**Models and Theories** Roman Frigg, 2022-06-28 Models and theories are of central importance in science and scientists spend substantial amounts of time building testing comparing and revising models and theories It is therefore not surprising that the nature of scientific models and theories has been a widely debated topic within the philosophy of science for many years The product of two decades of research this book provides an accessible yet critical introduction to the debates about models and theories within analytical philosophy of science since the 1920s Roman Frigg surveys and discusses key topics and questions including What are theories What are models And how do models and theories relate to each other The linguistic view of theories also known as the syntactic view of theories covering different articulations of the view its use of models the theory observation divide and the theory ladenness of observation and the meaning of theoretical terms The model theoretical view of theories also known as the semantic view of theories covering its analysis of the model world relationship the internal structure of a theory and the ontology of models Scientific representation discussing analogy idealisation and different accounts of representation Modelling in scientific practice examining how models relate to theories and what models are classifying different kinds of models and investigating how robustness analysis perspectivism and approaches committed to uncertainty management deal with multi model situations Models and Theories is the first comprehensive book length treatment of the topic making it essential reading for advanced undergraduates researchers and professional philosophers working in philosophy of science and philosophy of technology It will also be of interest to philosophically minded readers working in physics computer sciences and STEM fields more broadly

**The Castration of Oedipus** Joseph C. Smith, Carla J. Ferstman, 1996-03 The intellectual movements of psychoanalysis postmodernism and feminism have redefined the ways in which we think about human experience And yet an integration of these movements has been elusive if not impossible In this landmark book J C Smith and Carla J Ferstman combine these disparate traditions to create a provocative unified and tightly woven perspective that transcends the misogyny implicit in much of Freudian psychoanalytic theory The dialectics of domination and submission are central to Smith and Ferstman s argument Men and women they insist must avoid the temptation to fetishize equality and recognize the roles of domination and submission in the human psyche or in Nietzsche s terms the Will to Power They argue that the

unification of psychoanalysis postmodernism and feminism leads us to a shocking conclusion that women and men cannot move beyond the suffering which so haunts the human condition unless heterosexual men surrender the power that is causing their misery and affirm life by joyfully accepting domination by women And women conversely must reaffirm their power by rejecting Oedipal genderization and embracing a liberating matriarchal consciousness and a matriphallic sexuality A work of tremendous insight and extraordinary intellectual energy The Castration of Oedipus will provoke strong reactions in all readers regardless of ideology
