Exploring Cats: Their Behaviors and Human-Cat Interactions Lynette Arnason Hart,Benjamin Hart,Emma Kathryn Grigg,Leslie Ann Lyons,Dennis Clair Turner,2023-12-27 Cats exceed dogs in their numbers as companion animals in the U S and much of Europe despite them not filling working roles In the past their prowess as mousers on farms sometimes made them essential but these days many cats lead leisurely lives in people s homes What accounts for them becoming such appreciated family members What are their behaviors that are so enticing Exactly how do they respond to us When are they preferred companion animals more than dogs What do we know about cultural differences in views about cats Their growing popularity and the relative paucity of data about owned cats living in homes emphasizes the importance of monitoring their welfare The anthrozoological research literature on companion animals includes extensive studies of dogs while contributing relatively few close looks at the special behaviors and traits of domestic cats that make them so desirable as companions We know little about the dynamics of our interactions with cats and the attachment shared with them which may differ in some ways for those we have with dogs Nor have we identified the specific contexts where cats are particularly or uniquely compatible How does the type of attachment affect and shape the bond relationship between human and cat How are cats as emotional support animals for people with

special needs especially autism What new information do we have about the cognitive abilities of domestic cats and how these abilities shape cats behavior and relationships with humans How do early life experiences of cats influence their behavior as adults or their successful integration into human households Do cats fit best in certain residential settings or with specific types or ages of people This Research Topic provides an opportunity to update our understanding on the special qualities and behaviors of cats and to scrutinize our mutual interactions with these companions **Let's Explore Words!**

Beyond the Cognitive Map A. David

Redish,1999 There are currently two major theories about the role of the hippocampus a distinctive structure in the back of the temporal lobe One says that it stores a cognitive map the other that it is a key locus for the temporary storage of episodic memories A David Redish takes the approach that understanding the role of the hippocampus in space will make it possible to address its role in less easily quantifiable areas such as memory Basing his investigation on the study of rodent navigation one of the primary domains for understanding information processing in the brain he places the hippocampus in its anatomical context as part of a greater functional system Redish draws on the extensive experimental and theoretical work of the last 100 years to paint a coherent picture of rodent navigation His presentation encompasses multiple levels of analysis from single unit recording results to behavioral tasks to computational modeling From this foundation he proposes a novel understanding of the role of the hippocampus in rodents that can shed light on the role of the hippocampus in primates explaining data from primate studies and human neurology The book will be of interest not only to neuroscientists and psychologists but also to researchers in computer science robotics artificial intelligence and artificial life
