Diversity and Function in

Mangrove Ecosystems Richard Standiford, 2012-12-06 Mangroves are salt adapted plants that are found along many of the world's tropical and sub tropical coastlines Regrettably these plants are being lost due to over exploitation pollution conversion to agriculture and aquaculture and other causes This is having important consequences for local human populations that traditionally rely on this resource and is upsetting the fine balance needed to maintain this highly productive ecosystem This text brings together some papers from two recent international symposia on the mangrove ecosystem It provides an outline of future directions in mangrove research considered to be urgent by prominent mangrove scientists Contributions include aspects of population differentiation in mangrove species that have been very little studied so far ecological function and restoration and management of the mangrove ecosystem This book is intended for scientists actively working in the areas of mangrove ecology and management **The Irish Journal of Psychology**, 1991 British Book

Quantitative Methods in Tourism Rodolfo Baggio, Jane E.

Klobas, 2011 This book goes beyond the methods usually covered in introductory textbooks on quantitative methods in tourism It considers key issues in data selection approaches to factor and cluster analysis and regression before covering

advanced topics including structural equation modelling maximum likelihood estimation simulation and agent based modelling The result is a guide to quantitative methods in tourism that demystifies both simple and apparently complex techniques and makes them more accessible to tourism researchers *Workshop Statistics*: Allan J. Rossman, Beth L. Chance, 2013-12-01 Shorn of all subtlety and led naked out of the protective fold of educational research literature there comes a sheepish little fact lectures don't work nearly as well as many of us would like to think George Cobb 1992 This book contains activities that guide students to discover statistical concepts explore statistical principles and apply statistical techniques Students work toward these goals through the analysis of genuine data and through interaction with one another with their instructor and with technology Providing a one semester introduction to fundamental ideas of statistics for college and advanced high school students Workshop Statistics is designed for courses that employ an interactive learning environment by replacing lectures with hands on activities The text contains enough expository material to stand alone but it can also be used to supplement a more traditional textbook Some distinguishing features of Workshop Statistics are its emphases on active learning conceptual understanding genuine data and the use of technology The following sections of this preface elaborate on each of these aspects and also describe the unusual organizational structure of this text
