Cope,2004-01-30 *Virtual Music* is about artificial creativity Focusing on the author s Experiments in Musical Intelligence
computer music composing program the author and a distinguished group of experts discuss many of the issues surrounding
the program including artificial intelligence music cognition and aesthetics The book is divided into four parts The first part
provides a historical background to Experiments in Musical Intelligence including examples of historical antecedents
followed by an overview of the program by Douglas Hofstadter The second part follows the composition of an Experiments in
Musical Intelligence work from the creation of a database to the completion of a new work in the style of Mozart It includes
in sophisticated lay terms relatively detailed explanations of how each step in the process contributes to the final composition
The third part consists of perspectives and analyses by Jonathan Berger Daniel Dennett Bernard Greenberg Douglas R
Hofstadter Steve Larson and Eleanor Selfridge Field The fourth part presents the author s responses to these commentaries
as well as his thoughts on the implications of artificial creativity The book and corresponding Web site includes an appendix
providing extended musical examples referred to and discussed in the book including composers such as Scarlatti Bach
Mozart Beethoven Schubert Chopin Puccini Rachmaninoff Prokofiev Debussy Bartok and others It is also accompanied by a
CD containing performances of the music in the text *Horizons (After Cope)* David Cope,Experiments in

result of a three year research project which investigated the creative act of composing by means of algorithmic composition Central to the investigation are the compositional strategies of 12 composers which were documented through a dialogic and cyclic process of modelling and evaluating musical materials The aesthetic premises and compositional approaches configure a rich spectrum of diverse positions which is reflected also in the kinds of approaches and methods used These approaches and methods include the generation and evaluation of chord sequences using genetic algorithms the application of morphing strategies to research harmonic transformations an automatic classification of personal preferences via machine learning and an application of mathematical music theory to the analysis and resynthesis of musical material The second part of the book features contributions by Sandeep Bhagwati William Brooks David Cope Darla Crispin Nicolas Donin and Guerino Mazzola These authors variously consider the project from different perspectives offer independent approaches or provide more general reflections from their respective research fields

Musical Creativity Irène Deliège, Geraint A. Wiggins, 2006-10-16 This collection initiates a resolutely interdisciplinary research dynamic specifically concerning musical creativity Creativity is one of the most challenging issues currently facing scientific psychology and its study has been relatively rare in the cognitive sciences especially in artificial intelligence This book will address the need for a coherent and thorough exploration Musical Creativity Multidisciplinary Research in Theory and Practice comprises seven sections each viewing musical creativity from a different scientific vantage point from the philosophy of computer modelling through music education interpretation neuroscience and music therapy to experimental psychology Each section contains discussions by eminent international specialists of the issues raised and the book concludes with a postlude discussing how we can understand creativity in the work of eminent composer Jonathan Harvey This unique volume presents an up to date snapshot of the scientific study of musical creativity in conjunction with ESCOM the European Society for the Cognitive Sciences of Music Describing many of the different aspects of musical creativity and their study it will form a useful springboard for further such study in future years and will be of interest to academics and practitioners in music psychology cognitive science artificial intelligence neuroscience and other fields concerning the study of human cognition in this most human of behaviours

Hidden Structure David Cope, 2009-06-01 Today's computers provide music theorists with unprecedented opportunities to analyze music more quickly and accurately than ever before Where analysis once required several weeks or even months to complete often replete with human errors computers now provide the means to accomplish these same analyses in a fraction of the time and with far more accuracy However while such computer music analyses represent significant improvements in the field computational analyses using traditional approaches by themselves do not constitute the true innovations in music theory that computers offer In Hidden Structure Music Analysis Using Computers David Cope introduces a series of analytical processes that by virtue of their concept and design can be better and in some cases only accomplished by computer programs thereby presenting unique opportunities for music theorists to understand more

thoroughly the various kinds of music they study Following the introductory chapter that covers several important premises Hidden Structure focuses on several unique approaches to music analysis offered by computer programs While these unique approaches do not represent an all encompassing and integrated global theory of music analysis they do represent significantly more than a compilation of loosely related computer program descriptions For example Chapter 5 on function in post tonal music firmly depends on the scalar foundations presented in chapter 4 Likewise chapter 7 presents a multi tiered approach to musical analysis that builds on the material found in all of the preceding chapters In short Hidden Structure uniquely offers an integrated view of computer music analysis for today s musicians

