Explanation And Cognition:

Explanation and Cognition Frank C. Keil,Robert Andrew Wilson,2000 These essays address basic questions about explanation how do explanatory capacities develop are there kinds of explanation do explanations correspond to domains of knowledge why do we seek explanations and how central are causes to explanation *Understanding Representation in the Cognitive Sciences* Alexander Riegler,Markus Peschl,Astrid von Stein,2007-08-26 urrently a paradigm shift is occurring in for the conventional understanding of represen which the traditional view of the brain as tions The paper also summarizes the rationale for C representing the things of the world is the selection of contributions to this volume which challenged in several respects The present volume will roughly proceed from relatively realist c is placed at the edge of this transition Based on the ceptions of representation to more constructivist 1997 conference New Trends in Cognitive Sci interpretations The final chapter of discussions ence in Vienna Austria it tries to collect and in taped during and at the end of the conference p grate evidence from various disciplines such as p vides the reader with the possibility to reflect upon losophy of science neuroscience computational the different approaches and thus contributes to b approaches psychology semiotics evolutionary ter and more integrative understanding of their biology social psychology etc to foster a new thoughts and ideas understanding of representation The subjective experience of an outside world This book has a truly interdisciplinary character It seems to suggest a mapping process where environ is presented in a form that is readily accessible to mental entities are projected into our mind via some professionals and students alike across the cognitive kind of transmission While a profound critique of sciences such as neuroscience computer science this idea is nearly as old as philosophy it has gained philosophy psychology and sociology **Inference and Consciousness** Timothy Chan,Anders Nes,2019-12-20 Inference has long been a central concern in epistemology as an essential means by which we extend our knowledge and test our beliefs Inference is also a key notion in influential psychological accounts of mental capacities ranging from problem solving to perception Consciousness on the other hand has arguably been the defining interest of philosophy of mind over recent decades Comparatively little attention however has been devoted to the significance of consciousness for the proper understanding of the nature and role of inference It is commonly suggested that inference may be either conscious or unconscious Yet how unified are these various supposed instances of inference Does either enjoy explanatory priority in relation to the other In what way or ways can an inference be conscious or fail to be conscious and how does this matter This book brings together original essays from established scholars and emerging theorists that showcase how several current debates in epistemology philosophy of psychology and philosophy of mind can benefit from more reflections on these and related questions about the significance of consciousness for inference *The Computational Theory of Mind* Matteo Colombo,Gualtiero Piccinini,2023-11-29 The Computational Theory of Mind says that the mind is a computing system It has a long history going back to the idea that thought is a kind of computation Its modern incarnation relies on analogies with

contemporary computing technology and the use of computational models It comes in many versions some more plausible than others This Element supports the theory primarily by its contribution to solving the mind body problem its ability to explain mental phenomena and the success of computational modelling and artificial intelligence To be turned into an adequate theory it needs to be made compatible with the tractability of cognition the situatedness and dynamical aspects of the mind the way the brain works intentionality and consciousness **The Twenty-First Century Mechanistic Theory of Human Cognition** Diego Azevedo Leite,2020-11-30 This book presents a theoretical critical appraisal of the Mechanistic Theory of Human Cognition MTHC which is one of the most popular major theories in the contemporary field of cognitive science It analyses and evaluates whether MTHC provides a unifying account of human cognition and its explanation The book presents a systematic investigation of the internal and external consistency of the theory as well as a systematic comparison with other contemporary major theories in the field In this sense it provides a fresh look at more recent major theoretical debates in this area of scientific research and a rigorous analysis of one of its most central major theories Rigorous theoretical work is integrated with objective consideration of relevant empirical evidence making the discussions robust and clear As a result the book shows that MTHC provides a significant theoretical contribution for the field of cognitive science The content is useful for those interested in theoretical and empirical issues concerning major theories in the contemporary field of cognitive science *The Oxford Handbook of Thinking and Reasoning* Keith J. Holyoak,Robert G. Morrison,2013-05-23 The Oxford Handbook of Thinking and Reasoning brings together the contributions of many of the leading researchers in thinking and reasoning to create the most comprehensive overview of research on thinking and reasoning that has ever been available **Computation, Dynamics, and Cognition** Marco Giunti,1997-06-26 Currently there is growing interest in the application of dynamical methods to the study of cognition Computation Dynamics and Cognition investigates this convergence from a theoretical and philosophical perspective generating a provocative new view of the aims and methods of cognitive science Advancing the dynamical approach as the methodological frame best equipped to guide inquiry in the field s two main research programs the symbolic and connectionist approaches Marco Giunti engages a host of questions crucial not only to the science of cognition but also to computation theory dynamical systems theory philosophy of mind and philosophy of science In chapter one Giunti employs a dynamical viewpoint to explore foundational issues in computation theory Using the concept of Turing computability he precisely and originally defines the nature of a computational system sharpening our understanding of computation theory and its applications In chapter two he generalizes his definition of a computational system arguing that the concept of Turing computability itself is relative to the kind of support on which Turing machine operate Chapter three completes the book s conceptual foundation discussing a form of scientific explanation for real dynamical systems that Giunti calls Galilean explanation The book s fourth and final chapter develops the methodological thesis that all cognitive systems are dynamical systems On Giunti s view a dynamical approach

