understanding monitoring and controlling processes in rural landscapes is being explained. Studies of international expert teams, many of them from Russia, demonstrate approaches towards both improving agricultural productivity and sustainability and enhancing ecosystem services of agricultural landscapes. Scientists of different disciplines, decision makers, farmers, and further informed people dealing with the evolvement of thriving rural landscapes are the primary audience of this book.

*Costa Rican Ecosystems* Maarten Kappelle, 2016-04-15. In the more than thirty years since the publication of Daniel H. Janzen's classic *Costa Rican Natural History*, research in this small but astonishingly biodiverse, well preserved and well studied Latin American nation has evolved from a species level approach to the study of entire ecosystems. And from the lowland dry forests of Guanacaste to the montane cloud forests of Monteverde, from the seasonal forests of the Central Valley to the coastal species assemblages of Tortuguero, Costa Rica has proven to be as richly diverse in ecosystems as it is in species. In *Costa Rican Ecosystems*, Maarten Kappelle brings together a collection of the world's foremost experts on Costa Rican ecology, outstanding scientists such as Daniel H. Janzen, Jorge Cortés, Jorge A. Jiménez, Sally P. Horn, Robert O. Lawton, Quirico Jiménez, M. Carlos Manuel Rodríguez, Catherine M. Pringle, and Eduardo Carrillo, among others, to offer the first comprehensive account of the diversity, structure, function, uses, and conservation of Costa Rica's ecosystems. Featuring a foreword and introductory remarks by two renowned leaders in biodiversity science and ecological conservation, Thomas E. Lovejoy and Rodrigo Gómez Lobo, in addition to chapters highlighting the geology, soils, and climate of Costa Rica, as well as the ecosystems of its terrestrial, freshwater, and marine habitats, and including previously unpublished information on Isla del Coco, this beautiful color illustrated book will be an essential reference for academic scientists, students, natural history guides, conservationists, educators, park guards, and visitors alike.

#### Deep-Sea Pycnogonids and Crustaceans of the Americas

Michel E. Hendrickx, 2021-03-01. Among the deep sea marine invertebrates, pycnogonids and crustaceans represent ecologically important and most diverse groups of species. Yet both are still poorly understood. Sampling and exploring operations off the west and east coast of the Americas has significantly increased in the last two decades. However, such operations are very costly and limited in number and frequency. In countries like Brazil, Canada, Chile, Colombia, Costa Rica, Mexico, Peru, the United States of America, and El Salvador, a large effort has been made to explore the deep sea resources and the rich diversity of the communities, resulting in a better understanding of the natural ecosystems on both coasts of America. Pycnogonids and many groups of deep sea crustaceans have been intensively studied from the smallest animals like the mostly unknown benthic copepods to the largest decapods. This book presents new and updated information on various groups of deep sea pycnogonids and crustaceans occurring off the American continent. Offering a valuable reference resource for scientists interested in this fascinating fauna, it includes review papers and new data on the deep sea communities occurring off the USA, Mexico, El Salvador, Costa Rica, Colombia, Chile, Peru, Brazil, and Argentina, as well as in larger areas in both the East Pacific and the West Atlantic. As such, it covers most of the current deep water research in Latin America.

**Translanguaging and Epistemological Decentring in Higher Education and Research** Heidi Bojsen, Petra Daryai-Hansen, Anne Holmen, Karen Risager, 2023-01-13 Using data from multilingual settings in universities and adjacent learning contexts in East Asia North Africa Central and North America and Europe this book provides examples of the heuristic value of translanguaging and epistemological decentring Despite this and other theoretical and empirical work and ever stronger calls for the inclusion of other languages epistemologies and constructions of culture in higher education decentring and translanguaging practices are often relegated to the margins or suppressed in research and education because of the organisational structures of education institutions and prevailing language norms policies and ideologies The authors draw on research on pluri and multilingualism within education studies as well as post and decolonial theoretical contributions to the research on the role of language in education and knowledge production to provide evidence that decentring cannot happen until learners have been given the tools to identify which sorts of centring dynamics and conditions are salient to their learning and trans languaging

**Experimentalisms in Practice** Ana R. Alonso-Minutti, Eduardo Herrera, Alejandro L. Madrid, 2018-01-02 Experimentalisms in Practice explores the multiple sites in which experimentalism emerges and becomes meaningful beyond Eurocentric interpretative frameworks Challenging the notion of experimentalism as defined in conventional narratives

contributors take a broad approach to a wide variety of Latin and Latin American music traditions conceived or perceived as experimental. The conversation takes as starting point the 1960s a decade that marks a crucial political and epistemological moment for Latin America. Militant and committed aesthetic practices resonated with this moment resulting in a multiplicity of artistic and musical experimental expressions. *Experimentalisms in Practice* responds to recent efforts to reframe and reconceptualize the study of experimental music in terms of epistemological perspective and geographic scope while also engaging traditional scholarship. This book contributes to the current conversations about music experimentalism while providing new points of entry to further reevaluate the field.

**Biodiversity and Conservation of Woody Plants** M. R. Ahuja, S. Mohan Jain, 2017-11-21 This book provides complete comprehensive and broad subject based reviews for students teachers researchers policymakers conservationists and NGOs interested in the biodiversity and conservation of woody plants. Forests cover approximately 31 percent of the world's total landmass. 93 percent is natural forest and only 7 percent consists of planted trees. Forest decline is progressing at an alarming rate worldwide. In addition to human activities logging deforestation and exploiting forest lands for agriculture and industrial use a number of other factors including pests and diseases drought soil acidity radiation and ozone are cumulatively contributing to global forest decline. The present situation forces us to focus on forest conservation strategies for the present and future. Gene conservation and maintaining genetic diversity in forest ecosystems are crucial to the preservation of forest genetic resources. This calls for integrated action to implement both the in situ on site preservation of forest stands and ex situ distant from the original site strategies for the conservation of woody plants genetic resources. Selected priority areas include 1 assessing patterns of genetic diversity and threats 2 understanding the biological processes regulating genetic diversity 3 assessing the impact of human activities and climate change on genetic diversity and 5 finding methods for prioritizing species and populations for the conservation of forest trees genetic resources. All chapters were written by leading scientists in their respective fields which include woody plant diversity ecology and evolution assessment of genetic diversity in forest tree populations conservation planning under climate change and in situ and ex situ strategies including biotechnological approaches for the conservation of woody plants genetic resources.
