Molecular Electronics: An Introduction To Theory And Experiment Elke Scheer, Juan Carlos Cuevas, 2010-06-23

This book provides a comprehensive overview of the rapidly developing field of molecular electronics. It focuses on our present understanding of the electrical conduction in single molecule circuits and provides a thorough introduction to the experimental techniques and theoretical concepts. It will also constitute as the first textbook like introduction to both the experiment and theory of electronic transport through single atoms and molecules. In this sense this publication will prove invaluable to both researchers and students interested in the field of nanoelectronics and nanoscience in general. Molecular Electronics is self contained and unified in its presentation. It may be used as a textbook on nanoelectronics by graduate students and advanced undergraduates studying physics and chemistry. In addition included are previously unpublished material that will help researchers gain a deeper understanding into the basic concepts involved in the field of molecular electronics.

Molecular Electronics: An Introduction To Theory And Experiment (2nd Edition) Elke Scheer, Juan Carlos Cuevas, 2017-05-19. Molecular Electronics is self contained and unified in its presentation. It can be used as a textbook on nanoelectronics by graduate students and advanced undergraduates studying physics and chemistry. In addition included in this new edition are previously unpublished material that will help researchers gain a deeper understanding into the basic concepts involved in the field of molecular electronics.

Photonic, Electronic And Atomic Collisions, Invited Papers Of The Twentieth International Conference On The Physics Friedrich Aumayr, Hannspeter Winter, 1998-05-30. This important book contains the invited papers, plenary and review lectures, progress and special reports presented at XX ICPEAC, the Twentieth International Conference on the Physics of Electronic and Atomic Collisions. It highlights the current status of research in photonic, electronic and atomic collision physics for which experimental studies increasingly rely on laser and synchrotron radiation and are more and more interrelated with other fields such as molecular and chemical physics, surface science, quantum optics and spectroscopy and formation of exotic atoms.

Desorption Induced by Electronic Transitions, DIET III Richard H. Stulen, Michael L. Knotek, 2013-03-08. These proceedings are the result of the third international workshop on Desorption Induced by Electronic Transitions, DIET III, which took place on Shelter Island, NY, May 20-22, 1987. The work contained in this volume is an excellent summary of the current status of the field and should be a valuable reference text for both seasoned researchers and newcomers in the field of DIET. Based on the success of the meeting, it seems clear that interest and enthusiasm in the field is strong. It is also apparent from the many lively discussions during the meeting that many unanswered questions and controversies remain to be solved. It was particularly pleasing to see many new participants from new and rapidly advancing fields ranging from gas phase dynamics to semiconductor processing. The resulting cross fertilization from these separate but related fields is playing an important role in helping us understand desorption processes.

at solid surfaces In general the topics covered during the course of the workshop overlapped those of both DIET I and DIET II However clear advances have been made and in general there is a much more sophisticated understanding of the physics and chemistry of stimulated desorption Of particular note in this regard is the gas phase research highlighted in this workshop by the work of Nenner et al where new results indicate that in the gas phase photodissociation can precede or compete strongly with autoionization and other electronic relaxation pathways

Heating in Toroidal Plasmas E. Canobbio, 2013-10-02 Heating in Toroidal Plasmas II Volume 1 contains the proceedings of the 2nd Joint Grenoble Varenna International Symposium held in Como Italy on September 3 12 1980 The symposium provided a forum for reviewing the status of heating of toroidal plasmas as a means of creating a practically inexhaustible source of energy with maximum safety and economy Topics covered range from plasma heating activities in countries such as Japan and the United States to electron cyclotron heating lower hybrid resonance and ion cyclotron heating Comprised of 62 chapters this volume first looks at radio frequency heating efforts in the European Community as well as heating of toroidal plasmas in the United States and Japan along with fusion research in China The next section is devoted to electron cyclotron heating paying particular attention to its theoretical aspects and presenting the results of experiments using the Tokamak and the CLEO stellarator Subsequent chapters deal with the feasibility of igniting a thermonuclear plasma with lower hybrid heating theory of lower hybrid heating in Tokamaks plasma heating experiments in lower hybrid frequency range and mode conversion and wave damping in the low frequency range The excitation and propagation of the fast wave in a two component non uniform plasma are also explored This monograph will be of interest to practitioners and research workers engaged in plasma physics

Conical Intersections: Theory, Computation And Experiment Michael S Schuurman, Wolfgang Domcke, David R Yarkony, Horst Koppel, 2011-11-04 The concept of adiabatic electronic potential energy surfaces defined by the Born Oppenheimer approximation is fundamental to our thinking about chemical processes Recent computational as well as experimental studies have produced ample evidence that the so called conical intersections of electronic energy surfaces predicted by von Neumann and Wigner in 1929 are the rule rather than the exception in polyatomic molecules It is nowadays

increasingly recognized that conical intersections play a key mechanistic role in chemical reaction dynamics This volume provides an up to date overview of the multi faceted research on the role of conical intersections in photochemistry and photobiology including basic theoretical concepts novel computational strategies as well as innovative experiments The contents and discussions will be of value to advanced students and researchers in photochemistry molecular spectroscopy and related areas *Bulletin - Engineering Experiment Station* Purdue University. Experiment and Theory E. Kochanski,2012-12-06 The scope of this paper is to recall fundamental notions of the molecular spectroscopy and dynamics necessary for discussion of photophysical and photochemical processes in condensed phases We will thus treat in a more detailed way the specific features which are important for molecular systems strongly interacting with their environment Other aspects such as the time evolution of isolated molecules single level excitation and state to state chemistry important for the gas phase photophysics are omitted We start Sec 2 with a brief description of radiative processes light absorption and emission in molecules In the quantum mechanical treatment of this problem the appropriate basis is that of so called zero order states corresponding to the traditional scheme of electronic states singlets doublets triplets etc and vibrational levels belonging to each state The important point will be deduction of selection rules for most radiative transitions At this stage all molecular states are considered as stationary states In order to treat the breakdown of simple selection rules and non radiative transitions between individual molecular states it is necessary to take into account the mechanisms coupling the zero order states Sec 3 We will first focus on intramolecular coupling effects and then discuss the solvent effects on intramolecular relaxation processes The problem of the non radiative transfer of the electronic energy between different molecules closely related to that of the energy dissipation within a single molecule will be treated in Sec 4 Active Experiments in Space: Past, Present, and Future Gian Luca Delzanno,Joseph Eric Borovsky,Evgeny V.