is likely to benefit even those scientific explanations of cognition which are based on symbolic models Giunti concludes by proposing a new modeling practice for cognitive science one based on Galilean models of cognitive systems Innovative lucidly written and broad ranging in its analysis Computation Dynamics and Cognition will interest philosophers of science and mind as well as cognitive scientists computer scientists and theorists of dynamical systems This book elaborates a comprehensive picture of the application of dynamical methods to the study of cognition Giunti argues that both computational systems and connectionist networks are special types of dynamical systems He shows how this dynamical approach can be applied to problems of cognition information processing consciousness meaning and the relation between body and mind **Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Language and Thought** ,2018-02-01 III Language discourse and dialogue reading creativity speech production concepts and categorization culture and cognition reasoning sentence processing bilingualism speech perception spatial cognition word processing semantic memory moral reasoning **What levels of explanation in the behavioural sciences?** Giuseppe Boccignone,Roberto Cordeschi,2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr s computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an approach to the role of the levels and explanation and models which is of interest for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science **Kazimierz Twardowski: A Grammar for Philosophy** Maria van der Schaar,2015-10-05 Kazimierz Twardowski 1866 1938 is the founder of the Lvov Warsaw School with its strong tradition in logic and its scientific approach to philosophy Twardowski s unique way of doing philosophy his method is of central importance for understanding his impact as a teacher This method can be understood as a philosophical grammar which is also how Leibniz conceived his universal language of thought Analytic philosophy in the twentieth century can be characterized by its opposition to psychologism on the one hand and its opposition to metaphysics on the other This is changing now as questions within the philosophy of mind and metaphysics are raised by analytic philosophers today Maria van der Schaar shows in her book that

we can improve our analytic methods by making use of Twardowski s philosophical grammar Twardowski s positive attitude to psychology and metaphysics may also help us to develop an analytic metaphysics and to get a better understanding of the relation between psychology and philosophy *Religious Cognition in China* Ryan G. Hornbeck,Justin L. Barrett,Madeleine Kang,2017-09-27 Are human tendencies toward religious and spiritual thoughts feelings and actions outcomes of natural cognition This volume revisits the naturalness theory of religious cognition through discussion of new qualitative and quantitative studies examining the psychological foundations of religious and spiritual expression in historical and contemporary China Naturalness theory has been challenged on the grounds that little of its supporting developmental and experimental research has drawn on participants from predominantly secular cultural environments Given China s official secularity its large proportion of atheists and its alleged long history of dominant nonreligious philosophies can any broad claim for religion s psychological naturalness be plausible Addressing this empirical gap the studies discussed in this volume support core naturalness theory predictions for human reasoning about supernatural agency intelligent design the efficacy of rituals and vitalistic causality And yet each study elucidates expands upon or even challenges outright the logical assumptions of the naturalness theory Written for a non specialist audience this volume introduces the naturalness theory and frames the significance of these new findings for students and scholars of cultural psychology the psychology of religion the anthropology of religion and Chinese Studies **The Philosophy of Cognitive Science** Mark J. Cain,2015-11-30 In recent decades cognitive science has revolutionised our understanding of the workings of the human mind Philosophy has made a major contribution to cognitive science and has itself been hugely influenced by its development This dynamic book explores the philosophical significance of cognitive science and examines the central debates that have enlivened its history In a wide ranging and comprehensive account of the topic philosopher M J Cain discusses the historical origins of cognitive science and its philosophical underpinnings the nature and role of representations in cognition the architecture of the mind and the modularity thesis the nature of concepts knowledge of language and its acquisition perception and the relationship between the brain and cognition Cain draws upon an extensive knowledge of empirical developments and their philosophical interpretation He argues that although the field has generated some challenging new views in recent years many of the core ideas that initiated its birth are still to be taken seriously Clearly written and incisively argued The Philosophy of Cognitive Science will appeal to any student or researcher interested in the workings of the mind Religion Explained? Luther H. Martin,Donald Wiebe,2017-09-21 With contributions from founders of the field including Justin Barrett E Thomas Lawson Robert N McCauley Paschal Boyer Armin Geertz and Harvey Whitehouse as well as from younger scholars from successive stages in the field s development this is an important survey of the first twenty five years of the cognitive science of religion Each chapter provides the author s views on the contributions the cognitive science of religion has made to the academic study of religion as well as any shortcomings in the field and challenges for the future Religion Explained The Cognitive

