Exploitation Of Plant Resources In Ancient Africa:

The Exploitation of Plant Resources in Ancient Africa Marijke van der Veen, 1999-06-30 This volume presents a completely new and very substantial body of information about the origin of agriculture and plant use in Africa. All the evidence is very recent and for the first time all this archaeobotanical evidence is brought together in one volume. At present the information is unpublished or published in many disparate journals, conference reports, monographs, site reports, etc. Early publications concerned with the origins of African plant domestication relied almost exclusively on inferences made from the modern distribution of the wild progenitors of African cultivars; there existed virtually no archaeobotanical data at that time. Even as recently as the early 1990s, direct evidence for the transition to farming and the relative roles of indigenous versus Near Eastern crops was lacking for most of Africa. This volume changes that and presents a wide range of exciting new evidence, including case studies from Nigeria, Burkina Faso, Ethiopia, Uganda, Egypt, and Sudan, which range in date from 8000 BP to the present day. The volume addresses topics such as the role of wild plant resources in hunter-gatherer and farming communities, the origins of agriculture, the agricultural foundation of complex societies, long-distance trade, the exchange of foods and crops, and the human impact on local vegetation. All key issues of current research in archaeology, anthropology, agronomy, ecology, and economic history.

The Exploitation of Plant Resources in Ancient Africa M. van der Veen, 1999 *Archaeology of African Plant Use* Chris J. Stevens, Sam Nixon, Mary Anne Murray, Dorian Q. Fuller, 2016-07-01 The first major synthesis of African archaeobotany in decades, this book focuses on Paleolithic archaeobotany and the relationship between agriculture and social complexity. It explores the effects that plant life has had on humans as they evolved from primates through the complex societies of Africa, including Egypt, the Buganda Kingdom, southern African polities, and other regions. With over 30 contributing scholars from 12 countries and extensive illustrations, this volume is an essential addition to our knowledge of humanity's relationship with plants.

Plants and People in the African Past Anna Maria Mercuri, A. Catherine D'Andrea, Rita Fornaciari, Alexa Höhn, 2018-07-31 There is an essential connection between humans and plants, cultures and environments, and this is especially evident looking at the long history of the African continent. This book, comprising current research in archaeobotany on Africa, elucidates human adaptation and innovation with respect to the exploitation of plant resources. In the long-term perspective, climatic changes of the environment, as well as human impact, have posed constant challenges to the interaction between peoples and the plants growing in different countries and latitudes. This book provides an insight into the manifold routes people have taken in various parts of Africa in order to make a decent living from the provisions of their environment by bringing together the analyses of macroscopic and microscopic plant remains with ethnographic, botanical, geographical, and linguistic research. The numerous chapters cover almost all the continent's countries and were prepared by most of the scholars who study African archaeobotany, i.e. the complex and composite history of plant uses and environmental transformations during the Holocene.

The Oxford Handbook of African Archaeology Peter Mitchell, Paul Lane, 2013-07-04 Africa has the longest and arguably the most diverse archaeological record of any of the continents. It is where the human lineage first evolved and from where Homo sapiens spread across the rest of the world. Later it witnessed novel experiments in food production and unique trajectories to urbanism and the organisation of large communities that were not always structured along strictly hierarchical lines. Millennia of engagement with societies in other parts of the world confirm Africa's active participation in the construction of the modern world while the richness of its history, ethnography and linguistics provide unusually powerful opportunities for constructing interdisciplinary narratives of Africa's past. This Handbook provides a comprehensive and up to date synthesis of African archaeology covering the entirety of the continent's past from the beginnings of human evolution to the archaeological legacy of European colonialism. As well as covering almost all periods and regions of the continent it includes a mixture of key methodological and theoretical issues and debates and situates the subject's contemporary practice within the discipline's history and the infrastructural challenges now facing its practitioners. Bringing together essays on all these themes from over seventy contributors many of them living and working in Africa it offers a highly accessible contemporary account of the subject for use by scholars and students of not only archaeology but also history, anthropology and other disciplines.

Plant Foods of Greece Soultana Maria Valamoti, 2023-06-13 Greek archaeologist Soultana Maria Valamoti takes readers on a culinary journey in her synthesis of plant foods and culinary practices of Neolithic and Bronze Age Greece. Plant foods were the main ingredients of daily meals in prehistoric Greece and most likely of special dishes prepared for feasts and rituals. For more than thirty years Valamoti has been analyzing a large body of archaeobotanic data that spans 7 000 years from the Neolithic to Bronze Age and that was retrieved from nearly one hundred sites in mainland Greece and the Greek islands. This book also reflects experimentation and research of ancient written sources. Her approach allows an exploration of culinary variability through time. The thousands of charred seeds identified from occupation debris correspond to minuscule time capsules. She is able to document changes from the cooking of the first farmers to the sophisticated cuisines of the elites who inhabited palaces in the first cities of Europe in the south of Greece during the Late Bronze Age. Along the way she explains the complex processes for the addition of new ingredients such as millet and olives, condiments, sweet tastes and complex recipes. Ancient Grains also explores regional variability and diversity. Rich chapters are devoted to overviews of plant stuffs in their spatial and temporal distribution with ritual and symbolic significance noted and also to broader themes and practices. The main chapters are on bread, cereals, pulses, oils, fruit and nuts, fermented brews, healing foods, cooking and identity. Valamoti also offers insight into engaging in public archaeology and provides recipes that incorporate ancient plant ingredients and connect prehistory to the present in a critical way. Finally a thorough bibliography also includes archaeobotanical publications in Greek. Copious color and black and white photos enhance the text.
