Exploring Social Behavior Investigations In Social Psychology:

Exploring Social Behavior James A. Schellenberg, Frank O. Taylor, **Exploring Social Behavior** James A. Schellenberg, 1993 **Exploring Social Psychology** Robert A. Baron, Donn Byrne, 2000-08 *Social Psychology* Prof. Dr. Bilal Semih Bozdemir, Social psychology a vibrant and evolving field occupies a unique niche within the broader domains of psychology and social sciences It promises a profound understanding of how individual thoughts feelings and behaviors are shaped by social influences This chapter will delineate the definitions of social psychology explore its core scope and illustrate its significance in understanding human interactions Definition of Social Psychology At its core social psychology is the scientific study of how individuals perceive themselves in relation to others how they are influenced by the social context and how their behaviors are shaped by the presence of others whether those others are real imagined or implied Allport 1954 defined social psychology as the scientific attempt to understand and explain how the thoughts feelings and behaviors of individuals are influenced by the actual imagined or implied presence of other human beings This definition encapsulates three essential components of social psychology the individual the social context and the interaction between the two Furthermore social psychology is distinguished from other branches of psychology by its emphasis on the social environment While other psychological disciplines such as clinical or developmental psychology may focus on individual differences social psychology seeks to understand how social situations and group dynamics shape behaviors universally The field investigates phenomena ranging from interpersonal relationships and group behavior to organizational dynamics and cultural differences

What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr, 2016-09-28 Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the

social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one's interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also welcomed submissions of meta-analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field
