Equivalence in Measurement Chester A. Schriesheim, Linda L. Neider, 2001-10-01 This volume highlights research and conceptual insights into one of the most basic and yet perplexing research issues in management handling and assessing the comparability of our measurement devices across groups and measures One of the most consistently difficult concerns in management research over the past three decades has been trying to reconcile measurement equivalence issues utilizing diverse samples Given the emphasis on diversity in the human resources area and the internationalization of business and management measurement equivalence is more of a general concern now than ever before If we are not able to successfully address concerns about measurement equivalence research examining differences between groups could be highly misleading and or erroneous Consequently we hope that the thoughtful contributions of the scholars in this volume will help future scholars to better address measurement equivalence concerns

Millsap, 2012-03-29 This book reviews the statistical procedures used to detect measurement bias Measurement bias is examined from a general latent variable perspective so as to accommodate different forms of testing in a variety of contexts including cognitive or clinical variables attitudes personality dimensions or emotional states Measurement models that underlie psychometric practice are described including their strengths and limitations Practical

strategies and examples for dealing with bias detection are provided throughout The book begins with an introduction to the general topic followed by a review of the measurement models used in psychometric theory Emphasis is placed on latent variable models with introductions to classical test theory factor analysis and item response theory and the controversies associated with each being provided Measurement invariance and bias in the context of multiple populations is defined in chapter 3 followed by chapter 4 that describes the common factor model for continuous measures in multiple populations and its use in the investigation of factorial invariance Identification problems in confirmatory factor analysis are examined along with estimation and fit evaluation and an example using WAIS R data The factor analysis model for discrete measures in multiple populations with an emphasis on the specification identification estimation and fit evaluation issues is addressed in the next chapter An MMPI item data example is provided Chapter 6 reviews both dichotomous and polytomous item response scales emphasizing estimation methods and model fit evaluation The use of models in item response theory in evaluating invariance across multiple populations is then described including an example that uses data from a large scale achievement test Chapter 8 examines item bias evaluation methods that use observed scores to match individuals and provides an example that applies item response theory to data introduced earlier in the book The book concludes with the implications of measurement bias for the use of tests in prediction in educational or employment settings A valuable supplement for advanced courses on psychometrics testing measurement assessment latent variable modeling and or quantitative methods taught in departments of psychology and education researchers faced with considering bias in measurement will also value this book