Ecologies of Creative Music

Practice Matthew Lovett,2023-12-13 Ecologies of Creative Music Practice Mattering Music explores music as a dynamic practice embedded in contemporary ecological contexts one that both responds to and creates change within the ecologies in which it is created and consumed This highly interdisciplinary analysis includes theoretical and practical considerations from blockchain technology and digital platform commerce to artificial intelligence and the future of work to sustainability and political ecology as well as contemporary philosophical paradigms guiding its investigation through three main lenses How can music work as a conceptual tool to interrogate and respond to our changing global environment How have transformations in our digital environment affected how we produce distribute and consume music How does music relate to matters of political ecology and environmental change Within this framework music is positioned as a starting point from which to examine a range of contexts and environments offering new perspectives on contemporary technological and ecological discourse Ecologies of Creative Music Practice Mattering Music is a valuable text for advanced undergraduates postgraduates researchers and practitioners concerned with producing performing sharing and listening to music

Algorithmic Composition Gerhard Nierhaus,2009-08-28 Algorithmic composition composing by means of formalizable methods has a century old tradition not only in occidental music history This is the first book to provide a detailed overview of prominent procedures of algorithmic composition in a pragmatic way rather than by treating formalizable aspects in single works In addition to an historic overview each chapter presents a specific class of algorithm in a compositional context by providing a general introduction to its development and theoretical basis and describes different musical applications Each chapter outlines the strengths weaknesses and possible aesthetical implications resulting from the application of the treated approaches Topics covered are markov models generative grammars transition networks chaos and self similarity genetic algorithms cellular automata neural networks and artificial intelligence are covered The comprehensive bibliography makes this work ideal for the musician and the researcher alike

432 Hz The Musical Revolution

Riccardo Tristano Tuis,2025-02-04 Being the outcome of years of research the book outlines the connection between music and the science of intonation leading the reader through the ancient wisdom of Pythagoras Fibonacci Leonardo da Vinci and Johannes Kepler up to the most modern research of quantum physics and neuroscience The author shows how the fixed tuning to A at 440 hertz

was an arbitrary choice imposed by a few influential people without providing any convincing reason or artistic proof to support it. This imposition has moved us away from the natural tuning of 432 Hz which is linked to the earth's resonance. Thanks to this book you will become aware of which brain areas music activates and at which octaves of frequency the human brain operates what role sound waves play in modifying blood pressure respiration heartbeat electrical resistance of the skin neuroendocrine response concentration and other essential components for human well being. It is one of the most comprehensive works published on the subject of intonation.

The AI Music Problem Christopher W. White, 2025-06-16
 Music poses unique and complex challenges for artificial intelligence even as 21st century AI grows ever more adept at generating compelling content. *The AI Music Problem: Why Machine Learning Conflicts With Musical Creativity* probes the challenges behind AI-generated music with an investigation that straddles the technical, the musical, and the aesthetic. Bringing together the perspectives of the humanities and computer science, the author shows how the difficulties that music poses for AI connect to larger questions about music, artistic expression, and the increasing ubiquity of artificial intelligence. Taking a wide view of the current landscape of machine learning and Large Language Models, *The AI Music Problem* offers a resource for students, researchers, and the public to understand the broader issues surrounding musical AI on both technical and artistic levels. The author breaks down music theory and computer science concepts with clear and accessible explanations, synthesizing the technical with more holistic and human-centric analyses. Enabling readers of all backgrounds to understand how contemporary AI models work and why music is often a mismatch for those processes, this book is relevant to all those engaging with the intersection between AI and musical creativity today.

Mass David Cope, *Experiments in Musical Intelligence*, 2015-09-17
 A Palestrina-style Mass composed by *Experiments in Musical Intelligence*, a computer program created by David Cope.

Tinman David Cope, 2008
 Offering insight into the creative processes of a contemporary composer, Tinman presents 150 vignettes from author David Cope's life. Some of the notable individuals discussed in this innovative biography are John Cage, Karlheinz Stockhausen, Pierre Boulez, Aaron Copland, Warren Zevon, Carl Sagan, Frank Drake, Douglas Hofstadter, Arthur Knight, Danny Glover, Steven Spielberg, George Lucas, Dorothy Freeman, Arthur C. Clarke, Isaac Asimov, and Philip José Farmer. Tinman offers a fond music journey including two encounters with Bach, Rachmaninoff's classic Prelude in C sharp minor, Beethoven's Fifth Symphony, Pierre Boulez, and the sadness of Igor Stravinsky's death. The title borrowed from L. Frank Baum's book *The Wizard of Oz* is an aphorism affectionately attached to Cope in the late 1990s. The reference reflects the many attitudes about his work with his computer music program *Experiments in Musical Intelligence*; critics felt the results of this program lack heart. Though Tinman covers many other aspects of Cope's life from his love of the cello to his days as a graduate student at the University of Southern California and to his work as a composer, author, and teacher, the main theme centers on his search for self-identity.
