Exploring the Solar System

Our first Solar System mission with other space agencies from the 1960s to the 1990s was the Voyager mission. The spacecraft was launched in 1977 and has since then been the only spacecraft to have visited all four gas giants and to have left the Solar System.

After Voyager, a number of other spacecraft have been launched to study the Solar System. These include the Mars Global Surveyor, the Mars Reconnaissance Orbiter, the Cassini-Huygens mission to Saturn, and the New Horizons mission to Pluto.

ESA has also launched several missions to study the Solar System, including the Rosetta mission to comet 67P/Churyumov-Gerasimenko.

ESA is also planning to launch the JUICE mission to Jupiter in 2023, and the BepiColombo mission to Mercury in 2025.

ESA is also planning to launch the Earth Explorer mission to study the Earth's environment, and the Solar Orbiter mission to study the Sun.

ESA is also planning to launch the ExoMars mission to Mars in 2020, and the Lunar Gateway mission to the Moon in 2024.