Science of Religion after Twenty five Years calls attention to the field whilst providing an accessible and diverse survey of approaches from key voices as well as offering suggestions for further research within the field This book is essential reading for anyone in religious studies anthropology and the scientific study of religion   *Mind as Motion* Robert F. Port,Timothy Van Gelder,1995 The first comprehensive presentation of the dynamical approach to cognition It contains a representative sampling of original current research on topics such as perception motor control speech and language decision making and development   *New Perspectives on Cybernetics* G. Vijver,2013-06-29 Gertrudis Van de Vijver Seminar of Logic and Epistemology University of Ghent Before being classified under the fashionable denominators of complexity and chaos self organization and autonomy were intensely inquired into in the cybernetic tradition Despite all rejections that cybernetics has gone through in the second half of this century today its importance is more and more recognized Its decisive influence for connectionist theories autopoietic and constructivist theories for different forms of applied or experimental epistemology is being more and more understood and generally accepted It is mainly due to the success of connectionist models that we observe today a revival of interest for cybernetics The 1943 article by McCulloch and Pitts is evidently a founding article Cybernetics has however a much broader interest than the one linked to technical mathematical details relevant to the construction of networks For instance the evolution from first to second order cybernetics the ways of approaching biological and cognitive phenomena in the latter and the limits that were formulated there are particularly meaningful to understand current developments and divergences in connectionism A nuanced picture of cybernetic s history and its present state is therefore clearly epistemologically essential   Conjunctive Explanations Jonah N. Schupbach,David H. Glass,2023-05-12 Philosophers and psychologists are increasingly investigating the conditions under which multiple explanations are better in conjunction than they are individually This book brings together leading scholars to provide an interdisciplinary and unified discussion of such conjunctive explanations The book starts with an introductory chapter expounding the notion of conjunctive explanation and motivating a multifaceted approach to its study The remaining chapters are divided into three parts Part I includes chapters on The Nature of Conjunctive Explanations Each chapter illustrates distinct ways in which explanatory multiplicity is motivated by a careful study of the nature and concept of explanation The second part Reasoning About Conjunctive Explanations includes chapters on the epistemology and logic of conjunctive explanations Here the contributors propose and evaluate various norms for reasoning correctly about and to conjunctive explanations Part III concerns The Psychology of Conjunctive Explanations with contributions discussing conditions under which humans entertain and hold multiple explanations of single explananda simultaneously and the cognitive limitations and capacities for doing so Conjunctive Explanations will be of interest to researchers and advanced students working on explanation in philosophy of science epistemology philosophical logic and cognitive psychology   **Epistemology and Cognition** J.H. Fetzer,2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge

information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interest from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental powers of other species to ideas related to artificial intelligence and computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimen tal and methodological studies will also appear from time to time The present volume reflects the kind of insights that can be obtained when research workers in philosophy artificial intelligence and computer science explore problems of common concern The issues here tend to fall into two broad but varied sets namely those concerned with content and concepts on the one hand and those concerned with semantics and epistemology on the other The collection begins with a prologue that focuses upon the relations between connectionism and alternative conceptions of nativism and ends with an epilogue that examines the significance of alternative conceptions of the Frame Problem for artificial intelligence Because these papers are rich and diverse they ought to appeal to a wide and heterogeneous audience J H F *The Journal of Philosophy* ,1908 Covers topics in philosophy psychology and scientific methods Vols 31 include A Bibliography of philosophy 1933 The Compact Compendium of Experimental Philosophy Alexander Max Bauer,Stephan Kornmesser,2023-11-20 The relatively new movement of Experimental Philosophy applies different systematic experimental methods to further illuminate classical philosophical issues This book brings together experts from the field to give the reader a compact yet extensive overview offering a ready at hand introduction to the state of the art **Rational Constructivism in Cognitive Development** ,2012-12-31 Volume 43 of Advances in Child Development and Behavior includes chapters that highlight some of the most recent research in the area of Rational Constructivism Each chapter provides in depth discussions and this volume serves as an invaluable resource for Developmental or educational psychology researchers scholars and students Chapters that highlight some of the most recent research in the area Rational Constructivism discussed in detail
