Siegel, 2013-11-12

There is growing interest among academics and policymakers in the economics of gambling which has been stimulated by major regulatory and tax changes in the U S U K Continental Europe Asia Australia and elsewhere Unfortunately there is no comprehensive source of path breaking research on this topic To fill this gap we commissioned chapters from leading economists on all aspects of gambling research Topics covered include the optimal taxation structure for various forms of gambling factors influencing the demand and supply of gambling services forecasting of gambling trends regulation of gambling the efficiency of racetrack and sports betting markets gambling prevalence and behavior modeling the demand for gambling services the economic impact of gambling substitution and complementarities among different types of gambling activity and the relationship between gambling and other sectors of the economy These are all important issues with significant global implications Specifically we divide the Handbook into sections on casinos sports betting horserace betting betting strategy motivation behavior and decision making in betting markets prediction markets and political betting and lotteries and gambling machines     *Stop the Violence in Latin America* Laura Chioda, 2017-06-19 The Latin America and Caribbean LAC region has the undesirable distinction of being the world's most violent region with 24.7 homicides per 100 000 inhabitants The magnitude of the problem is staggering and persistent Of the top 50 most violent cities in the world 42 are in LAC In 2010 alone 142 302 people in LAC fell victim to homicide representing 390 homicides per day and 4.06

homicides every 15 minutes Crime disproportionately affects young men aged 20 to 24 whose homicide rate of 92 per 100 000 nearly quadruples that of the region The focus of Crime Prevention in Latin America and the Caribbean is to identify policy interventions that whether by design or indirect effect have been shown to affect antisocial behavior early in life and patterns of criminal offending in youth and adults Particular attention is devoted to recent studies that rigorously establish a causal link between the interventions in question and outcomes This publication adopts a lifecycle perspective and argues that as individuals progress through different stages of the lifecycle not only do different sets of risk factors arise and take more prominence but their interactions and interdependencies shape human behavior These interactions and the relative importance of different sets of risk factors identify relevant margins that can effectively be targeted by prevention policies not only early in life but throughout the lifecycle Indeed prevention can never start too early nor start too late nor be too comprehensive     *Cheat to Win* Robert W.
