Gautier,A.

Fieux, 2012-12-06 An Advanced Research Workshop ARW sponsored by NATO and the California Space Institute was held in Corsica France October 3 to 7 1983 to discuss the role of satellite observations in the large scale oceanographic experiments especially those under discussion e.g. the World Ocean Circulation Experiment WOCE and the Tropical Ocean and Global Atmosphere TOGA This volume is based on papers presented during that meeting summaries of the discussions of the working groups and recommended necessary tasks to be accomplished in preparation for WOCE and TOGA The participants of the meeting decided that although the collection of issues discussed in the meeting was undoubtedly incomplete the summaries of the discussions and recommended tasks warranted being conveyed to the organizers and sponsors of WOCE and TOGA Although not discussed at the workshop it was recognized that an important role of satellites is as data collection and location systems Some of the common conclusions of the different working groups discussions are that 1 Studies are needed of the sensitivity of the ocean response to errors in surface parameters wind stress heat flux SST etc in a variety of physical models These should be one of the basis for determining the accuracy requirements in WOCE and TOGA

Ocean Processes in Climate Dynamics P.M. Malanotte-Rizzoli, Allan R. Robinson, 2012-12-06 One of the most crucial but still very poorly understood topics of oceanographic science is the role of ocean processes in contributing to the dynamics of climate and global change This book presents a series of high level lectures on the major categories of ocean atmosphere processes Three of these major issues are the focus of the lectures 1 air sea interaction processes 2 water mass formation dispersion and mixing 3 general circulation with specific emphasis on the thermohaline component Global examples in the world ocean are provided and discussed in the lectures In parallel the Mediterranean Sea is a laboratory basin in providing analogues of the above global processes relevant to climate dynamics They include the Mediterranean thermohaline circulation with its own conveyor belt intermediate and deep water mass formation and transformations dispersion and mixing No other book in the field provides a review of fundamental lectures on these processes coupled with global examples and their Mediterranean analogues
