Doing Psychology Experiments David W. Martin, 1985 Learn how to design execute interpret and report on simple psychology experiments David W Martin blends humor clear instruction and solid scholarship to make this concise text a perfect introduction to research methods in psychology DOING PSYCHOLOGY EXPERIMENTS guides you through the experimentation process in a step by step manner Martin emphasizes the decision making aspects of research as well as the logic behind research procedures He also devotes two separate chapters to many of the ethical questions that confront new experimenters giving you a complete introduction to the psychology laboratory *Experiments in Psychology* William Silliman Foster, 1923 **Classic Experiments in Psychology** Douglas G. Mook, 2004-12-30 The typical survey course in psychology has time for only limited presentation of the research on which our knowledge is based As a result many students come away with a limited understanding of the role of experiments in psychological science Where do experiments come from and how are they conducted What are the pitfalls and how can we avoid them What advantages do they have over intuition authority and common sense as guides to knowing and acting What distinguishes research based psychology from psychobabble What have we learned from experimentation in psychology This book presents in more depth than textbook treatment permits the background conduct and implications of a selection of classic experiments in psychology The selection is designed to be diverse showing that even for research in vastly different areas of study the logic of research remains the same as do its traps and pitfalls This book will broaden and deepen the understanding of experimental methods in psychological research examining where the research questions come from how questions can be turned into experiments and how researchers have faced the problems presented by research in psychology **Experimental Psychology** Edward Bradford Titchener, 1918 The general purpose with which this book has been written is sufficiently indicated by its title I have selected a number of the classical experiments of Experimental Psychology and have tried to present them in such a way that their performance shall have a real disciplinary value for the undergraduate student Within this general purpose my aim has been two fold I have sought to show in the first place that psychology is above the laboratory that we employ our instruments of precision not for their own sake but solely because they help us to a refined and more accurate introspection And secondly just as in my Outline of Psychology and Primer of Psychology I gave the results of experimentation a prominent place in the psychological system so here I have treated the selected experiments not as separate exercises but as points of departure for systematic discussion PsycINFO Database Record c 2005 APA all rights reserved *Experimentation in Psychology* Benton J. and The Sickness unto Death scholarship on the edifying discourses is still at the pioneering stage In an effort to bring this other neglected half of Kierkegaard's authorship into focus this volume of the Yearbook is dedicated specifically to the edifying discourses from 1843-44 and to Three Discourses on Imagined Occasions from 1845 It features articles from leading international scholars on various aspects of these discourses which are explored from literary philosophical and theological perspectives A series of articles has also been included on the history of reception of these edifying discourses in the various countries and language groups The Yearbook also includes individual sections containing papers from recent international seminars on Kierkegaard's thought One section provides a glimpse into the most recent work from the rich tradition of French Kierkegaard research Another section includes leading papers from recent Hungarian Kierkegaard scholarship These contributions serve to make this number of the Yearbook the most international to date and are proof of the growing interest in international Kierkegaard research Experimental Psychology: Quantitative experiments: pt. 1. Morawski, 1988 Laboratory experiments are the principal tools used by psychologists to formulate and test their theories of how the human mind works yet few histories of psychology have studied the experimental method and how it has changed over time In this book then distinguished scholars explore the rapid rise and spread of the experimental method from its origins in the early decades of the century They deal with such topics as the first efforts to bring number and quantification into psychology who the subjects of early experiments were and how experimenters and subjects related to each other famous psychologists such as Lewis Terman and Edward Titchener and how experimental strategies were extended beyond the laboratory to the larger spaces of everyday life The book concludes with two essays that discuss contemporary concerns regarding psychological experimentation The Kierkegaardian Mind Adam Buben, Eleanor Helms, Patrick
