echo and Reverb Peter Doyle, 2024-08-06 Winner of the Association for Recorded Sound Collections ARSC Award for Excellence in Historical Recorded Sound Research 2006 *Echo and Reverb* is the first history of acoustically imagined space in popular music recording. The book documents how acoustic effects reverberation room ambience and echo have been used in recordings since the 1920s to create virtual sonic architectures and landscapes. Author Peter Doyle traces the development of these acoustically created worlds from the ancient Greek myth of Echo and Narcissus to the dramatic acoustic architectures of the medieval cathedral the grand concert halls of the 19th century and those created by the humble parlor phonograph of the early 20th century and finally the revolutionary age of rock n roll. Citing recordings ranging from Gene Austin's *My Blue Heaven* to Elvis Presley's *Mystery Train* Doyle illustrates how non musical sound constructs with all their rich and contradictory baggage became a central feature of recorded music. The book traces various imagined worlds created with synthetic echo and reverb the heroic landscapes of the cowboy west the twilight shores of south sea islands the uncanny alleys of dark cityscapes the weird mindspaces of horror movies the private and collective spaces of teen experience and the funky juke joints of the mind.

Engaging Smithsonian Objects through Science, History, and the Arts Mary Jo Arnoldi, 2016-01-05 How do we come to know the world around us? What about worlds apart from our own outer space distant cultures or even long past eras of history? *Engaging Smithsonian Objects through Science History and the Arts* explores these questions and suggests an answer: we come to know our world and worlds apart through the objects that represent them. Objects are a window and by looking through them we can learn and understand more about the people who made them and the time and place they came from. In the pursuit of this understanding museums are invaluable: they are repositories not just of things but also of past present and future knowledge. *Engaging Smithsonian Objects* puts these ideas into practice using objects to bring us to new knowledge and showing how museums support us in the endeavor. The book is organized around ten objects from the

Smithsonian's vast collections. Some of the objects are iconic: the Ruby Slippers from *The Wizard of Oz* or three Stradivarius string instruments, while others are more ordinary though no less interesting: an Iron Lung or a Hawaiian gourd drum. Two different authors with expertise in different academic disciplines write about each object from their unique professional and personal perspective. Both the authors and the ten featured objects represent a range of academic disciplines from art to anthropology to geology. Taken together, the twenty essays in the book demonstrate just how much we can learn from objects by considering their kaleidoscopic meaning and significance from a variety of viewpoints. The book's interdisciplinary engagement with objects was inspired by the Smithsonian Material Culture Forum, now in its twenty-sixth year. For students of material culture and museum studies, this book illustrates the vitality and value of exploring material culture through the lens of intersecting disciplinary perspectives. For students of curiosity and lifelong learning, this book offers a lively and thoughtful look into the Smithsonian's collection and the many vibrant worlds it represents. Richly illustrated with color plates and photographs throughout, *Engaging Smithsonian Objects through Science, History, and the Arts* is a beautiful and stimulating answer to the question: How do we know our world, and how can we know more?
