initiated by other large pharmaceutical companies including Hoffmann La Roche Novartis Eli Lilly and Johnson Johnson Orexins are increasingly recognized for orchestrating the activity of the organism's arousal system with appetite reward and stress processing pathways Therefore in addition to models of insomnia pharmacological effects of DORAs have begun to be investigated in rodent models of addiction depression and anxiety The first clinical trials in diabetic neuropathy migraine and depression have been initiated with Merck's MK 6096 www.clinicaltrials.gov Whereas the pharmacology of DORAs is established for their effects on wakefulness pharmacological effects of selective OX1 or OX2 antagonists SORAs have remained less clear From an evolutionary point of view the OX2 was expressed first in most vertebrate lineages whereas the OX1 is believed to result from a gene duplication event when mammals emerged Yet both receptors do not have redundant function Their brain expression pattern their intracellular signaling as well as their affinity for orexin A and orexin B differs During the past decade most preclinical research on selective OX1 antagonism was performed with SB 334867 Only in recent years other selective OX1 and OX2 antagonists with optimized selectivity profiles and pharmacokinetic properties have been discovered and phenotypes of OX1 and OX2 knockout mice were described The present Research Topic referred to in the Editorial as special topics issue comprises submissions of original research manuscripts as well as reviews directed towards the neuropharmacology of OX antagonists The submissions are preclinical papers dealing with dual and/or selective OX antagonists that shed light on the differential contribution of endogenous orexin signaling through both OXRs for cellular physiological and behavioral processes Some manuscripts also report on convergence or divergence of DORA vs SORA effects with phenotypes expressed by OX1 or OX2 knockout animals Ultimately these findings may help further define the potential of DORAs and SORAs in particular therapeutic areas in insomnia and beyond insomnia
