Experiments In Gothic Structure:

Experiments in Gothic Structure Robert Mark, 1982 This fascinating study of the structural elements of Gothic cathedrals is written by an engineer who has spent the last 15 years applying analytical techniques of structural mechanics to Gothic buildings

Experiments in Gothic Structure Robert Mark, 1984-01 This fascinating study of the structural elements of Gothic cathedrals is written by an engineer who has spent the last 15 years applying analytical techniques of structural mechanics to Gothic buildings Like a detective he uses these techniques to solve continuing historical arguments about whether flying buttresses hold the roof up or are merely decorative whether ornate pinnacles atop piers are structurally necessary or purely aesthetic whether the ribs of the vaults hold up the ceiling as is generally believed whether the cathedral at Chartres deserves its place in history as the height of innovative medieval design

Masons, Tricksters and Cartographers David Turnbull, 2003-09-02 In an eclectic and highly original study Turnbull brings together traditions as diverse as cathedral building Micronesian navigation cartography and turbulence research He argues that all our differing ways of producing knowledge including science are messy spatial and local Every culture has its own ways of assembling local knowledge thereby creating space through the linking of people practices and places The spaces we inhabit and assemblages we work with are not as homogenous and coherent as our modernist perspectives have led us to believe rather they are complex and heterogeneous motleys

New Approaches to Medieval Architecture Robert Odell Bork, William W. Clark, Abby McGehee, 2011 The contributors to this book are among those at the forefront of the emergence of new critical perspectives and new technologies Several of the essays present dramatic reinterpretations of canonical monuments consider broader methodological issues such as the applications of geometry workshop practice and the shaping of historical narratives and others demonstrate how high tech scanning and visualization methods can enhance our understanding of construction methods and the behavior of buildings

Technology and Resource Use in Medieval Europe Michael Wolfe, Elizabeth Smith, 2021-12-16 The 10 essays here are the result of a conference devoted to the study of medieval technology in April 1995 Taken together they aim to help dispel the common misconception that medieval people somehow had to toil in a world bereft of technical innovation and ingenuity The authors of the papers all experts in their fields show the Middle Ages not only to be a time of considerable technological development but also the ways in which the technologies of building construction manufacture and metallurgy were shaped by broader forces of culture social identity political ambition and the local environment

On the Aesthetics of Architecture Ralf Weber, 2024-11-07 Originally published in 1995 as part of the Ethnoscapes Current Challenges in the Environmental Social Sciences series reissued now with a new series introduction *On the Aesthetics of Architecture* is a result of an interdisciplinary study in architectural theory psychology and philosophy and the author's experience as a practicing architect It tries to relate theories of aesthetics and recent advances in the psychology of visual perception to the practice of design The text starts with an analysis of traditional

