Exploring Manufacturing R. Thomas Wright, 1985 **Manufacturing and Design** Erik Tempelman, Hugh Shercliff, Bruno Ninaber van Eyben, 2014-03-03 Manufacturing and Design presents a fresh view on the world of industrial production thinking in terms of both abstraction levels and trade offs The book invites its readers to distinguish between what is possible in principle for a certain process as determined by physical law what is possible in practice the production method as determined by industrial state of the art and what is possible for a certain supplier as determined by its production equipment Specific processes considered here include metal forging extrusion and casting plastic injection molding and thermoforming additive manufacturing joining recycling and more By tackling the field of manufacturing processes from this new angle this book makes the most out of a reader's limited time It gives the knowledge needed to not only create well producible designs but also to understand supplier needs in order to find the optimal compromise Apart from improving design for production this publication raises the standards of thinking about producibility Emphasizes the strong link between product design and choice of manufacturing process Introduces the concept of a production triangle to highlight tradeoffs between function cost and quality for different manufacturing methods Balanced sets of questions are included to stimulate the reader's thoughts Each chapter ends with information on the production methods commonly associated with the principle discussed as well as pointers for further reading Hints to chapter exercises and an appendix on long exercises with worked solutions available on the book's companion site <http://booksite.elsevier.com/9780080999227> **A**
