Rediscovering the Hidden World Hamba Wanzola, 2012-11-30 When one has a purpose in life he shall find the means to achieve it and will not lose time to dream It requires determination God is the only who knows the destiny of each individual and we are very grateful to Him for creating me with a black skin and having filled me with His Spirit of truth and judgement to avoid doubt and fear which are the basis of all the troubles This Spirit has lived throughout our research and training in general That life has no draft Our research was painful because it is comparable to the pilgrimage of Jews on their way to the Promised Land The rains that fell on me are similar to the deluge Without realising it the distance I travelled across countries in search of knowledge before writing this book can be compared to a world tour on foot Writing a book is always the work of many hands and minds besides that of the authors This book is dedicated to the Lord God the Almighty source of all life Special thanks to my lovely wife and children for their amazing contributions to make

part of the hidden worlds visible to everyone Thanks to the brothers and sisters in the Lord for their prayers to friends and to the extended family near and far for their valuable contributions to make the hidden worlds possible Special thanks to Hannah Cordle Ray Russell Miles Cole Sam Pochen Wanza Maya and Dr Milwood PhD who have given me valuable suggestions throughout my book In particular thanks to the Kongolese diaspora interviewed and authors for their copyrights To my uncles it is time for me to say a big thank you To my parents with regret Marie Pady and Simon Ngangoma who sowed joy but are not alive to reap the harvest May their souls rest in eternal peace Vibrant tribute to all Kongolese heroes who died and continue to die for the nation in memory of so many years we shared together in Kongo we love and miss them deeply and will carry their spirit with us until the time we meet again

Motorbike People Will Rollason,2019-12-03 In *Motorbike People* Power and Politics on Rwandan Streets Will Rollason examines the relationship between power and culture Rollason looks at what social scientists gain and lose by abandoning the assumption that power is a universal feature of human social life Through an ethnographic account of the lives and livelihoods of motorcycle taxi drivers in Kigali Rwanda Rollason depicts how forms of personhood can sit uneasily with conventional accounts of power relationships From the motorcyclists everyday dealings with the police and each another to the regulation of their businesses at large and the Rwandan constitution Rollason depicts the need for varied concepts of power By allowing concepts of power to proliferate the social sciences lose the political capacity to engage in questions of justice and make common cause with the oppressed but gain the ability to rethink what it means to act politically and meet the challenges of a swiftly changing world This work is recommended for students and scholars of the social sciences

Enchantment Of Urania, The: 25 Centuries Of Exploration Of The Sky Massimo Capaccioli,2024-03-19 Today we know much about the sky how stars are born how they live and die and how the universe as a whole evolves We have learned of the existence of another type of matter indifferent to light and yet decisive for the formation of galaxies and we have a hint of a dark energy that since the last 4 5 billion years has taken over the control of the cosmos We postulated and then discovered and even photographed black holes and listened to the faint rustle of the space time ripple produced when these monsters devour each other We reached these astonishing results recognized by a bunch of Nobel Prizes and filling every day the media with wonders for the eyes and the mind by the marriage of physics and astronomy that unified the Earth with the sky and then by the leap forward of science and technology in the Twentieth Century This rich heritage has ancient roots It was built by accumulating discoveries with errors observations with fantasies myths and superstitions with flashes of genius over a span of millennia since Homo sapiens turning his eyes to the immutable and perfect sky began to ask questions The book is a narration of the answers to these questions that had evolved over time a

progressive path inserted in the general history with some second thoughts and many obstacles This is a saga of men and machines where greatness sometimes mixes with misery and passion often borders on sacrifice and even martyrdom Why should we know it Because our current knowledge is the result of these efforts and of the preconceptions that accompanied them The challenge has been to present this complex and intricate subject without resorting to any formulas so that it can be accessible to a wide audience of curious people including high school and university students and in general all those who normally keep themselves informed of scientific things A rich bibliography has also been added in the appendix for those wishing to learn more on one or more topics

Alessandro Piccolomini's Early Astronomical Works: I. An Exploration of Their Cultural Significance Kristen Lippincott, 2024-09-12 This book presents the first interdisciplinary study of Alessandro Piccolomini's two early astronomical works *De la Sfera del Mondo* and *De le Stelle Fisse* First published in Venice in 1540 the two treatises are amongst the earliest scientific texts written in the vernacular Italian and were specifically composed to make astronomical principles and practices available to a lay reader The book includes modern editions of the original Italian texts and an English translation of both treatises all appended as Electronic Supplementary Material to the online edition while also examining the contents of each treatise in depth It explores the way in which Piccolomini addresses the theoretical underpinnings of the science of astronomy in his *De la Sfera del Mondo* by providing a version of Sacrobosco's *De sphaera* which he has expanded and updated to include the views of more recent natural philosophers and astronomers The book also presents an extended study of *De le Stelle Fisse* and the unique method that Piccolomini devised for observing the stars as well as explanatory notes on the sources behind his explanations of the mythographic sources of each constellation In addition to this the book presents a detailed examination of the cultural context in which Piccolomini wrote his treatises focussing on such issues as how astronomy was taught in Italian universities in the 16th century the on going debates on the viability of Italian as language as a means for discussing scientific ideas and how Piccolomini navigated through the competitive and complicated world of book production in 16th century Venice Given that Piccolomini originally dedicated both treatises to his female friend the Sienease aristocrat Laudomia Forteguerra there is also a discussion of the mysteries behind their personal relationship of the dynamics of Sienease society at the time and in particular the role that the Sienease Accademia degli Intronati played in Piccolomini's own intellectual development and the composition of his astronomical treatises This book is a companion volume to Alessandro Piccolomini's *Early Astronomical Works II An Examination of Their Scientific Content* by Elly Dekker in the same series The two volumes are jointly available as print set with ISBN 978 3 031 76964 1

Modeling, Verification and Exploration of Task-Level Concurrency in Real-Time Embedded Systems Filip Thoen, Francky Catthoor, 2012-12-06 system is a complex object containing a significant percentage of electronics that interacts with the Real World physical environments humans etc through sensing and actuating devices A system is heterogeneous i.e. is characterized by the co-existence of a large number of components of disparate type and function for

example programmable components such as micro processors and Digital Signal Processors DSPs analog components such as A/D and D/A converters sensors transmitters and receivers Any approach to system design today must include software concerns to be viable In fact it is now common knowledge that more than 70% of the development cost for complex systems such as automotive electronics and communication systems are due to software development In addition this percentage is increasing constantly It has been my take for years that the so called hardware software co design problem is formulated at a too low level to yield significant results in shortening design time to the point needed for next generation electronic devices and systems The level of abstraction has to be raised to the Architecture Function co design problem where Function refers to the operations that the system is supposed to carry out and Architecture is the set of supporting components for that functionality The supporting components as we said above are heterogeneous and contain almost always programmable components