and contemporary schools of thought in architectural theory and then proceeds through the formulation of a general theory of aesthetics based on perceptual and cognitive information processing to a description of the actual conditions under which aesthetic experiences of buildings and cities take place It exemplifies principles of aesthetic appropriateness through an analysis of architectural space and form Weber's book attempts to move the discussion of architectural aesthetics beyond the shifting doctrines of style and the often ambiguous dicta of critics While the author makes no claim that his interpretation of psychological research will result in good architecture he does insist on the need to bring the discussion of form back to more objective grounds As such it provided a valuable teaching resource and an important new contribution to the discussion among architects themselves as well as between psychologists philosophers and art theorists at the time *Structural Analysis of Historical Constructions* ,1997 **Understanding Architecture** Leland M. Roth,2018-03-13 This widely acclaimed beautifully illustrated survey of Western architecture is now fully revised throughout including essays on non Western traditions The expanded book vividly examines the structure function history and meaning of architecture in ways that are both accessible and engaging **Experiments with Fertilizers** James H. Stewart,Horace Atwood,1908 The Aesthetics of Scientific Experiments Milena Ivanova,Alice Murphy,2023-06-16 The relationship between aesthetics and science has begun to generate substantial interest However for the most part the focus has been on the beauty of theories and other aspects of scientific practice have been neglected This book offers a novel perspective on aesthetics in experimentation via ten original essays from an interdisciplinary group comprised of philosophers historians of science and art and artists The collection provides an analysis of the concept of beauty in the evaluation of experiments What properties do practising experimenters value How have the aesthetic properties of scientific experiments changed over the years Secondly the volume looks at the role that aesthetic factors including negative values such as ugliness as well as experiences of the sublime and the profound play in the construction of an experiment and its reception Thirdly the chapters provide in depth historical case studies from the Royal Society which also allows for a study of the depiction of scientific experiment in artworks as well as contemporary examples from the Large Hadron Collider and cases of experiments designed by artificial intelligence Finally it offers an exploration of the commonalities between how we learn from experiments on the one hand and the cognitive value of artworks on the other The Aesthetics of Scientific Experiments will be of interest to researchers and advanced students working in philosophy and history of science philosophy and history of art as well as practising scientists and science communicators Structural Analysis of Historical Constructions - 2 Volume Set Claudio Modena,P.B. Lourenço,P. Roca,2018-10-30 Structural Analysis of Historical Constructions contains about 160 papers that were presented at the IV International Seminar on Structural Analysis of Historical Constructions that was held from 10 to 13 November 2004 in Padova Italy Following publications of previous seminars that were organized in Barcelona Spain 1995 and 1998 and Guimar es Portugal 2001 state of the art information is presented in these two volumes on the preservation protection and

restoration of historical constructions both comprising monumental structures and complete city centers These two proceedings volumes are devoted to the possibilities of numerical and experimental techniques in the maintenance of historical structures In this respect the papers originating from over 30 countries are subdivided in the following areas Historical aspects and general methodology Materials and laboratory testing Non destructive testing and inspection techniques Dynamic behavior and structural monitoring Analytical and numerical approaches Consolidation and strengthening techniques Historical timber and metal structures Seismic analysis and vulnerability assessment Seismic strengthening and innovative systems Case studies Structural Analysis of Historical Constructions is a valuable source of information for scientists and practitioners working on structure related issues of historical constructions *AIA Journal* American Institute of Architects,1982 The Grove Encyclopedia of Medieval Art and Architecture Colum Hourihane,2012 This volume offers unparalleled coverage of all aspects of art and architecture from medieval Western Europe from the 6th century to the early 16th century Drawing upon the expansive scholarship in the celebrated Grove Dictionary of Art and adding hundreds of new entries it offers students researchers and the general public a reliable up to date and convenient resource covering this field of major importance in the development of Western history and international art and architecture Journal of the Society of Architectural Historians Society of Architectural Historians,1997 Includes special issues The Gothic and the Everyday L. Piatti-Farnell,M. Beville,2014-10-16 The Gothic and the Everyday aims to regenerate interest in the Gothic within the experiential contexts of history folklore and tradition By using the term living this book recalls a collection of experiences that constructs the everyday in its social cultural and imaginary incarnations **The Engineering of Medieval Cathedrals** Lynn Courtenay,2016-12-05 The great cathedrals and churches of the medieval West continue to awe How were they built and why do they remain standing What did their builders know about what they were doing These questions have given rise to considerable controversy which is fully reflected in the papers selected here The first section of the book is concerned with the medieval builders and their design methods the second focuses on engineering issues in the context of the infamous collapse of the choir at Beauvais in 1284 The following papers extend the analysis into the 15th century looking for example at Brunelleschi s dome for Florence Cathedral and deal with the often neglected structures of roofs towers and spires Innovative tools and design strategies. The case of Eclectic Architecture in Buenos Aires Garrido, Federico Andrés,2023-05-26 The research deals with a question about Architecture and its design strategies combining historical information and digital tools Design strategies are historically defined they rely on geometry context building technologies and other factors The study of Architecture s own history particularly in the verge of technological advancements like the introduction of new materials or tools may shed some light on how to internalize digital tools like parametric design and digital fabrication **Notices of the Proceedings at the Meetings of the Members of the Royal Institution of Great Britain** Royal Institution of Great Britain,1866 **Notices of the Proceedings at the Meetings of**
