the geographical and chronological distribution of such goods are then used to provide a regional perspective for the operation of these workshops connections between them and further insights into the nature of local and international trade Finally the objects themselves can be used to assess the impact of trends such as the growing Egyptianization of the ruling classes of the Levant at this time

The Seven Wonders of the Ancient World Michael Denis Higgins, 2023 Covering a wide range of subjects this book connects each of the Seven Wonders to the science that made them possible and also led to their demise

Egyptology in the Present Carolyn Graves-Brown, 2015-06-01 This volume builds bridges between usually separate social groups between different methodologies and even between disciplines It is the result of an innovative conference held at Swansea University in 2010 which brought together leading craftspeople and academics to explore the all too often opposed practices of experimental and experiential archaeology The focus is upon Egyptology but the volume has a wider importance The experimental method is privileged in academic institutions and thus perhaps is subject to clear definitions It tends to be associated with the scientific and technological In opposition the experiential is more rarely defined and is usually associated with schoolchildren museums and heritage centres it is often criticised for being unscientific The introductory chapter of this volume examines the development of these traditionally assumed differences giving for the first time a critical and careful definition of the experiential in relation to the experimental The two are seen as points on a continuum with much common ground This claim is borne out by succeeding chapters which cover such topics as textiles woodworking and stoneworking And Salima Ikram Professor of Egyptology at the American University in Cairo here demonstrates remarkably that our understanding of the classic Egyptian funerary practice of mummification benefits from both scientific experimental and sensual experiential approaches The volume however is important not only for Egyptology but for archaeological method more generally The papers illuminate the pioneering of individuals who founded modern archaeological practice Several papers are truly groundbreaking and deserve to circulate far beyond Egyptology Thus the archaeologist Marquardt Lund tackles the problem of understanding the earliest known depictions of flint knife manufacture those from an Egyptian tomb dated around 1900 BC He shows the importance of thinking outside traditional i.e. modern knapping practice Lund's knapping method guided by the tomb depictions is surprising but effective and very different from that presented in manuals of lithic technology or taught in academic institutions
