**Biology and Emotion** Neil McNaughton, 1989-07-13 There have been rapid and important advances in all behavioural sciences in recent years These advances have in one sense been very diverse and specialised sufficiently so for a scientist to quickly lose touch with the current concerns of even neighbouring researches but in some cases the developments have seemed also to be fundamental and perhaps convergent with implications across a range of disciplines In either case there is a real and increasing need for scientists to communicate their discoveries and to a new generation of students in their own Problems in the Behavioural Sciences is designed to meet this need The books are by leading researchers and deal with problems or topics that are attracting a special current interest The central subject matter is psychology but many of the issues will need to be pursued across existing and fluid boundaries between psychology and other behavioural sciences like physiology pharmacology sociology ethology and linguistics The central idea of this book is that biology and particularly evolution provides the best starting point for the study of emotion In particular it is argued that all the conventional properties of emotion such as expression feeling and motivation can be considered in a scientific manner and useful conclusions drawn therefrom The major part of the book involves the application of this central idea to a wide variety of the phenomena of emotion The resultant review should be useful as an undergraduate text and so explanations in the text are aimed at the non specialist At the same time the specific conclusions drawn in the book should be of interest to all those who do research on emotion and particularly those who need a solid framework on which to base interdisciplinary studies Biology and Emotion differs from the majority of books in the field in that it does not present a specific theory of emotion The material covered is therefore more general than is often the case and has not been selected to support a particular point of view It combines an organised yet artheoretical approach with coverage of both animal and human emotions      *Books in Series*, 1985 Vols for 1980 issued in three parts Series Authors and Titles      **Cognitive Biology** Gennaro Auletta, 2011-07-14 In particular it is shown that this activity is grounded on a theory of information based on Bayesian

science and the history of philosophy of science as well as to the craving for history and or theory in the theoretical biological disciplines In addition however it also provides inspiration for a broader image of philosophy of biology in which these traditional issues may have a place The volume devotes specific attention to the work of Georges Canguilhem which is central to this alternative tradition of continental philosophy of biology This is the first collection on Georges Canguilhem and the Continental tradition in philosophy of biology The book should be of interest to philosophers of biology continental philosophers historians of biology and those interested in broader traditions in philosophy of science [Subject Catalog](#)

Library of Congress, **Human Learning: Biology, Brain, and Neuroscience** Aaron S. Benjamin,J. Steven de Belle,Bruce Etnyre,Thad A. Polk,2008-08-15 Human learning is studied in a variety of ways Motor learning is often studied separately from verbal learning Studies may delve into anatomy vs function may view behavioral outcomes or look discretely at the molecular and cellular level of learning All have merit but they are dispersed across a wide literature and rarely are the findings integrated and synthesized in a meaningful way Human Learning Biology Brain and Neuroscience synthesizes findings across these levels and types of learning and memory investigation Divided into three sections each section includes a discussion by the editors integrating themes and ideas that emerge across the chapters within each section Section 1 discusses general topics in human learning and cognition research including inhibition short term and long term memory verbal memory memory disruption and scheduling and learning Section 2 discusses cognitive neuroscience aspects of human learning Coverage here includes models skill acquisition declarative and non declarative memory age effects on memory and memory for emotional events Section 3 focuses on human motor learning This book is suitable for cognitive neuroscientists cognitive psychologists kinesthesiologists and graduate courses in learning Synthesizes research from a variety of disciplines levels and content areas Provides section discussions on common findings between chapters Covers motor and verbal learning *Slacking* Adam Kissel,Rachel Alexander Cambre,Madison Marino Doan,2025-05-06 Prestige no longer ensures substance at Ivy League schools students must navigate a maze of shallow politicized courses to uncover the rare gems of a classical education exposing the need for academic renewal This book is a banquet of the absurdities that Ivy League universities serve up to their students under the rubric of general education Anyone who wonders how the graduates of America s elite institutions come by their jaundiced view of our country should start here The few who refuse to slack are limited to the hard sciences and the few remaining excellent courses in the humanities Peter Wood President National Association of Scholars Ivy League universities can no longer be trusted to produce well educated students Even a cursory review of the course titles at top schools shows that these 320 000 plus diplomas may confer legacy prestige to graduates but not necessarily knowledge or wisdom At Cornell for example students can take Queer Girlhood Beyonc Nation and Intersectional Disability Studies The course list at Yale includes Pop Sapphism and Comparative Settler Geographies At Princeton Shoes Penn offers Reality TV and Gender and Decolonizing French Food Even worse these courses actually fulfill
