Competencies Mary Kasindorf, 1990-12 Everyone in the field of Early childhood Education should be aware of what constitutes a good early childhood education program Although each individual will work with children in their own way there is a common basis of competency that should be expected of all teachers Competencies is divided into six competency areas and 13 functional areas of competence as identified by the CDA National Credentialing Program for center based teachers of your children As you work through the learning activities developing curriculum materials bibliographies observational records etc you will be developing materials which can also be used in assembling your portfolio and documenting your competence for the CDA credential You can also use Competencies as a guide in self study and training recording teacher activities reading resources and utilizing activities designed to determine the areas and methods in which you feel you are functioning effectively or those that you may wish to change or improve

The Silent Language of Psychotherapy William Zimmerman, 2017-07-12 Therapeutic changes occur in many places and among animals as well as humans A theory that attempts to explain therapeutic changes should be based on principles that apply not only to those changes occurring during the hour but also to those observed in the educational process in interpersonal relations and in the social milieu as well as with animals It would be desirable to discover principles broad enough to provide a deeper understanding of therapeutic change in this wide variety of situations Experienced therapists appear to be similar in what they are doing although they may disagree as to why they do it In spite of the arguments about theoretical formulations it can be observed that during an hour with a patient many psychotherapists may not follow their own theories too well There probably is some relevance in a comparison of psychotherapy with a concept formation test the subject gives the correct answers but is unable to state why he did so or what principles he followed in making his choices The therapist too may help a patient but he is often uncertain as to why and how It is very likely that the effective principles in therapeutic work rest on processes that are more general than the specific principles advanced by different schools This volume combines the

elements of psychodynamic and cognitive behavioral therapy in a theoretical system that focuses on the importance of patient therapist interaction especially in terms of the exchange of subtle or covert communication cues In this significantly updated and expanded edition of their classic text Beier and Young analyze recent developments in new areas of practice facing today's therapist managed care and the clinical impact of the control of healthcare delivery and biological intervention and other issues related to psychotropic medication

Intersections With Attachment Jacob L. Gewirtz, William M. Kurtines, Jacob L. Lamb, 2013-05-13 Attachment has long been a key area of social development Work on attachment processes has involved a variety of species as well as humans in diverse cultures and at various points in the life cycle This volume presents research devoted to the meaning and implications of the attachment concept including possible indices of attachment the role of learning whether or not attachment is best treated as continuous or discontinuous and considerations for viewing attachment as a trait across environmental settings or as a process with functions that operate differently in disparate settings Other psychological process concepts such as imprinting relationships and identification are also discussed Because the contributors are active researchers and theorists this volume may help establish trends and determine directions to shape literature on attachment for years to come
